Appendix P. Relevant Permitting Documentation

P.1 SWFWMD ERP Pre-Application Meeting Minutes

THIS FORM IS INTENDED TO FACILITATE AND GUIDE THE DIALOGUE DURING A PRE-APPLICATION MEETING BY PROVIDING A PARTIAL "PROMPT LIST" OF DISCUSSION SUBJECTS. IT IS NOT A LIST OF REQUIREMENTS FOR SUBMITTAL BY THE APPLICANT.

SOUTHWEST FLORIDA WATER MANAGEMENT DISTRICT
RESOURCE REGULATION DIVISION
PRE-APPLICATION MEETING NOTES

FILE NUMBER:

PA 412612

Date:	7/24/25		
Time:	11 am		
Project Name:	BAR PA 412612 - South Howard Flood Relief and Streetscape Project		
District Engineer:	Bob Dasta, Amber Smith		
District ES:	Russell Martin, John Clarke		
Attendees:	Brett Sillman, Amanda Serra, Christian Chandler, Cristina Jackson		
County:	Hillsborough	**Sec/Twp/Rge:**	26,27/29/18
Total Land Acreage:		**Project Acreage:**	Acres

Prior On-Site/Off-Site Permit Activity:

- ERP - 20724, 6550
- Pre App 404594

Project Overview:

- Comments provided - Project aims to alleviate roadway and structural flooding within the Parkland Estates and Palma Ceia Pines neighborhoods in South Tampa by constructing at least 5000 linear feet of new box culvert outfall to Hillsborough Bay
- W Swann Avenue at S Audubon Avenue
- If any localized closed basins (up to 100-year, 24-hour storm) are now being conveyed to the bay, address pollutant loading and may need treatment to ensure no increasing of pollutants to the bay.
- Tidal receiving waterbody
- THEA South Selmon Capacity Project. Taking in runoff from Albany Pond, Waltrous Ave overpass
- Taking some runoff that originally went to a pond today. Some of this runoff is to ERP permitted ponds (i.e., Swann Pond, etc). Will need to provide compensatory water quality treatment for this runoff which will now bypass its treatment pond and go to the bay.
- Anticipate submittal in spring 2026
- Discussed that South Selmon Capacity project currently under review (Application ID 915140) will be conditioned that construction cannot occur until permitting and construction of this trunkline project occurs. May modify current application for South Selmon to remove portion discharging to trunkline as we cannot transfer to operation portions of South Selmon separately.

Environmental Discussion: (Wetlands On-Site, Wetlands on Adjacent Properties, Delineation, T&E species, Easements, Drawdown Issues, Setbacks, Justification, Elimination/Reduction, Permanent/Temporary Impacts, Secondary and Cumulative Impacts, Mitigation Options, SHWL, Upland Habitats, Site Visit, etc.)

- FWC Manatee conditions for in water work. Possible surface water impacts from riprap installation at existing outfall into Hillsborough Bay.
- Provide the limits of jurisdictional wetlands and surface waters. Roadside ditches or other water conveyances, including permitted and constructed water conveyance features, can be claimed as surface waters per Chapter 62-340 F.A.C. if they do not meet the definition of a swale as stated under Rule 403.803 (14) F.S.
- Notice of changes to Florida Statues: Be advised that Senate Bill 492 provides changes to the Mitigation Banking statute and Senate Bill 180 provides changes to the tolling period of permits and formal determinations related to emergency orders.
  Link to Senate Bill 492: https://www.flsenate.gov/Session/Bill/2025/492/?Tab=BillText.
  Link to Senate Bill 180: https://www.flsenate.gov/Session/Bill/2025/180/?Tab=BillText .
- A site visit by District staff will be required to verify the presence or absence of wetlands and/or surface waters. Prior to the site visit, District staff will contact the applicant or authorized agent to provide an approximate date of the site visit and to ensure that the project area is accessible. If wetlands or surface waters are discovered during the site visit, additional information may be required. A site visit will not be scheduled until the appropriate signatures on the application and the fee is submitted.

- On February 15, 2024, the U.S. District Court for the District of Columbia issued a decision vacating the U.S. Environmental Protection Agency's approval of Florida's application to assume Clean Water Act Section 404 permitting responsibilities in certain waters in Florida. In light of this decision, the U.S. Army Corps of Engineers (USACE) is currently the only entity in the State of Florida with authority to issue permits under Section 404 of the Clean Water Act. The USACE recognizes that either the District Court or an Appellate Court may issue a full or partial stay of the February 15th order at some point. In the interim, applicants may submit applications to the USACE for activities involving the discharge of dredged or fill material into formerly state-assumed waters. The USACE will begin processing any applications it receives, however applicants and stakeholders should recognize the uncertainty surrounding the current litigation. Further information can be found at these two links:

  https://floridadep.gov/water/submerged-lands-environmental-resources-coordination/content/state-404-program

  https://www.saj.usace.army.mil/Missions/Regulatory/

Site Information Discussion: (SHW Levels, Floodplain, Tailwater Conditions, Adjacent Off-Site Contributing Sources, Receiving Waterbody, etc.)

- WBIDs need to be independently verified by the consultant
  - WBID 1609 discharges directly to Tampa Bay.
  - Tampa Bay is impaired for nutrients.
- Document/justify SHWE's at pond locations
- Stormwater retention and detention systems are classified as moderate sanitary hazards with respect to public and private drinking water wells. Stormwater treatment facilities shall not be constructed within 100 feet of an existing public water supply well and shall not be constructed within 75 feet of an existing private drinking water well. Subsection 4.2, A.H.V.II.
- Any wells on site should be identified and their future use/abandonment must be designated.

Water Quantity Discussions: (Basin Description, Storm Event, Pre/Post Volume, Pre/Post Discharge, etc.)

- Storage modeling will be required to demonstrate no increase in flood stages will occur on off-site properties, using the mean annual, 10-year, 25-year, and 100-year storm events.
- Demonstrate that site will not impede the conveyance of contributing off-site flows.
- Demonstrate that the project will not increase flood stages up- or down-stream of the project area(s).
- Watershed Model information may be available for download using the following link: https://watermatters.sharefile.com/d-s8c9019e00fd243908654e733a6b2016c
- Provide equivalent compensating storage for all 100-year, 24-hour riverine floodplain impacts if applicable. Providing cup-for-cup storage in dedicated areas of excavation is the preferred method of compensation~~.~~ if no impacts to flood conveyance are proposed and storage impacts and compensation occur within the same basin. In this case, tabulations should be provided at 0.5-foot increments to demonstrate encroachment and compensation occur at the same levels. Otherwise, storage modeling will be required to demonstrate no increase in flood stages will occur on off-site properties, using the mean annual, 10-year, 25-year, and 100-year storm events for the pre- and post-development conditions.
- Please be aware that if there is credible historical evidence of past flooding or the physical capacity of the downstream conveyance or receiving waters indicates that the conditions for issuance will not be met without consideration of storm events of different frequency or duration, applicants shall be required to provide additional analyses using storm events of different duration or frequency than the 25-year 24-hour storm event, or to adjust the volume, rate or timing of discharges. [Section 3.0 Applicant's Handbook Volume II]
- On June 28, 2024, Senate Bill 7040, which updates Florida's stormwater rules and design criteria, was signed into law. The updates affect the water quality treatment performance standards, Operation & Maintenance (O&M) requirements, and Dam Safety requirements. Further information regarding the updated rules and design criteria, implementation timeline and grandfathering provisions can be found at the following link: https://floridadep.gov/water/engineering-hydrology-geology/content/erp-stormwater-resource-center

Water Quality Discussions: (Type of Treatment, Technical Characteristics, Non-presumptive Alternatives, etc.)

- Provide water quality treatment for entire project area and all contributing off-site flows.
- If any localized closed basins (up to 100-year, 24-hour storm) are now being conveyed to the bay, address pollutant loading and may need treatment to ensure no increasing of pollutants to the bay.

- Taking some runoff that originally went to a pond today. Some of this runoff is to ERP permitted ponds (i.e., Swann Pond, etc). Will need to provide compensatory water quality treatment for this runoff which will now bypass its treatment pond and go to the bay.
- On June 28, 2024, Senate Bill 7040, which updates Florida's stormwater rules and design criteria, was signed into law. The updates affect the water quality treatment performance standards, Operation & Maintenance (O&M) requirements, and Dam Safety requirements. Further information regarding the updated rules and design criteria, implementation timeline and grandfathering provisions can be found at the following link: https://floridadep.gov/water/engineering-hydrology-geology/content/erp-stormwater-resource-center

Sovereign Lands Discussion: (Determining Location, Correct Form of Authorization, Content of Application, Assessment of Fees, Coordination with FDEP)

- Coordination with the Tampa Port Authority for projects located in Hillsborough County is recommended.

Operation and Maintenance/Legal Information: (Ownership or Perpetual Control, O&M Entity, O&M Instructions, Homeowner Association Documents, Coastal Zone requirements, etc.)

- The permit must be issued to entity that owns or controls the property.
- Provide evidence of ownership or control by deed, easement, contract for purchase, etc. Evidence of ownership or control must include a legal description. A Property Appraiser summary of the legal description is NOT acceptable.

Application Type and Fee Required:

- SWERP – Sections A, C, and E of the ERP Application.
- Consult the fee schedule for different thresholds.

Other: (Future Pre-Application Meetings, Fast Track, Submittal Date, Construction Start Date, Required District Permits – WUP, WOD, Well Construction, etc.)

- An application for an individual permit to construct or alter a dam, impoundment, reservoir, or appurtenant work, requires that a notice of receipt of the application must be published in a newspaper within the affected area. Provide documentation that such noticing has been accomplished. Note that the published notices of receipt for an ERP can be in accordance with the language provided in Rule 40D-1.603(10), F.A.C.

- Provide a copy of the legal description (of all applicable parcels within the project area) in one of the following forms:
  a. Deed with complete Legal Description attachment.
  b. Plat.
  c. Boundary survey of the property(ies) with a sketch.

- The plans and drainage report submitted electronically must include the appropriate information required under Rules 61G15-23.005 and 61G15-23.004 (Digital), F.A.C. [Note: digital signature notes were revised in a rule update on April 21, 2025] The following text is required by the Florida Board of Professional Engineers (FBPE) to meet this requirement when a digitally created seal is not used and must appear where the signature would normally appear:

  ELECTRONIC (Manifest): *[NAME] State of Florida, Professional Engineer, License No. [NUMBER] This item has been electronically signed and sealed by [NAME] on the date indicated here using a SHA authentication code. Printed copies of this document are not considered signed and sealed and the SHA authentication code must be verified on any electronic copies*

  DIGITAL: *[NAME] State of Florida, Professional Engineer, License No. [NUMBER]; This item has been digitally signed and sealed by [NAME] on the date indicated here. Signature must be verified on any electronic copies.*
- Provide soil erosion and sediment control measures for use during construction. Refer to ERP Applicant's Handbook Vol. 1 Part IV Erosion and Sediment Control.
- Demonstrate that excavation of any stormwater ponds does not breach an aquitard (see Subsection 2.1.1, A.H.V.II) such that it would allow for lesser quality water to pass, either way, between the two systems. In those geographical areas of the District where there is not an aquitard present, the depth of the pond(s) shall

not be excavated to within two (2) feet of the underlying limestone which is part of a drinking water aquifer. [Refer to Subsection 5.4.1(b), A.H.V.II]

- If lowering of SHWE is proposed, then burden is on Applicant to demonstrate no adverse onsite or offsite impacts as per Subsection 3.6, A.H.V.II. Groundwater drawdown 'radius of influence' computations may be required to demonstrate no adverse onsite or offsite impacts. Please note that new roadside swales or deepening of existing roadside swales may result in lowering of SHWE. Proposed ponds with control elevation less than SHWE may result in adverse lowering of onsite or offsite groundwater.
- On February 15, 2024, the U.S. District Court for the District of Columbia issued a decision vacating the U.S. Environmental Protection Agency's approval of Florida's application to assume Clean Water Act Section 404 permitting responsibilities in certain waters in Florida. In light of this decision, the U.S. Army Corps of Engineers (USACE) is currently the only entity in the State of Florida with authority to issue permits under Section 404 of the Clean Water Act. The USACE recognizes that either the District Court or an Appellate Court may issue a full or partial stay of the February 15th order at some point. In the interim, applicants may submit applications to the USACE for activities involving the discharge of dredged or fill material into formerly state-assumed waters. The USACE will begin processing any applications it receives, however applicants and stakeholders should recognize the uncertainty surrounding the current litigation. Further information can be found at these two links:

  https://floridadep.gov/water/submerged-lands-environmental-resources-coordination/content/state-404-program

  https://www.saj.usace.army.mil/Missions/Regulatory/

Disclaimer: The District ERP pre-application meeting process is a service made available to the public to assist interested parties in preparing for submittal of a permit application. Information shared at pre-application meetings is superseded by the actual permit application submittal. District permit decisions are based upon information submitted during the application process and Rules in effect at the time the application is complete.

THIS FORM IS INTENDED TO FACILITATE AND GUIDE THE DIALOGUE DURING A PRE-APPLICATION MEETING BY PROVIDING A PARTIAL "PROMPT LIST" OF DISCUSSION SUBJECTS. IT IS NOT A LIST OF REQUIREMENTS FOR SUBMITTAL BY THE APPLICANT.

SOUTHWEST FLORIDA WATER MANAGEMENT DISTRICT
RESOURCE REGULATION DIVISION
PRE-APPLICATION MEETING NOTES

FILE NUMBER:

PA 413326

Date:	04/22/2026		
Time:	1400		
Project Name:	South Howard Flood Relief and Streetscape Project		
District Engineer:	Scott VanOrsdale		
District ES:	Chaz LaRiche		
Attendees:	Chris Chandler, Amanda Serra, Daniel Parsons, Jeff DeBosier, Brett Sillman		
County:	Hillsborough County	**Sec/Twp/Rge:**	26,27/29/18
Total Land Acreage:		**Project Acreage:**	Acres

Prior On-Site/Off-Site Permit Activity:

- ERP - 20724, 6550, 2417
- Pre App 404594, 412612

Project Overview:

- Comments - Project aims to alleviate roadway and structural flooding within the Parkland Estates and Palma Ceia Pines neighborhoods in South Tampa by constructing at least 6000 linear feet of new box culvert outfall to Hillsborough Bay
- South Howard Ave and W Swann Ave
- Main purpose was to discuss a slight change in the box culvert and if the new water quality rules will impact the flood improvement project. Since no new impervious is proposed, formal water quality treatment will not likely be required; however, this project will modify several existing permits. Taking some runoff that originally went to a pond today. Will need to provide reasonable assurance the bypassed areas will not have an adverse water quality impact to the receiving systems (bay). In the case of Swan Pond, the permitted treatment volume was only designed to accommodate a portion of the contributing area. The current pond design is undersized to accommodate the entire drainage basin, reducing the contributing area will increase the treatment function for the remaining area. It may be warranted to provide some form of additional BMPs to reduce sediments and/or other pollutants for the redirected areas.
- If any localized closed basins (up to 100-year, 24-hour storm) are now being conveyed to the bay, address pollutant loading and may need treatment to ensure no increase of pollutants to the bay.
- Tampa Bay is considered impaired for nutrients.
- Tidal receiving waterbody.
- Improvements will modify several existing permits. Modifications to permitted areas will need to demonstrate no adverse impact to the water quality or attenuation requirements of the permitted systems.
- Individual permit would likely be required since the project will alter several permitted systems.
- Additional comments noted below:

Environmental Discussion: (Wetlands On-Site, Wetlands on Adjacent Properties, Delineation, T&E species, Easements, Drawdown Issues, Setbacks, Justification, Elimination/Reduction, Permanent/Temporary Impacts, Secondary and Cumulative Impacts, Mitigation Options, SHWL, Upland Habitats, Site Visit, etc.)

- FWC Manatee conditions for in-water work including, but not limited to, manatee grates on pipes greater than 8 inches. Possible surface water impacts from riprap installation at existing outfall into Hillsborough Bay.
- Provide the limits of jurisdictional wetlands and surface waters. Roadside ditches or other water conveyances, including permitted and constructed water conveyance features, can be claimed as surface waters per Chapter 62-340 F.A.C. if they do not meet the definition of a swale as stated under Rule 403.803 (14) F.S.
- Notice of changes to Florida Statues: Be advised that Senate Bill 492 provides changes to the Mitigation Banking statute and Senate Bill 180 provides changes to the tolling period of permits and formal determinations related to emergency orders.
  Link to Senate Bill 492: https://www.flsenate.gov/Session/Bill/2025/492/?Tab=BillText.

Link to Senate Bill 180: https://www.flsenate.gov/Session/Bill/2025/180/?Tab=BillText .

- A site visit by District staff will be required to verify the presence and extent, or absence of wetlands and/or surface waters. Prior to the site visit, District staff will contact the applicant or authorized agent to provide an approximate date of the site visit and to ensure that the project area is accessible. If wetlands or surface waters are discovered during the site visit, additional information may be required. A site visit will not be scheduled until the appropriate signatures on the application and the fee is submitted.
- On February 15, 2024, the U.S. District Court for the District of Columbia issued a decision vacating the U.S. Environmental Protection Agency's approval of Florida's application to assume Clean Water Act Section 404 permitting responsibilities in certain waters in Florida. In light of this decision, the U.S. Army Corps of Engineers (USACE) is currently the only entity in the State of Florida with authority to issue permits under Section 404 of the Clean Water Act. The USACE recognizes that either the District Court or an Appellate Court may issue a full or partial stay of the February 15th order at some point. In the interim, applicants may submit applications to the USACE for activities involving the discharge of dredged or fill material into formerly state-assumed waters. The USACE will begin processing any applications it receives, however applicants and stakeholders should recognize the uncertainty surrounding the current litigation. Further information can be found at these two links:

  https://floridadep.gov/water/submerged-lands-environmental-resources-coordination/content/state-404-program

  https://www.saj.usace.army.mil/Missions/Regulatory/

Site Information Discussion: (SHW Levels, Floodplain, Tailwater Conditions, Adjacent Off-Site Contributing Sources, Receiving Waterbody, etc.)

- Watersheds – Tampa Bay
- Check FDEP's HUC 12 Boundaries with Impaired Waters and OFWs to determine status of receiving waterbody. The site appears to be located within <McDill Air Force Base / Tampa Bay> HUC 12 subwatershed. The HUC 12 subwatershed appears to contain Impaired WBID which also appears to be located downstream of the site.
- Document/justify SHWE's at pond locations, wetlands, and OSWs.
- Determine normal pool elevations of wetlands.
- Determine 'pop-off' locations and elevations of wetlands.
- Provide documentation to support tailwater conditions for quality and quantity design.
- Proposed control structures in wetlands should be consistent with existing 'pop-off' elevations of wetlands; demonstrate no adverse impacts to wetland hydroperiod for up to 2.33-yr (mean annual) storm.
- Minimum flows and levels of receiving waters shall not be disrupted.
- Stormwater retention and detention systems are classified as moderate sanitary hazards with respect to public and private drinking water wells. Stormwater treatment facilities shall not be constructed within 100 feet of an existing public water supply well and shall not be constructed within 75 feet of an existing private drinking water well (Subsection 8.5.2, A.H.V.I)
- Any wells on site should be identified and their future use/abandonment must be designated.

Water Quantity Discussions: (Basin Description, Storm Event, Pre/Post Volume, Pre/Post Discharge, etc.)

- Storage modeling will be required to demonstrate no increase in flood stages will occur on off-site
- properties, using the mean annual, 10-year, 25-year, and 100-year storm events.
- Demonstrate that site will not impede the conveyance of contributing off-site flows.
- Demonstrate that the project will not increase flood stages up- or down-stream of the project area(s).
- Watershed Model information may be available for download using the following link: https://watermatters.sharefile.com/d-s8c9019e00fd243908654e733a6b2016c
- Provide equivalent compensating storage for all 100-year, 24-hour riverine floodplain impacts if applicable. Providing cup-for-cup storage in dedicated areas of excavation is the preferred method of compensation if no impacts to flood conveyance are proposed and storage impacts and compensation occur within the same basin. In this case, tabulations should be provided at 0.5-foot increments to demonstrate encroachment and compensation occur at the same levels. Otherwise, storage modeling will be required to demonstrate no increase in flood stages will occur on off-site properties, using the mean annual, 10-year, 25-year, and 100-year storm events for the pre- and post-development conditions.
- Please be aware that if there is credible historical evidence of past flooding or the physical capacity of the downstream conveyance or receiving waters indicates that the conditions for issuance will not be met without consideration of storm events of different frequency or duration, applicants shall be required to

provide additional analyses using storm events of different duration or frequency than the 25-year 24-hour storm event, or to adjust the volume, rate or timing of discharges (Section 3, A.H.V.II).

- Please verify whether the proposed activity meets the definition of a dam (Subsection 2.(a), A.H.V.I) and is subject to the dam safety criteria (Subsection 5.9, A.H.V.II). If applicable, please refer to Subsection 8.4.5 (A.H.V.I), Appendix L (A.H.V.I) and Subsection 5.9 (A.H.V.II), for permitting criteria that apply when the proposed activity is for construction of a new dam or alteration of an existing dam.

Water Quality Discussions: (Type of Treatment, Technical Characteristics, Non-presumptive Alternatives, etc.)

- Formal water quality treatment is not likely required for the flood control project unless stormwater is diverted into a new receiving system.
- If any localized closed basins (up to 100-year, 24-hour storm) are now being conveyed to the bay, address pollutant loading and may need treatment to ensure no increasing of pollutants to the bay.
- This project will modify several existing permits. Taking some runoff that originally went to a pond today. Will need to provide reasonable assurance the bypassed areas will not have an adverse water quality impact to the receiving systems (bay). In the case of Swan Pond, the permitted treatment volume was only designed to accommodate a portion of the contributing area. The current pond design is undersized to accommodate the entire drainage basin, reducing the contributing area will increase the treatment function for the remaining area. It may be warranted to provide some form of additional BMPs to reduce sediments and/or other pollutants for the redirected areas.
- Will acknowledge compensatory treatment to offset pollutant loads associated with portions of the project area that cannot be physically treated.
- Improvements will modify several existing permits. Modifications to permitted areas will need to demonstrate no adverse impact to the water quality or attenuation requirements of the permitted systems.

Sovereign Lands Discussion: (Determining Location, Correct Form of Authorization, Content of Application, Assessment of Fees, Coordination with FDEP)

- The project may be located within state owned sovereign submerged lands (SSSL). Be advised that a title determination will be required from FDEP to verify the presence and/or location of SSSL.
- If use of SSSL is proposed, authorization will be required. Refer to Chapter 18-21, F.A.C. and Chapter 18-20, F.A.C. for guidance on projects that impact SSSL and Aquatic Preserves.
- Include discussion on the potential type of SSSL authorization that may be required. Refer to Chapter 18-21.005, F.A.C.
- Coordination with the Tampa Port Authority for projects located in Hillsborough County is recommended.

Operation and Maintenance/Legal Information: (Ownership or Perpetual Control, O&M Entity, O&M Instructions, Homeowner Association Documents, Coastal Zone requirements, etc.)

- The permit must be issued to entity that owns or controls the property.
- Provide evidence of ownership or control by deed, easement, contract for purchase, etc. Evidence of ownership or control must include a legal description. A Property Appraiser summary of the legal description is NOT acceptable.
- Will need to demonstrate authorization to modify existing permits within the project.

Application Type and Fee Required:

- SWERP – Sections A, C, and E of the ERP Application.
  - Fee will need to be determined based on the project area limits. Consult the fee schedule for the applicable fee.

Other: (Future Pre-Application Meetings, Fast Track, Submittal Date, Construction Start Date, Required District Permits – WUP, WOD, Well Construction, etc.)

- An application for an individual permit to construct or alter a dam, impoundment, reservoir, or appurtenant work, requires that a notice of receipt of the application must be published in a newspaper within the affected area. Provide documentation that such noticing has been accomplished. Note that the published notices of receipt for an ERP can be in accordance with the language provided in Rule 40D-1.603(10), F.A.C.
- Provide a copy of the legal description (of all applicable parcels within the project area) in one of the following forms:
  a. Deed with complete Legal Description attachment.
  b. Plat.
  c. Boundary survey of the property(ies) with a sketch.

- The plans and drainage report submitted electronically must include the appropriate information required under Rules 61G15-23.005 and 61G15-23.004 (Digital), F.A.C. [Note: digital signature notes were revised in a rule update on April 21, 2025] The following text is required by the Florida Board of Professional Engineers (FBPE) to meet this requirement when a digitally created seal is not used and must appear where the signature would normally appear:

  ELECTRONIC (Manifest): *[NAME] State of Florida, Professional Engineer, License No. [NUMBER] This item has been electronically signed and sealed by [NAME] on the date indicated here using a SHA authentication code. Printed copies of this document are not considered signed and sealed and the SHA authentication code must be verified on any electronic copies*

  DIGITAL: *[NAME] State of Florida, Professional Engineer, License No. [NUMBER]; This item has been digitally signed and sealed by [NAME] on the date indicated here. Signature must be verified on any electronic copies.*

- Provide soil erosion and sediment control measures for use during construction. Refer to ERP A.H.V.I, Part IV "Erosion and Sediment Control".
- Demonstrate that excavation of any stormwater ponds does not breach an aquitard (see Subsection 2(a)(9), A.H.V.I) such that it would allow for lesser quality water to pass, either way, between the two systems. In those geographical areas of the District where there is not an aquitard present, the depth of the pond(s) shall not be excavated to within three (3) feet of the underlying limestone which is part of a drinking water aquifer (Subsection 8.5.2, A.H.V.I)
- If lowering of SHWE is proposed, then burden is on Applicant to demonstrate no adverse onsite or offsite impacts as per Subsection 3.6, A.H.V.II. Groundwater drawdown 'radius of influence' computations may be required to demonstrate no adverse onsite or offsite impacts. Please note that new roadside swales or deepening of existing roadside swales may result in lowering of SHWE. Proposed ponds with control elevation less than SHWE may result in adverse lowering of onsite or offsite groundwater.
- On February 15, 2024, the U.S. District Court for the District of Columbia issued a decision vacating the U.S. Environmental Protection Agency's approval of Florida's application to assume Clean Water Act Section 404 permitting responsibilities in certain waters in Florida. In light of this decision, the U.S. Army Corps of Engineers (USACE) is currently the only entity in the State of Florida with authority to issue permits under Section 404 of the Clean Water Act. The USACE recognizes that either the District Court or an Appellate Court may issue a full or partial stay of the February 15th order at some point. In the interim, applicants may submit applications to the USACE for activities involving the discharge of dredged or fill material into formerly state-assumed waters. The USACE will begin processing any applications it receives, however applicants and stakeholders should recognize the uncertainty surrounding the current litigation. GENERAL SITE NOTES

1. THE CONTRACTOR SHALL PROVIDE FOR MAINTENANCE OF TRAFFIC DURING CONSTRUCTION. TRAFFIC MAINTENANCE PRACTICES AND SIGNAGE SHALL BE IN ACCORDANCE WITH FDOT "STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE".
2. EROSION/SEDIMENTATION CONTROL:

   THE CONTRACTOR IS TO PROVIDE EROSION CONTROL/SEDIMENTATION BARRIER (HAY BALES OR SILTATION CURTAIN). IF REQUIRED, TO PREVENT SILTATION OF ADJACENT PROPERTY, STREETS, STORM SEWERS AND WATERWAYS. IN ADDITION, THE CONTRACTOR SHALL PLACE STRAW MULCH OR OTHER SUITABLE MATERIAL ON THE GROUND, AS REQUIRED. IN AREAS WHERE CONSTRUCTION RELATED TRAFFIC IS TO ENTER AND EXIT THE SITE, IF, IN THE OPINION OF THE ENGINEER AND/OR LOCAL AUTHORITIES, EXCESSIVE QUANTITIES OF EARTH ARE TRANSPORTED OFFSITE, EITHER BY NATURAL DRAINAGE OR BY VEHICLE TRAFFIC, THE CONTRACTOR IS TO REMOVE AND CLEAN SAID EARTH TO THE SATISFACTION OF THE ENGINEER AND/OR LOCAL AUTHORITIES.

   PRIOR TO BEGINNING THE CLEARING AND GRUBBING OF THE PROPERTY, HAY BALES SHALL BE STAKED TO THE GROUND ALONG THE ALL AROUND THE SITE PROPERTY LINE TO PREVENT STORMWATER FROM WASHING ERODED SOILS FROM THE PROPERTY INTO THE EXISTING STORMWATER SYSTEM.
3. LOCATIONS, ELEVATIONS AND DIMENSIONS OF EXISTING UTILITIES, STRUCTURES AND OTHER FEATURES ARE SHOWN ACCORDING TO THE BEST INFORMATION AVAILABLE AT THE TIME OF THE PREPARATION OF THESE PLANS BUT DO NOT PURPORT TO BE ABSOLUTELY CORRECT. THE CONTRACTOR SHALL FIELD VERIFY THE LOCATIONS, ELEVATIONS AND DIMENSION OF ALL EXISTING UTILITIES, STRUCTURES AND OTHER FEATURES AFFECTING THIS WORK PRIOR TO CONSTRUCTION.
4. IT SHALL BE THE CONTRACTOR'S SOLE RESPONSIBILITY TO NOTIFY "SUNSHINE" FORTY-EIGHT (48) HOURS BEFORE DIGGING, BORING, OR ANY OTHER CONSTRUCTION ACTIVITY AT 1-800-282-8881. "UNDERGROUND UTILITY NOTIFICATION CENTER" SO THAT UNDERGROUND UTILITIES MAY BE FIELD LOCATED. SUCH LOCATIONS SHALL BE OBTAINED PRIOR TO STARTING CONSTRUCTION AND SHALL BE MAINTAINED DURING CONSTRUCTION.
5. IN AREAS WHERE FILL MATERIAL IS REQUIRED, THE EXISTING VEGETATION AND ROOTS SHALL BE REMOVED PRIOR TO PLACING ANY FILL MATERIAL. THE FILL SHALL BE PLACED IN LIFTS NO GREATER THAN 12" AS MEASURED LOOSE, AND COMPACTED TO A UNIFORM DENSITY ASTM D698. THE MATERIAL SHALL BE COMPACTED AT A MOISTURE CONTENT PERMITTING THE SPECIFIED COMPACTION. THE FILL SHALL BE TESTED BY AN INDEPENDENT TESTING LABORATORY AND THE RESULTS SUPPLIED TO THE ENGINEER.
6. ALL GRASSED AREAS DISTRIBUTED BY CONTRACTOR SHALL BE SEEDED AND MULCHED.
7. REPAIR AND REPLACEMENT OF ALL PRIVATE AND PUBLIC PROPERTY AFFECTED BY THIS WORK SHALL BE RESTORED TO A CONDITION EQUAL TO OR BETTER THAN EXISTED BEFORE COMMENCING CONSTRUCTION UNLESS SPECIFICALLY EXEMPTED BY THE PLANS. COST TO THE INCIDENTAL TO OTHER CONSTRUCTION OR NO EXTRA COMPENSATION TO BE ALLOWED.
8. CONTRACTOR SHALL SPRINKLE OR OTHERWISE APPLY WATER TO AFFECTED CONSTRUCTION AREA TO CONTROL BOTH SIGNIFICANT WIND EROSION AND FUGITIVE DUST.
9. CONCRETE SHALL HAVE A COMPRESSIVE STRENGTH OF 3000 PSI AT 28 DAYS. PORTLAND CEMENT SHALL CONFORM TO ASTM C150. AGGREGATE SHALL CONFORM TO ASTM C33. WIRE FABRIC SHALL CONFORM TO ASTM A185. READY MIXED CONCRETE SHALL CONFORM TO ASTM C-94. SIX INCH MESH, 10 GAUGE WIRE FABRIC SHALL BE USED IN SLABS FOUR INCHES THICK. SIX INCH MESH, 6 GAUGE SHALL BE USED IN SLABS THICKER THAN 4". SURFACES SHALL BE FREE FROM TROWEL OR MACHINE MARKS. SURFACE VARIATIONS SHALL NOT EXCEED 1/4 INCH UNDER A 10 FOOT STRAIGHTEDGE. EDGE OF SLABS SHALL HAVE A SMOOTH FINISH. SIDEWALKS SHALL HAVE A BROOM FINISH.
10. COORDINATION WITH THE TELEPHONE COMPANY SHALL BE DONE WITH GENERAL TELEPHONE COMPANY, P.O. BOX (MC1886), TAMPA, FLORIDA, 33611, (813) 228-4111.
11. ELECTRIC POWER INSTALLATION SHALL BE COORDINATED BY CONTRACTOR WITH TAMPA ELECTRIC COMPANY, P.O. BOX 111, TAMPA, FLORIDA, 33601, (813) 228-4111.
12. THE CONTRACTOR SHALL CONTACT THE ENGINEERS OFFICE IMMEDIATELY ON ANY CONFLICTS ARISING DURING CONSTRUCTION OF ANY IMPROVEMENTS SHOWN ON THESE DRAWINGS. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO CONSULT WITH THE ENGINEER FOR MAKING ANY AND ALL REQUIRED INTERPRETATIONS OF THE PLANS, HOWEVER, THIS IN NO WAY RELIEVES THE CONTRACTOR OF HIS RESPONSIBILITY FOR CONSTRUCTING THE PROJECT TO ACCOMPLISH THE INTENT OF THE PLANS.
13. ALL UNDERGROUND UTILITIES MUST BE INSTALLED AND/OR RELOCATED AS REQUIRED PRIOR TO CONSTRUCTION OF PAVEMENT.
14. ALL CONSTRUCTION SHALL CONFORM TO THE APPLICABLE CITY OF TAMPA, FLORIDA, CODES, ORDINANCES AND REGULATIONS.
15. AS PER FEDERAL FLOOD MAPS, THIS PROPERTY IS LOCATED IN ZONE C, COMMUNITY 120114, PANEL NO. 0014C, DATED SEPTEMBER 3, 1982.
16. WHERE EXISTING PAVEMENT MATCHES NEW PAVEMENT, EXISTING PAVEMENT SHALL BE SAW CUT AT EDGES. NEW CONSTRUCTION TO MATCH EXISTING.

UTILITY NOTES

1. ALL SANITARY SEWER CONSTRUCTION SHALL CONFORM TO THE CITY OF TAMPA CONSTRUCTION STANDARDS, LATEST EDITION.
2. A SEPARATION OF 10' HORIZONTALLY AND 18" VERTICALLY MUST BE MAINTAINED BETWEEN WATER AND SANITARY SEWER LINES.
3. WATER SYSTEM CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE CITY OF TAMPA CONSTRUCTION STANDARDS, LATEST EDITION.
4. LOCATIONS, ELEVATIONS AND DIMENSIONS OF EXISTING UTILITIES, STRUCTURES AND OTHER FEATURES ARE SHOWN ACCORDING TO HE BEST INFORMATION AVAILABLE AT THE TIME OF THE PREPARATION OF THESE PLANS BUT DO NOT PURPORT TO BE ABSOLUTELY CORRECT. THE CONTRACTOR SHALL FIELD VERIFY THE LOCATIONS, ELEVATIONS AND DIMENSIONS OF ALL EXISTING UTILITIES, STRUCTURES AND OTHER FEATURES AFFECTING HIS WORK PRIOR TO CONSTRUCTION.
5. ALL NEW WATER AND FIRE LINES SHALL HAVE A MINIMUM OF 3'-0" COVER. THRUST BLOCKING SHALL BE PROVIDED FOR ALL WATER AND FIRE LINES.
6. SANITARY SEWER PIPE SHALL BE PVC CONFORMING TO ASTM D3034, SDR 35.
7. ALL WATER MAINS SHALL BE PVC CONFORMING TO ASTM C-900, 200 PSI PIPE WITH PUSH ON "O" RING JOINT UNLESS OTHERWISE NOTED.
8. ALL SEWER LATERALS TO BE CONNECTED TO SEWER MAIN BY 4" WYE CONNECTION. ALL WERE LATERALS SHALL BE 4" PVC UNLESS OTHERWISE APPROVED BY ENGINEER.
9. ALL WATER SERVICE CONNECTIONS SHALL BE 3/4" UNLESS OTHERWISE APPROVED BY ENGINEER.
10. MINIMUM 95% DENSITY OF MODIFIED PROCTOR (ASTM 1557) SUBGRADE ELEVATION ABOVE ALL PIPE CROSSING OF ROAD.
11. ANY WATER OR SANITARY SEWER PIPE HAVING LESS THAN 36" OF COVER WHICH MUST SUPPORT VEHICLE WEIGHT, SHALL BE CAST IRON PIPE, DUCTILE IRON PIPE, CONCRETE ENCASED VITRIFIED CLAY PIPE, SCHEDULE 80 PVC OR C-900 PVC.
12. CONTRACTOR SHALL CONTROL RUNOFF AND EROSION DURING CONSTRUCTION THROUGH THE USE OF SEDIMENT BASINS, STRAW OR HAY BALES AS APPROPRIATE.
13. CONTRACTOR SHALL SPRINKLE OR OTHERWISE MANUALLY APPLY WATER TO AFFECTED CONSTRUCTION AREA TO CONTROL BOTH SIGNIFICANT WIND EROSION AND FUGITIVE DUST.

GENERAL NOTES

1. ALL SHOWN DIMENSIONS ARE APPROXIMATE. TRUE DIMENSIONS SHOULD BE DETERMINED IN THE FIELD.
2. FORCE MAIN FITTINGS SHALL BE THRUST BLOCKED OR USE R.M.J.
3. FORCE MAIN PIPE SHALL BE DIP CLASS 50
4. FILL ALL OPENINGS AROUND PIPES WITH NON-SHRINK GROUT EXCEPT WHERE OTHERWISE SPECIFIED.
5. BOLTS, WASHERS, NUTS, SCREWS, HINGES, ETC., SHALL BE STAINLESS STEEL TYPE 316 UNLESS OTHERWISE SPECIFIED OR APPROVED BY ENGINEER.
6. STAINLESS STEEL, TYPE 304, WELDED LINK CHAIN WITH A 1240# (PUMP WT x 1.5) LIFTING CAPACITY
7. DRILL AND TAP BY-PASS PLUG VALVE BLIND FLANGE, INSTALL 3/4" BRASS VALVE AND PIPE DOWNWARD TO VALVE VAULT FLOOR.
8. ECCENTRIC PLUG VALVES SHALL BE DEZURIK SERIES 100, OR APPROVED EQUAL.
9. CHECK VALVES SHALL BE APCO SERIES 100, OR APPROVED EQUAL.
10. ALL PIPE, FITTINGS, SUPPORTS, VALVES, ETC. SHALL RECEIVE THE FOLLOWING SYSTEM COATING:
    a) SHOP COAT - ONE, 1.5 MILS, MDFT SIKAGARD #62 (THINNED 10-15%)
    b) FIELD COAT - TWO COATS, 10 MILS, MDFT EACH SIKAGARD #62 NO. 300 M, OR APPROVED EQUAL.
11. VALVE VAULT AND WET WELL ACCESS COVERS SHALL BE ALUMINUM WITH STAINLESS STEEL HARDWARE AND SHALL WITHSTAND A LIVE LOAD OF 150 PSF. CONTRACTOR TO SUBMIT SHOP DRAWINGS DETAILING INSTALLATION.
12. ALL STEEL REINFORCING SHALL BE DETAILED ACCORDING TO THE "MANUAL OF STANDARD PRACTICE FOR DETAILING REINFORCED CONCRETE STRUCTURES," ACI STANDARD 315-65. THE ACTUAL PLACEMENT OF STEEL REINFORCING SHALL BE SHOWN ON SHOP DRAWINGS. ALL LAPS AND SPLICES SHALL BE AT LEAST 32 BAR DIAMETERS OR 24 INCHES.
13. BACKFILL SHALL BE COMPACTED IN 8 INCH LAYERS TO 95% OF THE MAXIMUM DRY DENSITY IN CONFORMANCE WITH AASHTO T-180, METHOD A.
14. THE EXTERIOR OF EACH WET WELL SHALL BE PAINTED WITH TWO (2) COATS OF KOPPERS "BITUMASTIC 300-M" OR AN APPROVED EQUAL, APPLIED IN ACCORDANCE WITH MANUFACTURERS DIRECTIONS.
15. BOTTOM SLAB AND FIRST BARREL TO BE MONOLITHICALLY POURED AS ONE INTEGRAL PART / COMPONENT.
16. REINFORCING IN THE WET PIT BASE AND BASE AND TOP SLABS SHALL BE AS SHOWN ON THE PLANS. REINFORCING SHALL COMPLY WITH ASTM C 478 EXCEPT THAT REINFORCING SHALL CONSIST ONLY OF BARS MEETING THE REQUIREMENTS OF ASTM A 615 GRADE 60.

PLAN

SKIMMER DETAIL

SIDE DRAIN FILTER NOTES

1. **DRAIN PIPE** SHALL BE 6" DIAMETER CORRUGATED POLYETHYLENE PIPE AS MANUFACTURED BY A.D.S. OR APPROVED EQUAL. PIPE SHALL BE PERFORATED IN ACCORDANCE WITH ASTM F-405 AND ASTM F-667. PIPE SHALL BE WRAPPED WITH A HEAVY DUTY POLYESTER FILTER ENVELOPE (ADS SOCK) WITH A WEIGHT OF 2.5 TO 3.5 OZ/SY IN THE ACCORDANCE WITH ASTM D1910 AND D231. CLEANOUTS SHALL BE PROVIDED AT 100' O.C.

2. **SAND FILTER MEDIUM** SHALL BE SILICA SAND PER F.D.O.T. INDEX NO. 266 OF THE ROADWAY AND TRAFFIC DESIGN STANDARDS WITH REFERENCE TO SECTION 902-4 OF THE STANDARD SPECIFICATIONS, OR APPROVED EQUAL.

3. **NON-POUROUS FABRIC** SHALL BE MIRAFI 1R OR ON APPROVED EQUAL WITH A WEIGHT OF 9.0Z/SY IN ACCORDANCE WITH ASTM D-3776-79, A THICKNESS OF 90 MILLS IN ACCORDANCE WITH ASTM D-1777-64, AND A BURST STRENGTH OF 350 PSI IN ACCORDANCE WITH ASTM D-3786-80.

4. **BANK AREA** OTHER THAN FILTRATION SYSTEM SHALL BE SODDED TO NORMAL WATER LINE OR TOE OF SLOPE. SOD SHALL BE PROPERLY CARED FOR BY PROVIDING NECESSARY WATER AND NUTRIENTS TO ENSURE LIFE OF SOD.

UNIT PRICE FOR DETENTION POND SHALL INCLUDE EXCAVATION, EMBANKMENT, FINAL DRESSING, SOD, SEEDING AND MULCHING, FILTRATION CONSTRUCTION EXCEPT DRAINAGE STRUCTURES WHICH ARE BEING BID SEPARATELY.

NOTES

1. ALL ELEVATIONS ARE BASED ON NOS DATUM UNLESS OTHERWISE NOTED.

2. LOCATIONS OF EXISTING UNDERGROUND UTILITIES WERE PREPARED FROM THE MOST RELIABLE INFORMATION AVAILABLE. VERIFY THE LOCATION AND DEPTH OF ALL PERTINENT UTILITIES PRIOR TO CONSTRUCTION. NOTIFY UTILITY COMPANIES AT LEAST 48 HOURS BEFORE BEGINNING CONSTRUCTION.

3. NEW HOUSE CONNECTION LOCATIONS ARE APPROXIMATE ONLY. REQUIRED LOCATION AND DEPTH WILL BE COORDINATED WITH THE HOMEOWNER AT THE TIME OF CONSTRUCTION BY THE D.S.S. CONSTRUCTION CREWS.

4. WHERE AN EXISTING SEWER IS TO BE REMOVED OR ABANDONED AND REPLACED WITH A NEW SEWER, CONTINUOUS SEWER SERVICE MUST BE MAINTAINED AT ALL TIMES, WHILE CONNECTING THE LATERALS TO THE NEW SEWER IN PLACE.

5. THE MINIMUM CLEARANCE BETWEEN HOUSE LATERALS AND WATER LINES SHALL BE 6" UNDER ALL CIRCUMSTANCES. IF THE HOUSE LATERAL IS BELOW A WATER LINE AND HAS BETWEEN 6" AND 18" OF CLEARANCE, OR IF THE LATERAL IS ABOVE THE WATER LINE REGARDLESS OF CLEARANCE, THEN A NOMINAL 20' LENGTH OF GREEN AWWA CLASS 150 C900 PVC PIPE SHALL BE CENTERED OVER/UNDER THE WATER LINE.

NOTES

1. REINFORCING STEEL FOR ALL MANHOLES SHALL CONFORM TO ASTM-DES: C-48 AND PLACED AS DESCRIBED IN THE SPECIFICATIONS.
2. ALL PIPE STUBS FROM MANHOLES FOR FUTURE CONNECTIONS OR OTHER CONTRACT DIVISIONS SHALL BE PROVIDED WITH WATER TIGHT PLUGS PLACED FROM WITHIN THE MANHOLE.
3. SEE SPECIFICATIONS FOR MATERIALS REQUIREMENTS AND PLACEMENTS AND COMPACTION OF PIPE AND STRUCTURE BEDDING.
4. STANDARD SHALLOW-TYPE MANHOLES WITH DEPTHS BETWEEN A MAXIMUM OF 7'-0" AND A MINIMUM OF 5'-0" MUST HAVE A CONCRETE CONE FOR THE TOP SECTION.
5. ALL MANHOLE JOINTS MUST BE SEALED WITH AN ACCEPTABLE JOINT SEALING COMPOUND REGARDLESS OF WHETHER AN O-RING GASKET IN A PREFORMED GROOVE IS USED.
6. FILTER FABRIC SHALL BE NON-WOVEN FABRIC PER D.O.T. SPECIFICATION SECTIONS 514 AND 985 AND SHALL BE WRAPPED ENTIRELY AROUND THE #57 STONE.

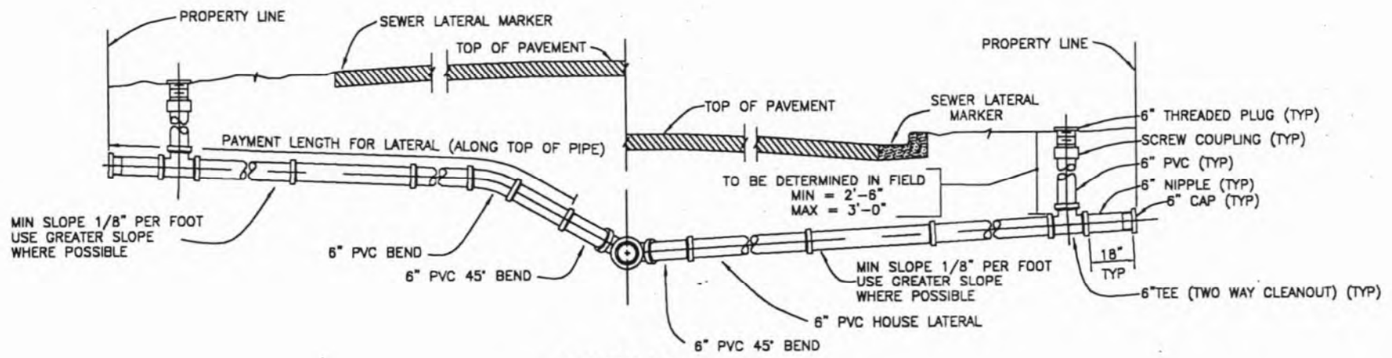
PLAN



SECTION A-A

TYPE A HOUSE LATERAL DETAIL

NOT TO SCALE

NOTES

1. THE LOCATIONS OF HOUSE LATERALS BY SYMBOLS ON PLANS ARE APPROXIMATE ONLY AND THE ACTUAL LOCATION AND SLOPES WILL BE DETERMINED IN THE FIELD BY THE CONTRACTOR WITH THE APPROVAL OF THE ENGINEER.
2. THE MINIMUM DIAMETER OF ALL HOUSE LATERALS SHALL BE 6".
3. HOUSE LATERALS WHICH PASS UNDER DRAINAGE DITCHES WITH LESS THAN 18" OF COVER OR WHICH HAVE LESS THAN 30" OF COVER UNDER PAVEMENT, SHALL BE CLASS 54 POLY-LINED DIP PER SPECIFICATIONS.
4. THE DEPARTMENT'S STANDARD REGARDING VERTICAL PERPENDICULAR CONFLICTS REQUIRES THAT THERE BE A MINIMUM OF 18" CLEARANCE BETWEEN HOUSE LATERALS AND ALL CROSSING UTILITIES. IF, HOWEVER, CONDITIONS DICTATE THAT IT IS IMPOSSIBLE TO MEET THIS STANDARD, THE FOLLOWING NOTES ARE INTENTED TO ADDRESS THE MOST COMMON CONFLICT CONDITIONS.
5. THE MINIMUM CLEARANCE BETWEEN HOUSE LATERALS AND WATER LINES SHALL BE 6" UNDER ALL CIRCUMSTANCES. IF THE HOUSE LATERAL IS BELOW A WATER LINE AND HAS BETWEEN 6" AND 18" OF CLEARANCE OR IF THE LATERAL IS ABOVE THE WATER LINE REGARDLESS OF CLEARANCE, THEN A NOMINAL 20' LENGTH OF GREEN AWWA CLASS 150 C900 PVC PIPE SHALL BE CENTERED OVER/UNDER THE WATER LINE.
6. IF THE HOUSE LATERAL MUST PASS OVER ANY UTILITY OTHER THAN A WATER LINE WITH LESS THAN 18" CLEARANCE, THE LATERAL SHALL REMAIN SDR 35 PVC PIPE.
7. IF THE HOUSE LATERAL MUST PASS UNDER ANY UTILITY OTHER THAN A WATER LINE WITH LESS THAN 18" CLEARANCE, THE LATERAL SHALL REMAIN SDR 35 PVC PIPE UNLESS THE UTILITY POSES A STRUCTURAL LOAD TOO GREAT FOR THE PVC LATERAL. IF THE UTILITY POSES SUCH A STRUCTURAL LOAD AS DETERMINED BY THE ENGINEER, EACH CONFLICT WILL BE REVIEWED ON A CASE BY CASE BASIS.
8. TRANSITIONS FROM SDR 35 PVC TO EITHER C900 OR DUCTILE IRON PIPES SHALL BE MADE WITH PVC RIGID ADAPTORS. TRANSITIONS FROM SDR 35 PVC TO EITHER EXISTING CLAY OR CONCRETE PIPES SHALL BE MADE WITH FERNCO FLEXIBLE ADAPTORS OR EQUAL.

DETAIL OF JACKED CROSSINGS

NOTES:

1. PAYMENT FOR ADDITIONAL CRUSHED STONE OR CLASS D CONCRETE PIPE BEDDING MATERIALS WILL BE MADE ONLY FOR PIPE BEDDING NOT SHOWN IN THE PLANS AND ORDERED IN WRITING BY THE ENGINEER.
2. PAYMENT FOR SURFACE RESTORATION WILL MADE FOR THE ACTUAL QUANTITIES, AS DETERMINED BY THE ENGINEER, OF SURFACE RESTORED WITHIN THE PAYMENT LIMITS SHOWN.
3. PAYMENT FOR ADDITIONAL SAND OR CRUSHED STONE FOR TRENCH STABILIZATION, ORDERED IN WRITING BY THE ENGINEER, WILL BE MADE FOR THE ACTUAL COMPACTED VOLUME, AS DETERMINED BY THE ENGINEER, OF SAND OR CRUSHED STONE PLACED WITHIN THE PAYMENT LIMITS SHOWN.
4. CONTRACTOR SHALL USE ALL SURPLUS SAND, APPROVED AS SUITABLE, FROM EXCAVATIONS IN THIS CONTRACT PRIOR TO SUPPLYING SAND FROM OTHER SOURCES. PAYMENT FOR ADDITIONAL SAND WILL BE MADE ONLY FOR SAND SUPPLIED FROM SOURCES OTHER THAN EXCAVATIONS IN THIS CONTRACT. SEE SPECIFICATIONS FOR MATERIALS REQUIREMENTS.

ENVIRONMENTAL RESOURCE PERMIT (ERP)

DRAFT DRAINAGE DESIGN REPORT – REVISION LOG

This revised drainage design report is intended to make changes to the stormwater connection at the intersection of W. Gray Street at N. Westland Avenue. The revision log below depicts sections in the report which have been modified, since the previous ERP submittal in April, 2019.

Report Section	Description of Changes
Section 1.0. Introduction	Section modified to depict revised project limits.
Figure 1. Aerial Location Map	Figure modified to depict revised project limits.
Figure 2. Modified Existing Conditions Basin	Figure modified to depict revised project limits.
Figure 3. Modified Proposed Conditions Basin	Figure modified to depict revised project limits.
Table 2. Modified Proposed Model Hydrological Parameters	Table modified to reflect revised basin names, due to the changes outlined in Section 1.0.
Table 3. Modified Proposed Combined Model Hydrological Parameters	Table modified to reflect revised basin names, due to the changes outlined in Section 1.0.
Figure 5. Existing Basin Node/Link Map	Figure modified to depict revised project limits.
Figure 6. Proposed Basin Node/Link Map	Figure modified to depict revised project limits.
Table 4. Proposed Box Culvert Locations and Dimensions	Table modified to reflect revised project limits and updated maximum flowrates.
Section 2.7. Model Results	Section modified to reflect revised project limits.
Table 5. Peak Stages at Nodes	Table modified to reflect revised project limits and updated peak stages.

Figures 7A, 7B, and 7C. Existing Flooding Conditions	Figures modified to reflect revised project limits.
Figures 8A, 8B, and 8C. Proposed Flooding Conditions	Figures modified to reflect revised project limits and updated flooding conditions.
Section 3.2.1. Nutrient Separating Baffle Boxes	Section modified to reflect revised baffle box locations due to revised project limits.
Table 7. Estimated Nutrient Reductions	Table modified to reflect revised baffle box locations due to revised project limits.
Figure 9. Proposed Water Quality Improvements Map	Figure modified to reflect revised project limits and revised baffle box locations.
Appendix B. HGL Profiles	Appendix modified to reflect revised project limits and updated modeling results.

EXECUTIVE SUMMARY

The Cypress Street Outfall Regional Stormwater Improvements project consists of approximately 11.6 acres of project area. The project site is part of an approximately 220-acre watershed, located west of the Hillsborough River, within the West Tampa and Hyde Park neighborhoods, in the City of Tampa, Hillsborough County, Florida (Sections 22 and 23, Township 29 South, Range 18 East). The location of the project area and contributing watershed are shown in **Figure 1** and **Figure 2**, respectively.

The City of Tampa is implementing these stormwater infrastructure improvements to reduce flooding at both a regional and local level. The Cypress Street Outfall Regional Stormwater Improvements project is the second phase of a regional box culvert system, aimed at this flood reduction.

This project will be implemented by routing stormwater through a box culvert system along W. Gray Street, N. Rome Avenue, and W. Cass Street, where this project will connect to the first phase, which routes this stormwater north along North Boulevard, and east along Cypress Street, where it ultimately discharges into the Hillsborough River.

1.0 INTRODUCTION

The City of Tampa (City) has retained the Woodruff & Sons / Tetra Tech Design-Build team for the design and construction of the Cypress Street Outfall Regional Stormwater Improvements project. In addition to the stormwater improvements proposed in the executive summary, this project also makes improvements to potable water distribution and transmission mains, sanitary sewer, fiber optic, as well as roadway, signing, and signalization upgrades. The stormwater portion of the project connects to an existing box culvert at the intersection of W. Gray Street at N. Westland Avenue and it travels east to N. Rome Avenue; N. Rome Avenue from W. Kennedy Boulevard north to W. Cass Street; and W. Cass Street from N. Rome Avenue east to North Boulevard.

This multi-phase regional box culvert system received an Environmental Resource Permit (ERP) through the Southwest Florida Water Management District (SWFWMD) in February, 2015 (permit # 43041855.000). This permit consisted of an ERP for phase I (North Boulevard and the outfall at the Hillsborough River, W. Cass Street, and N. Rome Avenue), as well as a conceptual ERP for phase II (W. Gray Street) and phase III (N. Westland Avenue).

This report has been modified to remove modeling assumptions for the proposed phase III improvements along N. Westland Avenue and the proposed box culvert west of N. Westland Avenue, as the City of Tampa no longer intends to construct these infrastructure improvements. Connections to the existing box culverts are proposed at these locations. In the case that the City of Tampa wishes to construct these improvements in the future, the City will apply for a permit modification.

Tetra Tech has prepared the refined Hydrologic and Hydraulic (H&H) Modeling for this project to document the H&H modeling effort for the stormwater improvements.

Three design storms (mean annual, 5-year / 24-hour and 25-year / 24-hour) have been modeled and evaluated, based upon the unique needs of the project. The mean-annual storm and the 5-year / 24-hour storm were evaluated to address City standards, and to ensure that the flooding attributed to more frequent storms was addressed. The 25-year / 24-hour storm was also evaluated to meet the conditions of the Cooperative Funding Agreement set forth between both the City and SWFWMD. These design storms were modeled using the proposed stormwater improvements, including box culverts along W. Gray Street, N. Rome Avenue, and W. Cass Street, which convey water to the outfall on W. Cypress Street, and ultimately discharge into the Hillsborough River (**Figure 1**).

The project requires a detailed review and refinement of the previous stormwater conceptual model performed by Dyer, Riddle, Mills, and Precourt, Inc. (DRMP) for the City. The conceptual models (existing and proposed) were developed in the Expert Stormwater and Wastewater Model (XP-SWMM) 2D platform and used ‘large sub-basin’ concepts. The conceptual models’ full watershed encompasses approximately two (2) square miles, which is bound on the north by I-275, on the south by W. Swann Avenue, on the west by S. Habana Avenue, and on the east by the Hillsborough River. The refinement of the conceptual model divides some of the drainage basins to distribute flows along the proposed primary conveyance system.

For the refinement of the H&H models in XP-SWMM, the following tasks were performed:

a. Further delineation of the basins to establish drainage divides and flow through the conveyance system from the conceptual models (existing and proposed);

b. Refinement of the land use and soil data, as well as other hydraulic inputs (existing and proposed models) within the areas draining to the corridor for the Cypress Street Outfall;

c. Model simulation for the mean-annual, 5-year / 24-hour, and 25-year / 24-hour storms and analysis of the results; and

d. Verification of the proposed primary and secondary conveyance systems.

2.0 H&H MODEL REFINEMENT

Tetra Tech received the conceptual model in version 10.5 of XP-SWMM 2000 on June 15, 2018. Tetra Tech utilized version 15.0 [12.0] of XP-SWMM 2014 for the refinement. ArcGIS 10.4 was utilized for the refinement of the hydrological and hydrodynamic data.

2.1 DELINEATION OF BASINS

Tetra Tech delineated the basins based upon the best available information, including aerial photography, LiDAR topography, field observations, and survey data. The LiDAR topography is a combination of the years 2004 and 2008 and covers the existing model basin area (Source: Florida Division of Emergency Management). The elevation of the project area ranges from 23 ft. NAVD (west) to 9 ft. NAVD (east). Arc-Hydro (used in ArcGIS) was initiated to delineate the basins from the LiDAR topography. The new basins in the project boundary were verified and adjusted using the contours, aerial photography, field observations, and survey data. The existing basins, inside the Cypress street corridor and abutting it, were created as larger basins with each collection of stormwater inlets receiving runoff from the associated basin.

In XP-SWMM, surface runoff from a watershed is routed to the stormwater system via nonlinear reservoir technology. The flow rate from a catchment is directly related to the watershed slope, overland flow surface roughness, depression storage, and width parameter. The watershed width for a given basin is found by dividing the watershed area by the longest flow path (SWMM user manual, 2014). This methodology was adopted for this model refinement.

The full watershed area was delineated to the watershed which drains to the project area. The project area watershed was divided into 13 basins for the existing conditions (**Figure 2**). The drainage basin is defined as the system associated with road and parcel drainage: the stormwater pipes, catch basins, curbs and gutters, storm leads, and service connections.

The proposed basins were further delineated with the use of LiDAR topography, field observations, and survey data, and are displayed in **Figure 3**. The project area was divided into 81 basins for the proposed conditions. The existing and proposed basins include business and commercial development, residential homes, paved roads, parks, and institutional developments.

2.2 HYDROLOGICAL COMPONENT

Land cover within a watershed affects the quantity and timing of runoff. Each land use generates a different quantity of runoff due primarily to the amount of impervious area within that land cover. The land use map for this project area is shown in **Figure 4**. The impervious area input into the XP-SWMM model is, by definition, hydraulically connected to the drainage systems being analyzed. This directly connected impervious percentage includes driveways, rooftops, and parking areas that are directly connected to the stormwater collection system. Runoff from the portion of a rooftop draining onto adjacent pervious areas was not treated as connected impervious area.

P:\IER\55595\200-55595-18001\GIS\maps\SWMemo\ALLUF4.mxd [betty.morris 12/30/2020]

Land use information obtained from SWFWMD was utilized to represent the imperviousness of the site. The percentage of imperviousness is referenced from TR-55 for the urban areas. There are three types of land use for the existing basin: 'commercial and services', 'open land/space,' and 'residential high density'. For the proposed basin, 'open land/space' was changed to 'commercial and services', as most of these locations are developed as apartment complexes. **Tables 1** and **2** show the modified hydrological parameters.

To directly compare peak stages between the conceptual model and the updated proposed model, the nodes along the streets in the project area remained the same as in the conceptual model. The delineated basins were combined and assigned to the closest node, and the hydrological parameters were averaged on a weighted basis. **Table 3** reflects the hydrological parameters for the merged basins.

The average watershed slope was calculated in GIS using Arc-Hydro tools. The methodology for calculating the watershed slope for the updated areas is the same methodology that was used in the conceptual XP-SWMM model. The area-weighted average watershed slope (feet/feet) for each basin for proposed conditions was estimated using GIS and a digital elevation model (DEM) using the same basin.

2120	3.25	74	0.81	0.81

2.3 HYDRAULIC ROUGHNESS

Hydraulic roughness was incorporated into the model using Manning's roughness coefficients across the basin model. The conceptual existing model considers a global value of 0.02. In the modified existing and proposed models, the roughness coefficients were unchanged.

2.4 HYDRAULIC MODEL PARAMETERS

2.4.1 Existing Conditions

A node-link network approach was set up in the XP-SWMM model to simulate the stormwater collection and conveyance system throughout the project area. **Figure 5** shows the existing basin node and link map for the entire basin. The existing conditions XP-SWMM model includes the structures from structural inventory (surveyed by City of Tampa Stormwater Division, summarized in "Spanishtown Creek Basin Study, 2004"). Inlets inventory were extracted from the City's GIS database program. For this project, Hyatt Survey Services, Inc., has conducted a stormwater, sewer, and utility survey within the project boundary. This information was incorporated in the model.

2.4.2 Proposed Conditions

The proposed conditions model includes the proposed box culvert structures for the project area. The proposed link/node map for the project area is shown in **Figure 6**. The proposed box culvert locations proposed along W. Gray Street, N. Rome Avenue, and W. Cass Street are represented in **Figure 6**.

2.5 DESIGN RAINFALL

The model refinement was conducted based upon the 25-year / 24-hour storm event which was required by the City to meet the contractual obligation under the cooperative funding agreement with SWFWMD. The design rainfall was implemented for the processing of iterative model runs to ensure that the results concur with known flood conditions that have been provided by the City. The model also simulated the mean annual and 5-year / 24-hour rainfall events.

2.6 BOUNDARY CONDITION

The boundary conditions for the modified existing and proposed models were taken from the conceptual models provided by the City. The main north-south stormwater trunk lines located along N. Oregon Avenue and N. Rome Avenue flow south and connect to the W. Cleveland Street trunkline, which ultimately flows southeast to the Hillsborough River / Hillsborough Bay. This project changes that flow from south to north by connecting to the existing system at the intersection of W. Cass Street and North Boulevard, with the outfall on W. Cypress Street discharging into the Hillsborough River.

2.7 MODEL RESULTS

Tables 4 and **5** indicate the modeling results for the project area. **Figure 7a**, **Figure 7b**, **Figure 7c**, **Figure 8a**, **Figure 8b**, and **Figure 8c** indicate the flood depth for the project area, for the given storm event.

The City of Tampa no longer intends to construct the future phase III (N. Westland Avenue) improvements or upsize the existing box culvert west of N. Westland Avenue. The intent of phase III was to replace the existing 36" x 54" box culvert flowing east along W. Gray Street, then south along N. Westland Avenue, and reversing the flow with a proposed 10' x 5' box culvert flowing from south to north and connecting to the 10' x 7' box culvert flowing from west to east along W. Gray Street. Presently, there is minor flooding at the intersection of W. Gray Street at N. Westland Avenue. This project proposes to connect an overflow manhole to the upstream side of the existing 36" x 54" box culvert flowing from north to south along N. Westland Avenue. This overflow manhole will be utilized during rain events when the existing 36" x 54" box culvert backs up, allowing stormwater to overflow into the proposed box culvert system and help to reduce flooding at this intersection. Connections to the existing box culverts are proposed at this intersection. In the case that the City of Tampa wishes to construct these improvements in the future, the City will apply for a permit modification.

There is an existing 4'x4' box culvert flowing from north to south along N. Rome Avenue, and south through the intersection of W. Kennedy Boulevard. This project proposes to replace a portion of this existing box culvert along N. Rome Avenue, and reversing the flow with a proposed 10' x 5' box culvert flowing from south to north. Presently, there is minor flooding present at the intersection of N. Rome Avenue at W. Kennedy Boulevard. This project proposes to connect an overflow manhole to the upstream side of the existing 4'x4' box culvert flowing from north to south along N. Rome Avenue. This overflow manhole will be utilized during rain events when the existing 4' x 4' box culvert backs up, allowing stormwater to overflow with a short section of 48" RCP flowing north. This 48" RCP will connect to the proposed 10' x 5' box culvert flowing from south to north along N. Rome Avenue, and help to reduce flooding at this intersection.

These proposed overflow connections were modeled as a part of this report, and no adverse impacts are anticipated.

Due to inclusion of box culverts and inlets in the proposed conditions, the flooding condition is improved, and no significant flooding is observed. As previously mentioned, the conceptual stormwater models (existing and proposed) were developed by others for the City, using 'large sub-basin' concepts. Tetra Tech refined these conceptual models by further delineating the basins, as well as verifying and modifying the proposed conveyance systems. As shown in the flood depth figures, the existing and proposed flooding conditions are close to that of the conceptual modeling. **Tables 4 and 5** reiterate this fact, and actually show a slight reduction in most flooding conditions in the refined models. **Appendix B** depicts the proposed hydraulic grade line (HGL) profiles for the 25-year / 24-hour storm for W. Gray Street, N. Rome Avenue, and W. Cass Street. These HGL profiles are indicative towards flooding improvement and show that for even the 25-year 24-hour storm event, all grade lines stay within the proposed box culvert system, and therefore, no adverse impacts are anticipated.

3.0 WATER QUALITY

3.1 SUMMARY

This project is a retrofit design aimed at flood protection. As a part of this project, road-dieting and multi-modal transportation were implored. As a result, the typical roadway sections differ between the existing and proposed conditions. The comparison between the existing and proposed conditions are summarized in **Table 6**.

Table 6. Impervious and Semi-Impervious Areas Summary

Area	Existing Conditions (SY)	Proposed Conditions (SY)	Difference (SY)
Vehicular Use Area (VUA)	33,380	24,880	- 8,500
Sidewalk	5,240	8,780	+ 3,540
Parking (Impervious)	1,990	0	- 1,990
Parking (Pervious Pavement)	0	1,620	+1,620
Cycle Track/Bike Lanes	0	5,330	+ 5,330
Traffic Separator and Misc.	0	560	+ 560
Total	40,610	41,170	+ 560

Although the total impervious area for the project has increased slightly, there is an immense reduction in the project's Vehicular Use Area (VUA), which would incline to a reduction in the project's overall pollutant area.

As part of this retrofit and flood protection project, Best Management Practices (BMP), including low-impact development (LID), were employed to aid in the reduction of peak flowrates, and increase water quality by serving to achieve nutrient load reductions for discharges into the Hillsborough River.

3.2 TYPES OF PROPOSED TREATMENT BMP'S

3.2.1 Nutrient Separating Baffle Boxes

Nutrient separating baffle boxes, otherwise known as second generation baffle boxes, have chambers with partitions connected to a storm drain. Stormwater flows into the first section of the box through the inflow pipe, where most pollutants settle out. Water then overflows into the next section to allow further settling before the water ultimately overflows to the stormwater outflow pipe. Floating trays within the baffle box capture leaves, grass clippings, and litter to prevent them from dissolving in the stormwater. Bold and Gold® media is added to the baffle box to create a denitrification environment, which increases total nutrient removal. The use of this media can increase efficiencies and nutrient removals as summarized in **Table 7**.

The Suntree nutrient separating baffle box is recommended for this project. Model NSBB-5-10 accommodates pipe sizes from 12 inches to 30 inches, which fits the 24-inch stormwater pipes which are proposed at the Freemont and Willow locations. We are proposing a model NSBB-8-16 for the Westland location to accommodate the 54-inch stormwater pipe. The Florida Department of Environmental Protection approved nutrient removal efficiencies for a nutrient separating baffle box are 19.05% for TN and 15.5% for TP. To maximize water quality benefits, Tetra Tech recommends adding Bold and Gold® to the baffle boxes.

Table 7. Estimated Nutrient Reductions from Proposed Baffle Boxes

Location	Acres Treated	TN Existing Load (lbs/yr)	TN Efficiency	TN Reduction (lbs/yr)	TP Existing Load (lbs/yr)	TP Efficiency	TP Reduction (lbs/yr)	Inflow Pipe (in)	Outflow Pipe (in)
N. Westland Avenue	73.2	806.2	19.05%	154	159.3	15.50%	25	54	54
N. Westland Avenue plus Bold and Gold®	73.2	806.2	55.00%	443	159.3	65.00%	104	54	54
N. Freemont Avenue	28.8	356.5	19.05%	68	75.1	15.50%	12	24	24
N. Freemont Avenue plus Bold and Gold®	28.8	356.5	55.00%	196	75.1	65.00%	49	24	24
N. Willow Avenue	12.2	211.1	19.05%	40	30.4	15.50%	5	24	24
N. Willow Avenue plus Bold and Gold®	12.2	211.1	55.00%	116	30.4	65.00%	20	24	24

3.2.2 Pervious Pavement

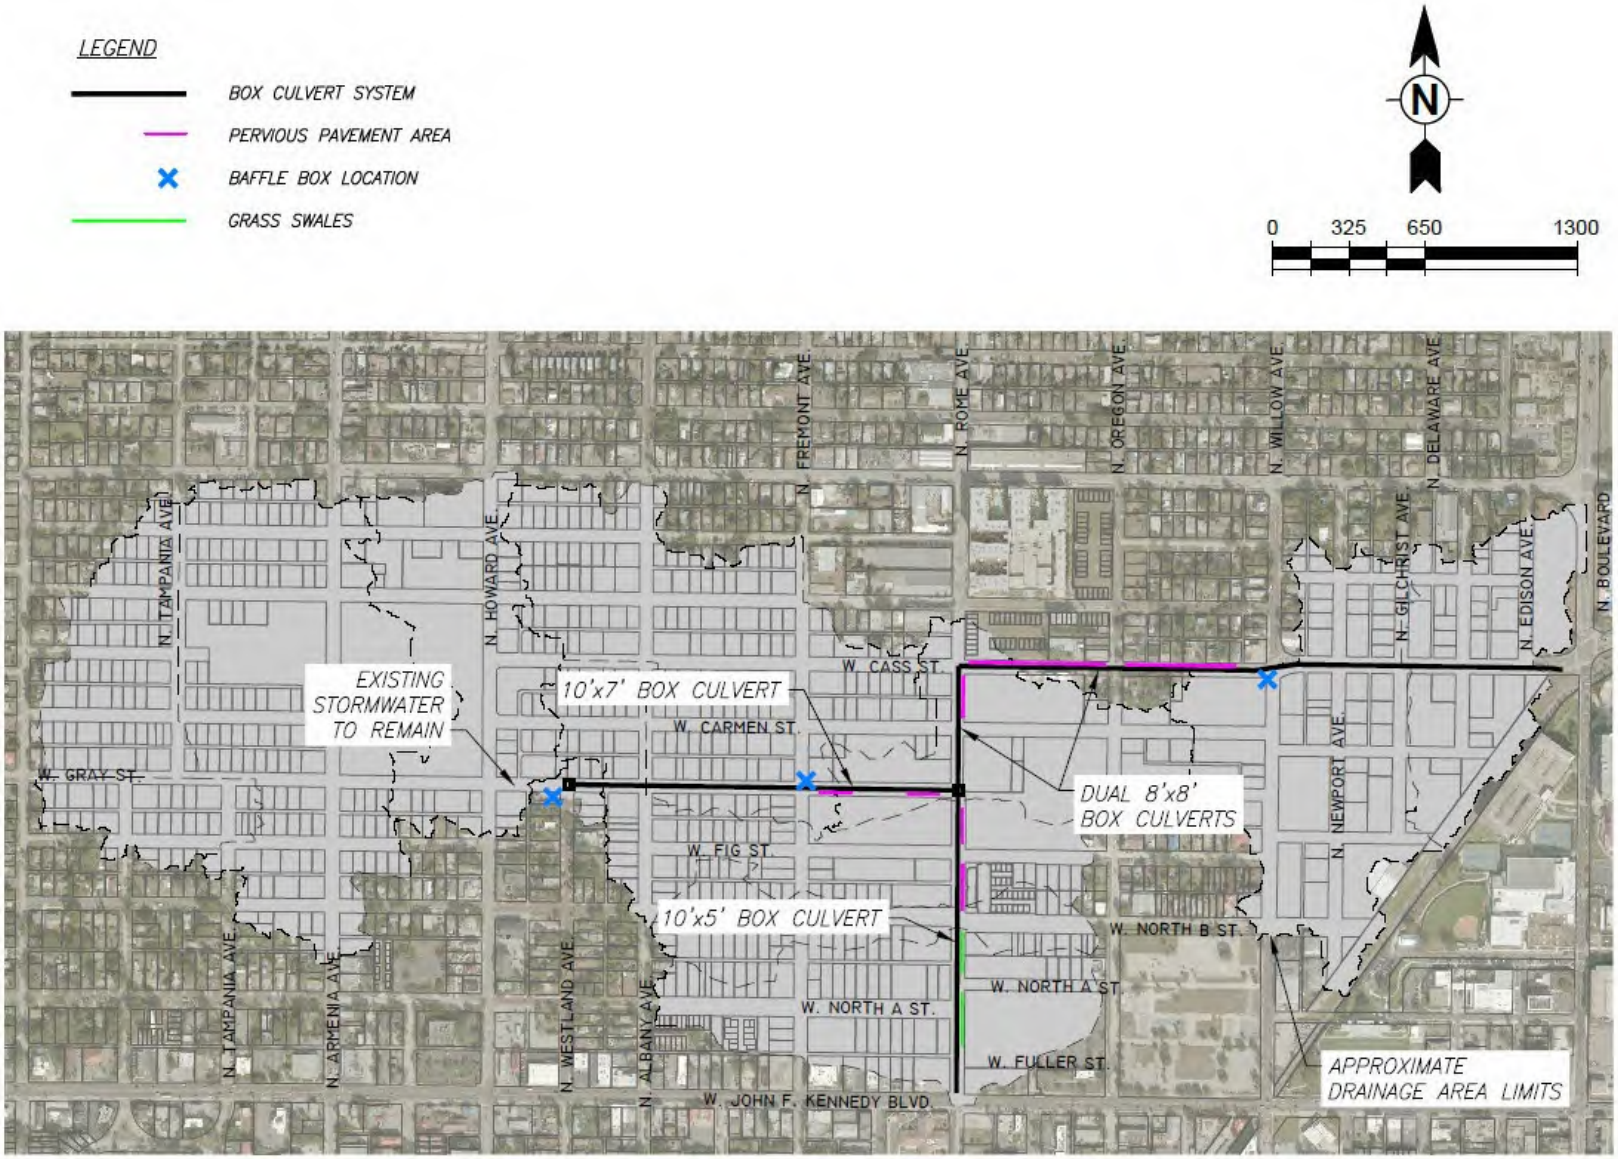
Pervious pavement is an asphalt with increased void space, which allows for surface water to percolate through the pavement rather than accumulate atop it. This provides a water quality benefit by reducing stormwater discharge to the Hillsborough River, as well as reducing pollutants in the stormwater runoff by allowing it to naturally filter into the ground.

This project proposes replacing all existing impervious parking area within the project limits, with new pervious pavement.

3.2.3 Grass Swales

This project proposes grass-lined swales along portions of N. Rome Avenue for additional treatment and nutrient removal. The swales provide a water quality benefit by reducing pollutants in the stormwater runoff by allowing it to attenuate and naturally filter into the ground.

Figure 9. Proposed Water Quality Improvements Map



4.0 CONCLUSION

The proposed drainage improvements associated with the Cypress Street Outfall Regional Stormwater Improvements project were designed to properly capture and convey stormwater runoff to reduce structural, yard, and street flooding for the design storm events. Existing and proposed H&H models were refined from conceptual models developed by others for the City, using the XP-SWMM Version 10.5 modeling software. Hydrologic and hydraulic parameters were updated to more accurately represent the project site. The proposed stormwater improvements include box culvert structures that run along the streets of W. Gray Street, N. Rome Avenue, and W. Cass Street. This new system will connect to the existing stormwater system on W. Cass Street, and ultimately discharge at the Cypress Street outfall into the Hillsborough River.

Subject: Geotechnical Engineering Services Report
Cypress Street Outfall Regional Stormwater Improvements
City of Tampa, Florida
MC² Proposal No. T041704.066

Dear Mr. Anderson:

MC Squared, Inc. (**MC²**) has completed our Geotechnical Engineering Services Report for the proposed improvements associated with the referenced project. This study was performed in general accordance with **MC²** Proposal No. T041704.066 dated September 25, 2017 (Revised October 17, 2017). These services included a subsurface exploration, laboratory testing, and our evaluation of the data and geotechnical recommendations for project design and construction.

We trust that this report will assist you in further design development and construction of the subject project. We appreciate the opportunity to be of service to you on this project. Should you have any questions and/or require further information, please do not hesitate to contact us.

Respectfully submitted,
MC Squared, Inc.

1.1 Project Authorization

Authorization to proceed with this project was issued by **Woodruff & Sons, Inc. (Woodruff)** through a Professional Services Agreement dated May 21, 2018. Our services were performed in general accordance with **MC²** Proposal No. T041704.066.

1.2 Project Description

Project information was provided by Mr. Matt Anderson, PE of **Woodruff** and Mr. Thomas Cross, PE from **Tetra Tech** through e-mailed and verbal communications. Based on our understanding, the purpose of our services is to provide geotechnical data and information to aid in the design of the Cass Street/Rome Avenue/Gray Street Stormwater Line Design-Build Project to alleviate flooding in the area. The project is located entirely within the City of Tampa, Florida and consists of two (2) segments of reinforced concrete box (RCB) culverts with varying dimensions and configurations. The combined length of the two (2) segments is approximately 8,750-LF. Two (2) junction boxes have been assumed, one (1) each at the intersections of Cass Street and Rome Avenue and Rome Avenue and Gray Street. Other features of the project include water mains (36" and 8" diameter) that will run parallel to the RCB culverts, and signalization modifications including up to four (4) mast arms at the intersection of West Cass Street and North Willow Avenue. The project also includes the replacement of the impacted roadways and utilities and maintaining existing traffic throughout the project limits.

Figure 1: Project Alignment (Google Earth, photographed on January 11, 2017)

If any of this project description is incorrect or has changed, please inform **MC²** so that we may amend, if appropriate, the recommendations presented in this report.

1.3 Scope of Services

To achieve our assigned objectives, we performed the following services:

1. Reviewed printed literature and readily available published documents pertaining to the project site including topographic maps, aerial photographs and groundwater information. **MC²** has included summaries of our review of the United States Geological Services (USGS) Topographical maps, United States Department of Agriculture (USDA) Soil Survey and Southwest Florida Water Management District (SWFWMD) Potentiometric Surface Data.

2. Conducted a visual reconnaissance of the project site. Cleared utilities in the vicinity of the proposed boring locations through Sunshine811. Attained required permits through the City of Tampa (COT) in order to perform our field exploration.

3. Performed a total of ten (10) pavement cores with a subsequent hand auger to explore the thicknesses of the base course along the project alignment at locations approved by **Woodruff** and **Tetra Tech** personnel.

4. Performed a total of twenty-one (21) Standard Penetration Test (SPT) borings to depths ranging from 25 to 40-ft. below the ground surface (bgs) along the project alignment at locations approved by **Woodruff** and **Tetra Tech** personnel. Information regarding subsurface conditions are contained in **Section 5** and in the **Appendix**.

5. Visually examined recovered soil samples and performed laboratory tests on selected representative samples to develop the soil legend for the project using the American Association of State Highway and Transportation (AASHTO) classification system and Unified Soil Classification System (USCS), as appropriate. Shelby tubes were used to collect samples where cohesive material was encountered. Testing included natural moisture content, grain size analysis (-200 sieve), organic content, Atterberg Limits, corrosion and consolidation.

6. Prepared a summary of results, along with evaluations and recommendations for the proposed construction and design.

The scope of our services did not include an environmental assessment for determining the presence or absence of wetlands or hazardous or toxic materials in the soil, bedrock, groundwater, or air, on or below or around this site. Any statements in this report or on the boring logs regarding odors, colors, unusual or suspicious items or conditions are strictly for the information of our Client. Additionally, this was not a sinkhole investigation. Accordingly, our field exploration was not designed to address sinkhole-related issues. Any mention of geological characteristics in relation to karst conditions is for information purposes only.

2 SITE CONDITIONS

2.1 Site Features

The project site is located within the City of Tampa, Florida. The project alignment is along paved roadways with sidewalks along the majority of the roads and is generally clear of obstructions. Overhead trees and power lines are scattered along the project alignment. The project is lined primarily with residential homes and commercial businesses.

Figure 2: Intersection of W. Gray Street and Tampania Avenue (photographed July 2, 2018)

2.2 Hillsborough County Soil Survey

We reviewed the USDA Soil Conservation Service's *Soil Survey of Hillsborough County, Florida* for general information on the shallow soils in the vicinity of the site. The survey area data is Version 16 dated October 4, 2017, with aerial images photographed from December 19, 2013 to January 17, 2014. The USDA Soil Conservation Service Soil Survey outlines approximate areas dominated by a particular shallow soil type. Small areas of other soils may occur within the mapping unit.

The project area is within four (4) mapping units: Immokalee-Urban land complex (22), Myakka-Urban land complex (32), Tavares-Urban land complex, 0 to 5 percent slopes (55) and Urban land (56).

Immokalee-Urban land complex (22) has a parent material of sandy marine deposits with a typical profile of fine sand from zero to 80-in. bgs. The material is poorly drained and has a moderately high to high capacity to transmit water. The depth to water table is about 6 to 18 inches.

Myakka-Urban land complex (32) has a parent material of sandy marine deposits with a typical profile of fine sand from zero to 80-in. bgs. The material is poorly drained and has a moderately high to high capacity to transmit water. The depth to the groundwater table is about 6 to 18 inches.

Tavares-Urban land complex, 0 to 5 percent slopes (55) has a parent material of eolian or sandy marine deposits with a typical profile of fine sand from zero to 80-in. bgs. The material is moderately well drained and has a very high capacity to transmit water. The depth to the groundwater table is about 42 to 72 inches.

Urban land (56) is land that has been heavily impacted by development and construction. Because of this, general soil characteristics cannot be assigned due to the high variability throughout the area.

The USDA Soil Survey is not necessarily an exact representation of the soils on the site. The mapping is based on interpretation of aerial maps with scattered shallow borings for confirmation. Accordingly, borders between mapping units are approximate and the change may be transitional. Differences may also occur from the typical stratigraphy, and small areas of other similar and dissimilar soils may occur within the soil-mapping unit. Additionally, urban development and drainage features may also affect soil types encountered and groundwater table depths. As such, there may be differences in the mapped description and the boring descriptions obtained for this report. The survey is, however, a good basis for evaluating the shallow soil conditions of the area. The USDA Soil Map is contained in the **Appendix.** The following ***Table 1*** summarizes the soil survey data within the project area.

Table 1: Summary of USDA Soil Survey

Roadway Name	Approximate Station Limits*	USDA Soil Classifications	USDA SHW Depth (in)
W. Gray Street	80+00 to 90+00	Tavares-Urban land complex (55)	42 to 72
	90+00 to 106+00	Myakka-Urban land complex (32)	6 to 18
	106+00 to 115+00	Urban land (56)	-
N. Rome Avenue	9+50 to 30+00	Urban land (56)	-
W. Cass Street	40+00 to 47+00	Urban land (56)	-
	47+00 to 53+50	Myakka-Urban land complex (32)	6 to 18
	53+50 to 55+00	Urban land (56)	-
	55+00 to 60+00	Immokalee-Urban land complex (22)	6 to 18
	60+00 to 69+00	Urban land (56)	-

*Stationing is based on site plans provided by **Woodruff** dated April 11, 2017. Areas near station limits are prone to variation in the soil characteristics due to transitioning between mapping units.

2.3 Topographic Survey

We reviewed readily available published USGS historical topographic maps titled "Tampa Quadrangle Florida-Hillsborough Co. 7.5-Minute Series" for the project alignment. These indicated a gradual change in elevation along the project alignment where the site is generally sloped downwards going east as summarized in the following ***Table 2***. Based on our review of the

historical topographical maps, there appears to be no distinctive change in elevation over time that would require further investigation.

Table 2: Summary of USGS Topographic Maps

Roadway Name	Approximate Station Limits*	USGS Approximate Surface Elevation Range** (ft)
W. Gray Street	80+00 to 100+00	20 to 25
	100+00 to 114+00	15 to 20
N. Rome Avenue	9+50 to 31+29	15 to 20
W. Cass Street	40+00 to 63+00	15 to 20
	63+00 to 72+12	10 to 15

*Stationing is based on site plans provided by **Woodruff** dated April 11, 2017.
**Elevations are referenced to the NGVD 1929 datum

2.4 Potentiometric Information

The SWFWMD database for potentiometric information shows that the potentiometric surface in 2011 is at approximately 10-ft. in elevation along the project alignment. Artesian flow conditions were not encountered within the borings performed during the field exploration. The contractor should be prepared to handle potentiometric surface levels up to an elevation of 10-ft.

3 FIELD EXPLORATION PROGRAM

3.1 General

The field exploration program consisted of performing twenty-one (21) SPT borings, two (2) at the proposed junction boxes locations, fifteen (15) along the proposed culvert alignment approximately every 500-ft., and four (4) to support the design of the new signalization mast arms. Ten (10) pavement cores were also performed along the project corridor to determine the existing pavement conditions. The SPT borings were performed from July 2, 2018 to July 10, 2018; and, the pavement cores were performed from July 6, 2018 to July 9, 2018. The field exploration services were performed, observed and/or documented by **MC²'s** qualified staff geotechnical engineers and overseen by its Florida State licensed professional geotechnical engineers.

3.2 Standard Penetration Test Borings

The SPT borings were completed at the site in general accordance with ASTM D-1586 (Standard Test Method for Penetration Test and Split Barrel Sampling of Soils) using a track-mounted drill rig, automatic hammer and wet-rotary procedure. Representative soil samples were obtained using the split-barrel sampling procedure. In this procedure, a 2-in. outer-diameter split-barrel sampler is driven into the soil by a 140-lb hammer operating over a free-fall of 30-in. The number of blows required to drive the sampler through a 12-in. interval, after initial penetration of 6-in., is termed the Standard Penetration Resistance, or "N" value, and is indicated for each sample on the boring log. The "N" value provides an empirical assessment of the relative density

(cohesionless soils) or consistency (cohesive soils) of soils in-situ. The first 4 to 6-ft. in the borings were augered by hand in order to avoid encountering potentially unmarked utilities and to help in the determination of the SHWT.

Figure 3: Performing SPT Borings (photographed July 2, 2018)

During design, the N-values obtained using an automatic hammer should be corrected for overburden pressure, as the actual input driving energy is different between safety and automatic hammers. However, when using FB-Deep, the N-Values should not be corrected since the design methodology is based on uncorrected N-values. Based on the results of an **FDOT** study, a multiplier of 1.24 shall be applied when correcting N-values obtained using an automatic hammer on all projects. The corrected N-values shall be indicated as N_{ES}. The N-Values obtained in the field are represented on the **Boring Profiles** while the N_{ES}-Values are presented on the **Summary of Soil Parameters** in the **Appendix** of this report.

3.3 Pavement Core Borings

The pavement cores were performed using a 4-in. diameter core barrel that was advanced through the asphalt layer. This was followed by Hand-Auger (HA) borings through the base course and into the subbase. Information regarding these pavement cores, base course and subgrade materials is summarized in the **Appendix.** In addition, **Pavement Core Summary Reports** with photographs of the pavement cores are contained in the **Appendix**. Pavement Core CB-08 had to be removed from the core barrel in pieces.

4 LABORATORY TESTING

A representative set of soil samples were tested in the laboratory to assist in the classification and determination of engineering characteristics of the soils based on their mechanical and physical behavior. Laboratory testing was accomplished in general accordance with applicable AASHTO and ASTM procedures. Laboratory tests completed on soil samples retrieved for this project include:

- Twenty-three (23) moisture content determinations (ASTM D-2216/AASHTO T-265),
- Twenty-three (23) percent passing No. 200 sieve tests (ASTM D-1140/AASHTO T-11),
- Eleven (11) Atterberg limit determination tests (ASTM D-4318/AASHTO T-89/T-90),
- Three (3) organic content determination tests (ASTM D-2974/AASHTO T-267),
- Visual classification in general accordance with applicable procedures.

Results for each of these laboratory tests are summarized in the following ***Table 3*** and are presented on the individual **Soil Profile** logs provided in the **Appendix.**

Table 3: Summary of Laboratory Testing

Boring No. (Depth) (ft.)	Moisture Content (%)	Percent Passing –200 (%)	Organic Content (%)	Liquid Limit	Plastic Limit	Plasticity Index	USCS/ AASHTO Group
C-10 (0.5-1)	142.1	25.4	58.7	-	-	-	PT

NP = Non-Plastic

In addition to the physical property tests performed, which are summarized in ***Table 3*** herein, one (1) one-dimensional, incremental loading consolidation test was conducted in accordance with

ASTM D-2435. Incremental loading up to 8-tsf was applied to the sample to gauge the amount of displacement for each load increment. The results of the consolidation test were used to help determine the estimated total and differential settlements of the box culvert.

In addition to the above laboratory testing, environmental corrosion tests were conducted on selected representative soil samples in accordance with the FDOT test designations FM 5-550, FM 5-551, FM 5-552 and FM 5-553.Environmental corrosion tests measure parameters such as pH, resistivity, sulfate content and chloride content. Test results obtained are presented in ***Table 4*** herein below. Based on the laboratory test results and the FDOT Structures Design Guidelines, January 2018, the subsurface soil conditions range from Slightly Aggressive to Moderately Aggressive. This classification was based on Section 1.3.2 and 1.3.3 of the Structures Design Guidelines. We recommend using the applicable provisions in the FDOT Structures Design Guidelines and FDOT Standard Specifications for corrosion protection.

Table 4: Summary of Environmental Corrosion Test Results

Sample ID and Depth (ft)	pH	Resistivity (ohms-cm)	Sulfates (ppm)	Chlorides (ppm)	Individual Environmental Classification*	
					Steel	Concrete
CB-01 (4-6)	8.27	3,610	7.6	2.9	Moderately Aggressive	Slightly Aggressive
CB-02 (8-10)	7.47	7,649	0.37	1.1	Slightly Aggressive	Slightly Aggressive
CB-03 (8-10)	7.68	5,020	1.1	5.2	Slightly Aggressive	Slightly Aggressive
CB-05 (13.5-15)	7.30	4,656	7.2	3.4	Moderately Aggressive	Slightly Aggressive
CB-06 (8-10)	7.51	6,556	1.3	4.8	Slightly Aggressive	Slightly Aggressive

5 SUBSURFACE CONDITIONS

5.1 Subsurface Conditions

The descriptions presented herein are of a generalized nature to highlight the major subsurface

stratification features and material characteristics. The soil profiles included in the **Appendix** should be reviewed for specific information at individual boring locations. These profiles include soil description, stratification, penetration resistances (N-values), and laboratory test results. The stratification shown on the boring profiles represents the conditions only at the actual boring location. Variations may occur and should be expected between boring locations. The soil's relative density or consistency is based on the recorded N-Value and is summarized in the following ***Table 5***.

Table 5: Relative Density Description vs. N-Value

Granular Materials-Relative Density	**Automatic Hammer SPT (Blows/FT)**
Very Loose	< 3
Loose	3 – 8
Medium	8 – 24
Dense	24 – 40
Very Dense	> 40
Silts and Clays Consistency	**Automatic Hammer SPT (Blows/FT)**
Very Soft	< 1
Soft	1 – 3
Firm	3 – 6
Stiff	6 – 12
Very Stiff	12 – 24
Hard	> 24
SPT Spoon Inside Diameter 1 3/8"	ASTM Standard Drop Safety Hammer
SPT Spoon Outside Diameter 2"	Average Hammer Drop Height 30"
	Hammer Weight 140-lbs

Proposed Junction Boxes (Borings JB-01 and JB-02)

In general, the subsurface conditions encountered at the junction box borings JB-01 and JB-02, performed at Stations 114+50 (Rome Avenue) and 40+75 (Cass Street) respectively, consisted of loose to medium dense, poorly-graded fine SAND to fine SAND with silt (SP-SM/A-3) from the surface to 8-ft. bgs. Loose to medium dense, clayey fine SAND (SC/A-2-4) was encountered from 8-ft. to 18-ft. bgs in JB-01 and from 8 to 10-ft bgs in JB-02. The SC/A-2-4 soil encountered in JB-02 was followed by very loose to medium dense clayey fine SAND (SC/A-2-7) from 10 to 18.5-ft. bgs. Firm, lean CLAY (CL/A-7) was encountered at JB-01 from 25 to 30-ft. bgs. Highly weathered to competent LIMESTONE was penetrated in JB-01 from depths of 18 to 25-ft. bgs and 30 to 40-ft. bgs and in JB-02 from 18.5 to 40-ft. bgs. A complete (100%) loss of circulation (LOC) occurred at 23-ft. bgs at boring JB-01 and a partial (50%) LOC occurred at 37-ft. bgs at boring JB-02. It is not uncommon to have LOC events in LIMESTONE because of its porous matrix as in the case at these borings. The borings were terminated in LIMESTONE at a depth of 40-ft. bgs.

Signalization Mast Arms (Borings SB-01 through SB-04)

The conditions encountered at the signalization mast arm borings consisted of loose to medium dense, poorly-graded fine SAND to fine SAND with silt (SP-SM) from the surface to depths ranging from 8 to 15-ft. bgs. Very loose to medium dense, clayey fine SAND (SC/A-2-7) and very soft, fat CLAY (CH/A-7) was encountered to depths ranging from 13.5 to 22-ft. bgs where highly weathered to competent LIMESTONE was encountered. Borings SB-01 and SB-02 were performed to a depth of 25-

ft. bgs while SB-03 and SB-04 were performed to a depth of 30-ft. bgs to delineate the very loose/soft soil conditions encountered from 10 to 20-ft. and 15 to 23-ft. bgs, respectively. All four (4) signalization borings were terminated in competent LIMESTONE.

Cass Street (Borings CB-04 through CB-07)

The subsurface conditions encountered at the borings performed along Cass Street generally consisted of very loose to dense, poorly-graded fine SAND to fine SAND with silt (SP-SM/A-3) from the surface to depths ranging from 8 to 20-ft. bgs. Loose to medium dense, clayey fine SAND (SC/A-2-7) and very soft to very stiff, plastic CLAY (CH/A-7) was encountered beneath the surficial sands in each boring except CB-05 until highly weathered to competent LIMESTONE was penetrated at a depth ranging from 8 to 29-ft. bgs. Boring CB-05 penetrated very loose to medium dense, poorly-graded fine SAND to fine SAND with silt (SP-SM/A-3) to a depth of 8.5-ft. bgs before transitioning into competent LIMESTONE to the boring termination depth of 30-ft. bgs. The borings were terminated at depths of 30 and 35-ft. bgs in competent LIMESTONE.

Gray Street (Borings CB-09 through CB-15)

The subsurface conditions encountered at the borings performed along Gray Street consisted of very loose to medium dense, poorly-graded fine SAND to fine SAND with silt (SP-SM/A-3) from the surface to depths ranging from 4 to 25-ft. bgs. Some of the borings had layers of clayey fine SAND (SC/A-2-4, A-2-7) in-between layers of the SP-SM/A-3 soil. Underlying the SP-SM/A-3 soils, very loose to medium dense, clayey fine SAND (SC/A-2-4, A-2-6 and A-2-7), very soft to stiff, plastic CLAY (CH/A-7) and loose, silty SAND (SM/A-2-4) were encountered until highly weathered to competent LIMESTONE was encountered, ranging from 15.5 to 37.5-ft. bgs. Weight of Hammer (WOH) conditions were encountered in CB-09 (28.5 to 30-ft. and 33.5 to 36.5-ft.), CB-10 (18.5 to 24-ft.), CB-11 (13.5 to 15.5-ft.) and CB-13 (28.5-29.5-ft. and 33.5 to 34.5-ft.). The borings were terminated in competent LIMESTONE at depths of 30, 32, 35, 37 and 45-ft. bgs. The borings were extended beyond their planned depths due to loose/soft soil conditions.

Rome Avenue (Borings CB-01 through CB-03 and CB-08)

The subsurface conditions encountered at the borings performed along Rome Avenue generally consisted of loose to medium dense, poorly-graded fine SAND to fine SAND with silt (SP-SM/A-3) from the surface to depths ranging from 8 to 25-ft. bgs. Loose to medium dense, clayey fine SAND (SC/A-2-7) was encountered from 6 to 10-ft. bgs in CB-01 and from 8 to 15-ft. bgs in CB-08. Soft, plastic CLAY (CH, A-7) was encountered in CB-08 from 15 to 19-ft. bgs. Soft, lean CLAY with sand (CL, A-7) was encountered in CB-02 from 25 to 35-ft. bgs. Highly weathered to competent LIMESTONE was encountered in the borings ranging from 13.5 to 35-ft. bgs. The borings were terminated at depths of 35 and 35.5-ft. bgs in competent LIMESTONE.

5.2 Groundwater Conditions

The depth to groundwater measured in the SPT borings ranged between 3.5 to 6-ft. bgs. A summary of the borings and the estimated SHWT depth is presented in ***Table 6***.

Table 6: Summary of Groundwater Information

Boring ID	Approximate Station and Offset (ft)	Depth to Groundwater (ft)	SHWT Depth (ft)
CB-01	11+00, 15 LT	4	2
CB-02	16+00, 10 LT	3 ½	2
CB-03	21+00, 5 LT	4	2
CB-04	46+00, 15 RT	4	3
CB-05	51+00, 10 RT	4	3
CB-06	59+00, 20 LT	6	3 ½
CB-07	64+00, 20 LT	6	3
CB-08	27+00, 10 LT	3 ½	2 ½
CB-09	80+00, 5 RT	4	2 ½
CB-10	84+00, 5 RT	3 ½	2
CB-11	89+00, 10 RT	5	2 ½
CB-12	94+00, 5 RT	6	3 ½
CB-13	98+00, 5 RT	5	2 ½
CB-14	103+00, 5 RT	4	2
CB-15	108+00, 10 LT	4	2
SB-01	53+50, 40 LT	4	2
SB-02	54+50, 35 LT	3 ½	2
SB-03	54+50, 20 RT	4	2
SB-04	53+50, 40 RT	3 ½	2
JB-01	114+50, 5 LT	5	3 ½
JB-02	40+75, 15 RT	3 ½	2 ½

The SHWT data is based upon our review of the SPT borings performed near the project alignment; USDA soil survey; and, hand-auger borings performed as a part of this project.

5.3 Pavement Information

Ten (10) pavement cores were performed along the project alignment and labelled C-01 through C-10. Pavement information along the project roadways is summarized in the **Pavement Core Summary** sheets in the **Appendix** and includes thickness of the asphalt and base course materials.

6 EVALUATION AND CONCLUSIONS

The following evaluations and conclusions have been developed based on the previously described project characteristics, our review of published data, our site reconnaissance and the results of our subsurface exploration and associated laboratory testing:

1. We compared the USDA soil survey information with the shallow subsurface information collected in our test borings. The data provided in the soil survey indicates SAND from zero to 80-in. bgs. Our test borings indicated that poorly-graded fine SAND to silty SAND (A3, A-2-4) was encountered in at least the first 6-ft. in the borings. The soil survey data generally appeared similar to the soil data collected from the borings performed, taking into account site development activities over the years.

2. Our review of the USGS topographic maps did not indicate any readily visible unusual changes nor anything that appeared out of the ordinary that would require any further clarification.

3. Artesian flow conditions were not encountered within the borings performed during the field exploration. However, the contractor should be prepared to handle potentiometric surface levels up to an elevation of 10-feet.

4. Groundwater was encountered in all of the SPT borings performed. The SHWT was estimated to range from 2 to 3 ½-ft. bgs (see ***Table 6*** for SHWT determinations at individual boring locations and in the **Appendix** for the encountered water table depths at the individual SPT boring locations). The contractor should be prepared to address groundwater conditions during construction. General groundwater control recommendations are provided in **Section 7.2.1 herein**.

5. Based on our review of the data collected from the SPT borings performed, it is our opinion that the subsurface soils are suitable for supporting the proposed culvert improvements. Some densification of these soils will likely be required, and/or structural fill used to support the trunk line. In addition, we noted the following:

   - LIMESTONE was encountered in all of the SPT borings. In some borings, the LIMESTONE was encountered as shallow as 13.5-ft. bgs, which may make it difficult to perform the required open-trench excavations. The **Individual Boring Logs** in the **Appendix** and ***Table 7*** of this report should be reviewed to anticipate locations where LIMESTONE may be encountered, so that the contractor comes prepared with the appropriate excavation equipment.

   - Significant amounts of Weight of Hammer (WOH) conditions were encountered in borings CB-05 (8 to 9.5-ft.), CB-06 (23.5 to 25.5-ft.), CB-08 (13.5 to 16-ft.), CB-09 (28.5 to 30-ft.), CB-10 (18.5 to 24-ft.), CB-11 (13.5 to 15.5-ft.) and CB-13 (28.5-29.5-ft. and 33.5 to 34.5-ft.). Depending on the depth of the culvert compared to the depth of the WOH material, more than 1-ft. of over-excavation and replacement of the weak soils with structural fill may be necessary in order to obtain compaction in the bedding layer beneath the culvert.

   - The possibility of other variations in subsurface conditions, other than what was encountered in the SPT borings may exist along the project alignment.

6. Although we anticipate limited over excavation and replacement of foundation bearing soils within the footprint of the proposed trunk line, the potential that variable amounts of unsuitable soils may be encountered during construction must be accounted for and planned, as indicated herein. Clean structural fill will be required to backfill against structures. See **Section 7.2** for further recommendations on structural fill and trench preparation.

7. ***Table 7*** below summarizes the encountered materials and conditions at the proposed approximate invert depths and elevations of the box culvert. This table should be used to anticipate what could be encountered at the bottom of the culvert excavation and develop what soil improvements will be needed, if any. We have included herein below, recommendations on how unsuitable soils should be treated, if encountered during construction. It should be noted that ***Table 7*** indicates the actual subsurface soil conditions that were encountered at the specific SPT boring locations. Based on our experience, variations in these subsurface conditions in-between the SPT boring locations are quite possible and should be anticipated.

Table 7: Summary of Expected Conditions at Bottom of Box Culvert

SPT Boring ID	Approximate Station and Offset	Approximate Invert Elevation of Box Culvert (ft)/(NAVD 88)	Expected Conditions	Notes

LS = Limestone

- **Granular Soils:** Very loose to loose granular soils will require compacting in order to create a competent/level bed for supporting the box culvert. Granular soils include A-1, A-2 and A-3 soils. Soils should be compacted to 95% of its modified Proctor value while within +/- 2% of the optimum moisture content. Some materials, such as the A-2's, may be difficult to dry out to optimum moisture content or to compact as needed. If these materials prove too difficult, they should be over-excavated at least 1-ft. and backfilled in accordance with **Section 7.2.5** of this report and **FDOT Standard Indexes**.

- **Clays and Silts**: These soils behave very differently when saturated or dry. The in-situ material encountered during excavation will be saturated due to the anticipated

shallow groundwater table, but will need to be dry in order to create suitable working conditions. Soils classified as A-4, A-5, A-6 or A-7 will likely be very difficult to dry out and may have an ability to shrink and swell depending on its moisture content. Because of this, these materials should be over-excavated at least 1-ft. and backfilled with either clean fill, a lean concrete or course stone (No. 57) wrapped in a geotextile fabric.

- **Limestone:** This material, if adjacent to suitable soils should be over-excavated a minimum of 4-in. and backfilled in accordance with **Section 7.2.3** in order to provide a level bed for supporting the box culvert, as well as to prevent differential settlement.

8. We calculated the maximum allowable bearing capacity of each section of the box culvert to be 2,000 psf. Using this as the loading, the total estimated settlement of the box culvert was determined to be less than 1-in., and the anticipated differential settlements about half this amount. These estimated settlements were corroborated by the results of the consolidation testing, which showed the total settlement to be approximately ½-inch. Any differential settlement will likely occur at the joints of the individual box culvert sections, so due care should be exercised during construction. The values for bearing capacity and settlement assume that the recommendations in this report are followed.

9. We calculated the maximum allowable bearing capacity of each of the proposed junction boxes to be 2,500 psf. Using this as the loading and, the total estimated settlement of the junction boxes was determined to be less than 1-in., and the anticipated differential settlements about half this amount. Again, these estimated settlements were confirmed by the results of the consolidation testing. The majority of any settlement is expected to occur during construction. All connections to the junction boxes should be made after box construction is completed.

10. Once the box culvert and junction boxes are in place, clean fill should be used as backfill and compacted in 12-in. loose lifts up to 18-in. beneath the bottom of the base course of the roadway in accordance with **FDOT Standard Indexes** and the recommendations within this report.

Soil Parameters are presented in the **Appendix** to aid in the design of the signalization mast arms and junction boxes. Additionally, lateral earth pressures are discussed in **Section 7.3** for the design of the culvert excavations.

7 RECOMMENDATIONS

7.1 General

The following recommendations have been developed on the basis of the previously described project characteristics and subsurface conditions encountered. If there are any changes in these project criteria, including project locations on the site, a review must be made by **MC²** to

determine if any modifications to the recommendations would be required. The findings of such a review would be presented in a supplemental report.

Once final design plans and specifications are available, a general review by **MC²** is strongly recommended, as a means to check that the evaluations made in preparation of this report are correct and that recommendations are properly interpreted and implemented.

7.2 Construction Considerations

7.2.1 Dewatering Considerations

Surface water and groundwater control will likely be needed, depending on groundwater depths at the time of construction, to establish a stable excavation base. Dewatering equipment consisting of sump pumps and/or well points have been used successfully in the past. Dewatering must be conducted with care to avoid settlement of nearby structures, roads or utilities.

Depending upon the groundwater levels and the effectiveness of dewatering at the time of construction, seepage may enter the excavated areas from the bottom as well as the sides of the excavations. Such seepage will act to loosen soils and create difficult working conditions, and therefore groundwater levels should be determined immediately prior to construction. Groundwater levels should be kept at least 12-in. below the working area to facilitate proper material placing and compaction. In some instances, it may be necessary to lower the ground water even further, if adequate compaction and stability of the base of the excavation cannot be achieved with the groundwater lowered to only 12-in. below the base.

7.2.2 Temporary Slopes

Side slopes for temporary excavations may stand near one (1) horizontal to one (1) vertical (1H:1V) for short dry periods of time and a maximum excavation depth of four (4) feet, so long as the groundwater table is at least 1-ft. below the bottom of the excavation. Where restrictions do not permit slopes to be constructed as recommended above, the excavation should be shored in accordance with current OSHA requirements. In addition, any open cut excavations adjacent to existing structures should be evaluated by a geotechnical engineer on a case by case basis. During construction, excavated materials should not be stockpiled at the top of the slope within a horizontal distance equal to the excavation depth.

Excavation slopes should conform to OSHA, State of Florida and any other local regulations. The dewatering system chosen for use on this project should consider the nature of the permeable upper sands encountered at the project site. The contractor should also assess equipment loads and vibrations when considering slopes or excavations.

7.2.3 Excavations

We understand the trunk line will be predominantly installed using open-cut trench excavations along the project alignment. All open excavations, if applicable, should be observed by the geotechnical engineer or his representative to explore the extent of any fill and excessively loose, soft, or otherwise undesirable materials. Lateral Earth Pressures are presented in **Section 7.3** for use in design of the culvert trenches. In addition to this, **Soil Parameters** are presented in the **Appendix** of this report for use in the design of the signalization mast arms and junction boxes.

During excavation, any dense, hard or lumpy material, as well as any rock or boulders encountered below the bedding zone should be removed. The contractor should have specialized equipment, such as a ripper tooth, on site in the event that LIMESTONE is needed to be excavated. It is extremely unlikely that a need to blast the rock to advance any excavations will be needed. If any voids are encountered within LIMESTONE excavations, they should be filled in with either a fine gravel, compacted fill or lean concrete in order to provide a level platform to work upon.

If the exposed soils in the excavation appear suitable as load bearing materials, they should be prepared for construction by compaction as recommended in **Section 7.2.5**.

If loose soils or yielding soils are encountered in the bottom of the excavations, the unsuitable materials should be removed and the proposed bearing elevation re-established by backfilling after the undesirable material has been removed. This backfilling may be done with a very lean concrete or with a well compacted, suitable fill such as clean sand, gravel, or compacted No. 57 or No. 67 stone wrapped in a filter fabric.

7.2.4 Structural Fill and General Backfill

All materials to be used for general backfill or compacted, structural fill should be evaluated and, if necessary, tested by **MC²** prior to placement to determine if they are suitable for the intended use. Based on the borings performed, the majority of the shallow on site sandy materials encountered that will be excavated in order to install the box culvert (SP, SP-SM/A-3, A-2-4) are suitable for use as structural fill, and as general subgrade fill and backfill. Suitable fill materials should consist of fine to medium Sand with less than 12% passing the No. 200 sieve (SP, SP-SM/A-3, and some A-2-4) and be free of rubble, organics, clay, debris and other unsuitable material.

The non-organic clean fine SAND and slightly silty or clayey fine SAND (A-3 and A-2-4) encountered at the project site are considered suitable for backfill soils for roadway construction. A-2-4 soils should only be used above the SHWT in accordance with **FDOT Standard Index 505**.

Table 3 contains a summary of the laboratory test results performed indicating depths and locations of soils with percent passing the No. 200 sieve, as well as the boring profiles

contained in the **Appendix**. Soils not classified as SP or SP-SM should not be considered suitable for use as structural fill. As before, the data presented applies to the specific locations and depths from which the samples were collected and tested. Again, variations in the characteristics and properties of the soils could occur in other locations where no borings were performed.

7.2.5 Compaction Criteria

The subgrade soils should be firm and stable prior to placement of any utilities, junction boxes and culvert sections. The soils that will support the junction boxes and culvert sections should be proof-rolled, if accessible, and checked for heaving prior to placing the structures on top. Unstable soils should be treated as described in this report.

The bearing surface of the culvert should be compacted to a minimum of 95% of the modified Proctor (AASHTO T180) maximum dry density while within ±2% of the material's optimum moisture content. If these compaction requirements are not achievable then the material must be over-excavated at least 1-ft. and backfilled with either clean fill, lean concrete or course stone wrapped in a geotextile.

The upper 18-in. beneath the junction boxes should be compacted to at least 98% of the modified Proctor maximum dry density while within ±2% of the material's optimum moisture content. If these compaction requirements are not achievable then the material must be over-excavated at least 1-ft. and backfilled with either clean fill, lean concrete or course stone wrapped in a geotextile.

A minimum density of 92% of the modified Proctor maximum dry density while within ±2% of the material's optimum moisture content should be required for backfill around the culvert sections and junction boxes up to 3-ft. above the top of these structures. Heavy machinery should not be placed on top of these structures until at least 3-ft. of cover is in place.

Any fill between 3-ft. from the top of the box culvert and below 18-in. of the bottom of the base course should be compacted to a minimum density of 95% of the modified Proctor maximum dry density while within ±2% of the material's optimum moisture content.

Material within 18-in. of the bottom of the base material, or higher, should be compacted to 98% of the modified Proctor maximum dry density. Placement of stabilized subgrade, base course and asphalt should be in accordance with applicable FDOT Standard Indexes.

Soils suspected of containing organic materials should be tested and contain less than 5% organics before they can be considered for use as backfill or structural fill. Some contractors like to place a gravel working bed in wet areas. Fine gravel, such as No. 57 and No. 67 stone may be used, as long as the gravel is wrapped in a filter fabric (Mirafi N 140 or equivalent) to reduce the risk of fines filtering into the open voids in the gravel. The

gravel, where used, should be compacted and the compaction confirmed by visual observation.

7.2.6 Directional Drilling

If horizontal directional drilling (HDD) is utilized during construction, the materials that might be penetrated during HDD, dependent upon the location and depth, might be very loose/soft soils or weathered/competent LIMESTONE. Care will be required during the HDD to limit the hydraulic head associated with the drilling fluid to reduce the risk of fracout and heave.

7.2.7 Signalization Foundations

The approximate locations of the SPT borings are shown on the **Boring Location Maps** as well as on the **Report of Core Borings** in the **Appendix.** Due to past developmental activities (such as roadway construction, underground utilities excavations, etc.), the previously disturbed soils may not have been properly backfilled and compacted; and, as a result, the degree of compaction and composition of the soils may vary considerably within a small area. These conditions should be field-verified at the time of construction.

The soils encountered at the location of the borings are suitable for the installation of the proposed structures, provided the recommendations included in this report are followed. Based on our understanding, the signalization mast arms will be designed in accordance with FDOT Standard Indexes.

Based on the SPT N-values and soil types at various depths, we have estimated the strength and unit weight parameters for design of the pole structures. These parameters were obtained from the SPT borings performed at or near the specified locations. We used empirical correlations between the N_{ES}-Value and the types of soils to arrive at the internal friction angle, cohesion, dry and wet densities, etc. The results are contained in ***Table 10***, which is presented in the **Appendix**. The soil parameters shown are for the different soil strata encountered at the boring locations using the USCS soil classification system.

Once the final loads are known, the foundation system may be designed using the soil parameters provided in this report. The foundation designs should also consider torsional loads created by wind action.

7.3 Lateral Earth Pressures

Temporary shoring may be required for portions of the open-cut trench excavations and will be subjected to lateral earth pressures. Several earth pressure theories could be utilized, however, one of the most straightforward is the equivalent fluid pressure or Rankine Theory.

Walls, which are restrained at the top and bottom, will be subjected to at-rest soil pressures equivalent to a fluid density of 55 pounds per cubic foot (pcf). Walls, which are not restrained at

the top and where sufficient movement may mobilize active earth pressures, an equivalent fluid density of 36 pcf, can be used. At locations where the base of the walls extends below the groundwater table, soil pressures can be calculated using half (½) the equivalent fluid densities. However, hydrostatic and seepage forces must then be included. These equivalent fluid pressures do not include any surcharge effects for sloped backfill, point or area loads behind the walls and assume that adequate drainage provisions have been incorporated. Passive resistance could be neglected for a safer design (due to possible excavation or erosion in front of the wall at a future time). ***Table 8*** below provides a summary of the lateral earth pressure parameters for the three conditions described herein.

Table 8: Lateral Earth Pressure

Earth Pressure Condition	Coefficient of Earth Pressure (K)	Unsubmerged Fluid Density (1) (pcf)	Submerged Fluid Density (2) (pcf)
At-Rest (K_o)	0.50	55	24
Active (K_a)	0.33	36	16
Passive (K_p)	3.00	330	143

(1) These fluid densities are based on a clean sand backfill with an average internal friction angle of 30 degrees and a moist unit weight of 110 pcf.
(2) Hydrostatic and seepage forces should be added to the submerged fluid densities when calculating total forces acting on retaining walls.

8 REPORT LIMITATIONS

The evaluations and observations detailed herein are based on the available limited soil information obtained by **MC²** and information provided by **Woodruff** and **Tetra Tech** for the proposed project. If there are any revisions to the plans for this project or if deviations from the subsurface conditions noted in this report are encountered during construction, **MC²** should be notified immediately to determine if changes or additional testing are required for this project. In the event that **MC²** is not retained to perform these functions, **MC²** cannot be responsible for the impact of those conditions on the performance of the project.

The geotechnical engineer warrants that the findings or professional advice contained herein have been made in accordance with generally accepted professional geotechnical engineering practices in the local area. No other warranties are implied or expressed.

After the plans and specifications are more complete, the geotechnical engineer should be provided the opportunity to review the final design plans and specifications to assess that our findings have been properly incorporated into the design documents. At that time, it may be necessary to submit recommendations for supplementary information. This report has been prepared for the exclusive use of **Woodruff**, **Tetra Tech, and their client**.

MC2 REPORT W ELEV. T17.066 CYPRESS ST OUTFALL.GPJ MC2.GDT 8/2/18

TEST PROCEDURES

The general field procedures employed by MC Squared, Inc. (**MC²**) are summarized in the American Society for Testing and Materials (ASTM) Standard D420 which is entitled "Investigating and Sampling Soil and Rock". This recommended practice lists recognized methods for determining soil and rock distribution and groundwater conditions. These methods include geophysical and in-situ methods as well as boring.

Standard Drilling Techniques

To obtain subsurface samples, boring are drilled using one of several alternate techniques depending upon the subsurface conditions. Some of these techniques are:

In Soils:

a) Continuous hollow stem augers.
b) Rotary boring using roller cone bits or drag bits, and water or drilling mud to flush the hole.
c) "Hand" augers.

In Rock:

a) Core drilling with diamond-faced, double or triple tube core barrels.
b) Core boring with roller cone bits.

Hollow Stem Augering: A hollow stem auger consists of a hollow steel tube with a continuous exterior spiral flange termed a flight. The auger is turned into the ground, returning the cuttings along the flights. The hollow center permits a variety of sampling and testing tools to be used without removing the auger.

Mud Rotary: In situations where unconsolidated materials are anticipated, the direct-rotary or “mud” rotary method may be used as a more effective method for obtaining soil samples. The fluid used, which is typically stored in an aluminum tub (also known as a “mudtub”), is a mix of water and bentonite, also known as a bentonite slurry or “mud”. This fluid circulates into the borehole and then returns to the mudtub using a pump system. A loss of circulation, partially or otherwise, may signify a void at that sample depth. The key advantage of using this drilling method is that it stabilizes the borehole wall while drilling in unconsolidated formations, due to the buildup of a filter cake on the wall.

Core Drilling: Soil drilling methods are not normally capable of penetrating through hard cemented soil, weathered rock, coarse gravel or boulders, thin rock seams, or the upper surface of sound, continuous rock. Material which cannot be penetrated by auger or rotary soil-drilling methods at a reasonable rate is designated as “refusal material”. Core drilling procedures are required to penetrate and sample refusal materials.

Prior to coring, casing may be set in the drilled hole through the overburden soils, to keep the hole from caving and to prevent excessive water loss. The refusal materials are then cored according to ASTM D-2113 using a diamond-studded bit fastened to the end of a hollow, double or triple tube core barrel. This device is rotated at high speeds, and the cuttings are brought to the surface by circulating water. Core samples of the material penetrated are protected and retained in the swivel-mounted inner tube. Upon completion of each drill run, the core barrel is brought to the surface, the core recovery is measured, and the core is placed, in sequence, in boxes for storage and transported to our laboratory.

Sampling and Testing in Boreholes
Several techniques are used to obtain samples and data in soils in the field; however the most common methods in this area are:

a) Standard Penetrating Testing
b) Undisturbed Sampling
c) Dynamic Cone Penetrometer Testing
d) Water Level Readings

The procedures utilized for this project are presented below.

Standard Penetration Testing: At regular intervals, the drilling tools are removed and soil samples obtained with a standard 2-inch diameter split tube sampler connected to an A or N-size rod. The sampler is first seated 6 inches to penetrate any loose cuttings, and then driven an additional 12 inches with blows of a 140-pound safety hammer falling 30 inches. Generally, the number of hammer blows required to drive the sampler the final 12 inches is designated the "penetration resistance" or "N" value, in blows per foot (bpf). The split barrel sampler is designed to retain the soil penetrated, so that it may be returned to the surface for observation. Representative portions of the soil samples obtained from each split barrel sample are placed in jars, sealed and transported to our laboratory.

The standard penetration test, when properly evaluated, provides an indication of the soil strength and compressibility. The tests are conducted according to ASTM Standard D1586. The depths and N-values of standard penetration tests are shown on the Boring Logs. Split barrel samples are suitable for visual observation and classification tests but are not sufficiently intact for quantitative laboratory testing.

Water Level Readings: Water level readings are normally taken in the boring and are recorded on the Boring Records. In sandy soils, these readings indicate the approximate location of the hydrostatic water level at the time of our field exploration. In clayey soils, the rate of water seepage into the boring is low and it is generally not possible to establish the location of the hydrostatic water level through short-term water level readings. Also, fluctuation in the water level should be expected with variations in precipitation, surface run-off, evaporation, and other factors. For long-term monitoring of water levels, it is necessary to install piezometers.

The water levels reported on the Boring Logs are determined by field crews immediately after the drilling tools are removed, and several hours after the boring are completed, if possible. The time lag is intended to permit stabilization of the groundwater level that may have been disrupted by the drilling operation.

Occasionally the boring will cave-in, preventing water level readings from being obtained or trapping drilling water above the cave-in zone.

BORING LOGS

The subsurface conditions encountered during drilling are reported on a field boring log prepared by the Driller. The log contains information concerning the boring method, samples attempted and recovered, indications of the presence of coarse gravel, cobbles, etc., and observations of groundwater. It also contains the driller's interpretation of the soil conditions between samples. Therefore, these boring records contain both factual and interpretive information. The field boring records are kept on file in our office.

After the drilling is completed a geotechnical professional classifies the soil samples and prepares the final Boring Logs, which are the basis for our evaluations and recommendations.

SOIL CLASSIFICATION

Soil classifications provide a general guide to the engineering properties of various soil types and enable the engineer to apply his past experience to current problems. In our investigations, samples obtained during drilling operations are examined in our laboratory and visually classified by an engineer. The soils are classified according to consistency (based on number of blows from standard penetration tests), color and texture. These classification descriptions are included on our Boring Logs.

The classification system discussed above is primarily qualitative and for detailed soil classification two laboratory tests are necessary; grain size tests and plasticity tests. Using these test results the soil can be classified according to the AASHTO or Unified Classification Systems (ASTM D-2487). Each of these classification systems and the in-place physical soil properties provides an index for estimating the soil's behavior. The soil classification and physical properties are presented in this report.

The following table presents criteria that are typically utilized in the classification and description of soil and rock samples for preparation of the Boring Logs.

Relative Density of Cohesionless Soils From Standard Penetration Test		**Consistency of Cohesive Soils**	
Very Loose	≤ 4 bpf	Very Soft	≤ 2 bpf
Loose	5 - 10 bpf	Soft	3 - 4 bpf
Medium Dense	11 - 30 bpf	Firm	5 - 8 bpf
Dense	31 - 50 bpf	Stiff	9 - 15 bpf
Very Dense	> 50 bpf	Very Stiff	16 - 30 bpf
		Hard	30 – 50 bpf
(bpf = blows per foot, ASTM D 1586)		Very Hard	> 50 bpf

Relative Hardness of Rock		**Particle Size Identification**	
Very Soft	Very soft rock disintegrates or easily compresses to touch; can be hard to very hard soil.	Boulders	Larger than 12"
Soft	May be broken with fingers.	Cobbles	3" - 12"
Moderately Soft	May be scratched with a nail, corners and edges may be broken with fingers.	Gravel	
		Coarse	3/4" - 3"
		Fine	4.76mm - 3/4"
Moderately Hard	Light blow of hammer required to break samples.	Sand	
		Coarse	2.0 - 4.76 mm
		Medium	0.42 - 2.00 mm
		Fine	0.42 - 0.074 mm
Hard	Hard blow of hammer required to break sample.	Fines (Silt or Clay)	Smaller than 0.074 mm

Rock Continuity		**Relative Quality of Rocks**	
RECOVERY = $\frac{\text{Total Length of Core}}{\text{Length of Core Run}}$ x 100 %		**RQD** = $\frac{\text{Total core, counting only pieces > 4" long}}{\text{Length of Core Run}}$ x 100 %	
Description	Core Recovery %	Description	RQD %
Incompetent	Less than 40	Very Poor	0 - 25 %
Competent	40 - 70	Poor	25 - 50 %
Fairly Continuous	71 - 90	Fair	50 - 75 %
Continuous	91 - 100	Good	75 - 90 %
		Excellent	90 - 100 %

GENERAL CONSTRUCTION NOTES

Manhole and inlet walls shall be built laid in Portland cement mortar and shall be plastered on the outside with 1:2 cm cement mortar to a minimum thickness before backfilling shall be as follows: for depth of invert less than 8' plaster to a minimum finish ceiling 8" for depth of invert more than 8' plaster to finish ceiling 12". Brick to be radially laid with walls shall be in stretcher courses, with every sixth course a header course. Height of each course shall not exceed 3". Concrete for bottom shall be poured to conform curves of pipe sizes and shall be of proportions of 1:2:4 by loose measurement.

To The Tampa - Hillsborough County Expressway Authority

P.O. BOX 23646
TAMPA, FLORIDA 33622
813/879-1711

In accordance with the City-Expressway Authority Joint Project Agreement, the following "as-built" drawings (sepias) for the Tampa-South Crosstown Expressway have been furnished the City of Tampa, (Attention: Mr. Dale Twachtman, Utilities Coordinator).

CONTRACT NUMBER 1 - State Job No. 10002-3501

Description	Drawing Number Sheet No.
Cover Sheet (Gandy Blvd. to Euclid Ave.)	1
Drainage Map	3
Miscellaneous Details	9
Typical Sections	10, 11 and 12
Plan and Profile	15 through 28
Interchange Layout (Gandy Blvd-Dale Mabry)	29
Cover Sheet Water Line Relocation	WL-1
Summary of Water Line Quantities	WL-2
Standard Details	WL-3 and 4
Plan and Profile	WL-5,6,7,7A,8 and 8A
Cover Sheet Sanitary Sewer Relocation	SS-1
Summary of Quantities	SS-2
Plan and Profile	SS-3
Miscellaneous Details	SS-4 and SS-5
Key Map	RW/1
Right-of-way Maps	RW/2 through RW/7

Total No. Mylar Sheets 28.

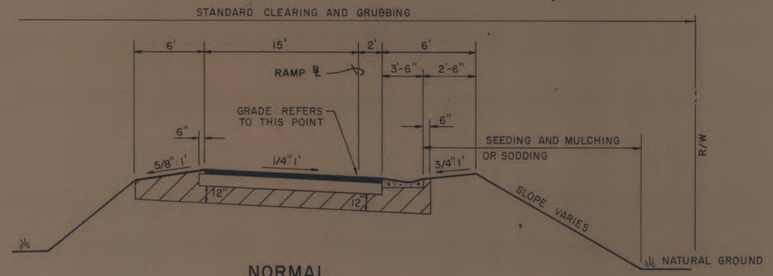
4 LANE MAINLINE

DESIGN SPEED 50 M.P.H.

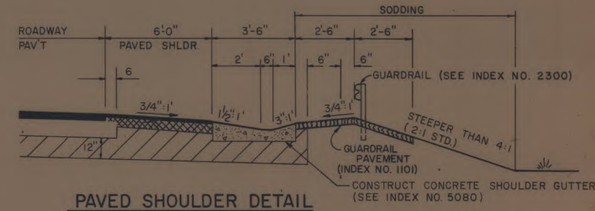
LEGEND

- 1" ASPHALTIC CONCRETE WEARING COURSE (SHOULDERS) SEE NOTE 1.
- 3" ASPHALTIC CONCRETE PAVEMENT: TYPE S-1 ASPHALTIC CONCRETE BASE COURSE (2" THICK, SINGLE COURSE) WITH ASPHALTIC CONCRETE WEARING COURSE (1" THICK) TOP LAYER.
- 10" LIMEROCK BASE (DOUBLE COURSE) PRIMED FOR MAINLINE AND RAMPS
- 12" STABILIZED ROADBED (MINIMUM L.B.R. 40)
- 5" PAVED SHOULDER BASE MATERIAL (LIMEROCK OR SAND-ASPHALT HOT MIX).

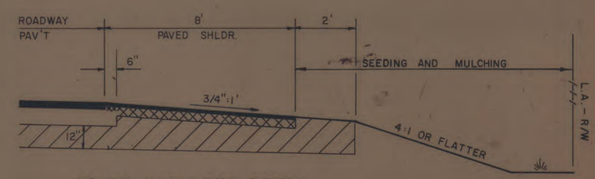


NORMAL

NOTE: FILL SLOPES VARY TO MEET RIGHT OF WAY AND OTHER REQUIREMENTS SEE ROADWAY CROSS SECTIONS.
ALL SLOPES STEEPER THAN 4:1 TO BE SODDED.
ALL SLOPES FLATTER THAN 4:1 TO BE SEEDED AND MULCHED.



PAVED SHOULDER DETAIL
WITH GUTTER AND GUARDRAIL



PAVED SHOULDER DETAIL

GENERAL NOTES

1. For Limits Of Shoulder Pavement See Detail Plans.
   Shoulder Pavement Alternates
   F. Limerock Base (5" Thick) Primed With Type S-I Asphaltic Concrete Base Course (1" Thick), and A.C. Wearing Course (1" Thick)
   G. Sand-Asphalt Hot Mix Base (5" Thick) 800 lb Stability, with A.C. Wearing Course (1" Thick)
2. When Width Of Shoulder To Be Constructed Adjacent To Curb And Gutter Or Shoulder Gutter Is Less Than 6', The Shoulder Pavement Shall Be Identical To The Adjacent Roadway Pavement.
3. Sodding Will Be Placed As Shown On Sodding Tabulation And In Detail Plan.
4. Limits Of Selective Clearing And Grubbing As Directed By The Engineer. Special Care Will Be Taken To Preserve Trees Not In The Actual Path Of Construction.
5. For Additional Detail See Index Nos. 1101, 2300, 5010, 5072, and 5080.
6. For Fill Slopes See Roadway Cross-Sections.

NOTES

1. Concrete for Box to be Class II.
2. All reinforcing to have a minimum of 2" concrete cover unless otherwise noted.
3. Copper waterstop shall be continuous 24 oz. copper strip, 6" wide.
4. All items necessary for the completion of each box, including grates and reinforcing embedded in retaining wall, etc., shall be included in the Contract Unit Price bid for each inlet.
5. Pipe Cradle to be Class I. Concrete accurately shaped so as to fit contour of pipe surface, extending as shown from top of pipe intersection with face of wall to top of footing.
6. All exposed edges to be tooled to ¼" radius.

TOTAL SQUARE YARDS					11,875	32,623

NOTE, EXTRA SODDING DUE MOSTLY TO MEDIAN & AREA AROUND R.R. TO ELIMINATE EROSION & FOR BETTER AESTHETICS.

SUMMARY OF EARTHWORK

* ROADWAY EXC. A-2, A-3 MATERIAL	4,318 C.Y.
SUBSOIL EXC. A-2, A-3 MATERIAL	7,070 C.Y.
Ø SUBSOIL EXC. A-8 MATERIAL	4,030 C.Y.
TOTAL SUBSOIL EXC.	11,100 C.Y.
EMBANKMENT	200,089 C.Y.

*THERE IS NO DIRECT PAY FOR ROADWAY EXCAVATION. ANY SUITABLE MATERIAL MAY BE USED IN THE EMBANKMENT AT THE OPTION OF THE CONTRACTOR.

Ø A-8 MATERIAL TO BE DISPOSED OF BY THE CONTRACTOR IN AREAS PROVIDED BY HIM UNLESS OTHERWISE DIRECTED BY THE ENGINEER.

GENERAL NOTES:

ITEM NO. 120-6 ANY BORROW EXCAVATION REQUIRED SHALL BE FURNISHED BY THE CONTRACTOR FROM AREAS PROVIDED BY HIM AND/OR BORROW AREA ONE AS SHOWN ON SHEET NUMBER 60 AND THE COST OF FURNISHING SUCH MATERIAL IS TO BE INCLUDED IN THE PRICE FOR EMBANKMENT.

ITEM NO'S 104-1 THROUGH 104-6 ARE ESTIMATED QUANTITIES FOR PREVENTION, CONTROL, AND ABATEMENT OF SOIL EROSION AND WATER POLLUTION. TO BE USED AT LOCATIONS DESIGNATED BY THE ENGINEER.

ITEM NO. 524-1-1 INCLUDES 7 S.Y. FOR CONTINGENCIES TO BE USED, IF NECESSARY, AS DIRECTED BY THE ENGINEER.

NOTES:

1. FOR BRIDGE ITEMS & QUANTITIES, SEE BRIDGE PLANS.
2. FOR RETAINING WALL ITEMS & QUANTITIES, SEE BRIDGE PLANS.
3. FOR HIGHWAY SIGN ITEMS & QUANTITIES, SEE ROADWAY SIGNING PLANS.
4. FOR LIGHTING ITEMS & QUANTITIES, SEE LIGHTING PLANS.
5. GUARDRAIL STATIONS ARE APPROXIMATELY ONLY AND ARE TO BE ADJUSTED IN THE FIELD BY THE ENGINEER, IF NECESSARY.
6. FOR SANITARY SEWER RELOCATION ITEMS & QUANTITIES SEE SANITARY SEWER RELOCATION PLANS.

ITEM NO. 570-2 INCLUDES 12,165 SQ.YD'S FOR TEMPORARY GRASSING.
ITEM NO. 570-3 INCLUDES 250 LB'S FOR TEMPORARY GRASSING.

ITEM NO. 570-5 INCLUDES 1.1 TONS FOR TEMPORARY GRASSING.
ITEM NO. 570-9 INCLUDES 28.24 M. GAL'S FOR TEMPORARY GRASSING.
ITEM NO. 570-10 INCLUDES 38 LB'S FOR TEMPORARY GRASSING.
ITEM NO. 575-1 INCLUDES 1,500 S.Y FOR CONTINGENCIES TO BE USED, IF NECESSARY, AS DIRECTED BY THE ENGINEER.

SUMMARY OF EARTHWORK

* ROADWAY EXCAVATION = 8,691 CU. YD.
EMBANKMENT = 155,263 CU. YD. ①

* There is no direct payment for Roadway Excavation. Any suitable material may be used in the embankment at the option of the Contractor.

GENERAL NOTES:

ITEM NO's. 104-1 THROUGH 104-6 ARE ESTIMATED QUANTITIES FOR PREVENTION, CONTROL, AND ABATEMENT OF SOIL EROSION AND WATER POLLUTION. TO BE USED AT LOCATIONS DESIGNATED BY THE ENGINEER.

NOTE:

1. FOR BRIDGE ITEMS & QUANTITIES, SEE BRIDGE PLANS.
2. FOR RETAINING WALL ITEMS & QUANTITIES, SEE BRIDGE PLANS.
3. FOR HIGHWAY SIGN ITEMS & QUANTITIES, SEE ROADWAY SIGNING PLANS.
4. FOR SIGNALIZATION ITEMS & QUANTITIES, SEE SIGNALIZATION PLANS.
5. FOR LIGHTING ITEMS & QUANTITIES, SEE LIGHTING PLANS.
6. GUARDRAIL STATIONS ARE APPROXIMATE AND ARE TO BE ADJUSTED IN THE FIELD BY THE ENGINEER, IF NECESSARY.
7. FOR SANITARY SEWER ITEMS & QUANTITIES, SEE SANITARY SEWER RELOCATION PLANS.

ITEM NO. 570-2 INCLUDES 17,650 SQ. YD's. FOR TEMPORARY GRASSING.
ITEM NO. 570-3 INCLUDES 261 LBS. FOR TEMPORARY GRASSING.
ITEM NO. 570-4 INCLUDES 10.5 TONS FOR TEMPORARY GRASSING.
ITEM NO. 570-5 INCLUDES 1.5 TONS FOR TEMPORARY GRASSING.
ITEM NO. 570-9 INCLUDES 137 M GAL. FOR TEMPORARY GRASSING.
ITEM NO. 570-10 INCLUDES 39 LBS. FOR TEMPORARY GRASSING.
ITEM NO. 120-6 ANY BORROW EXCAVATION REQUIRED SHALL BE FURNISHED BY THE CONTRACTOR FROM AREAS PROVIDED BY HIM AND/OR BORROW AREA ONE AS SHOWN ON SHEET NUMBER 66 AND THE COST OF FURNISHING SUCH MATERIAL IS TO BE INCLUDED IN THE PRICE FOR EMBANKMENT.
ITEM NO. 339-70 FOR PAVEMENT UNDER GUARDRAIL.
ITEM NO. 440-1-2 And 524-1-1 included for contingency, to be used, if necessary, as directed by the Engineer.
ITEM NO. 575-1 Includes 1,000 Sq. Yds. for contingency, to be used, if necessary, as directed by the Engineer.

The cost of informational signs is to be included in the overall bid. See sheet no. 65.

SECTION	CONTRACT	SOUTH CROSSTOWN EXPRESSWAY	SHEET NO
10002	3503		T-4
By WACO		TAMPA-HILLSBOROUGH COUNTY EXPRESSWAY AUTHORITY	Date 11-73

GENERAL NOTES

GENERAL

G-1 NO CHANGES SHALL BE MADE IN THE SIGNALIZATION PLANS WITHOUT THE APPROVAL OF THE RESIDENT ENGINEER.

G-2 THE CONTRACTOR SHALL BE RESPONSIBLE FOR SUBMITTING TO THE PROJECT ENGINEER TWO (2) COPIES OF SUBMITTAL DATA FOR EACH ITEM OF PROPOSED EQUIPMENT TO BE USED AND SHALL HAVE APPROVAL OF SUBMITTAL DATA PRIOR TO THE INSTALLATION.

G-3 ALL EQUIPMENT MUST MEET AND BE INSTALLED IN ACCORDANCE WITH THE D.O.T. PUBLICATION "STANDARD SPECIFICATIONS FOR TRAFFIC SIGNALS AND AUXILIARY EQUIPMENT" REVISED.

G-4 THE CONTRACTOR SHALL REQUIRE THE CONTROLLER MANUFACTURER OR SUPPLIER TO FORWARD THE MAKE, MODEL AND SERIAL NUMBERS OF EACH CONTROLLER, REFERENCED BY JOB NUMBER AND LOCATION NUMBER AS SHOWN ON THE SIGNAL PLANS TO THE RESIDENT ENGINEER.

G-5 THE CONTRACTOR SHALL BE RESPONSIBLE FOR SPECIFYING THE SIZE AND NUMBER OF CONDUCTOR RUNS (PLUS 4 SPARES) AND CONDUIT REQUIRED TO COMPLETELY AND SATISFACTORILY WIRE THE SIGNAL SYSTEM AS OUTLINED AND SHOWN ON THE PLANS. IN ALL INSTANCES, THE "STANDARD SPECIFICATIONS FOR TRAFFIC CONTROL SIGNALS AND AUXILIARY EQUIPMENT" TOGETHER WITH THE LATEST METHODS OF THE NATIONAL ELECTRICAL CODE SHALL BE STRICTLY ADHERED TO. ANY DEVIATIONS OR EXCEPTIONS TO THE ABOVE MUST BE SUBMITTED IN WRITING TO THE RESIDENT ENGINEER FOR HIS REVIEW AND SUBSEQUENT DECISION.

G-6 THE CONTRACTOR SHALL BE RESPONSIBLE FOR INSTALLING THE SERVICE GROUND TO HAVE A RESISTANCE TO GROUND NOT TO EXCEED 25 OHMS AS MEASURED WITH A GROUND "MEGGER".

G-7 THE CONTRACTOR SHALL BE RESPONSIBLE FOR SUBMITTING TO THE RESIDENT ENGINEER TWO (2) COPIES OF A SCHEMATIC SHOWING THE CONDUCTOR RUNS, THE POINTS OF CHANGES AND THE NUMBER OF CONDUCTORS REQUIRED AT EACH POINT.

CONTROLLER

C-1 THE OUTSIDE DOOR AND AUXILIARY DOOR OF ALL CONTROLLER CABINETS TO BE EQUIPPED WITH DIFFERENT CYLINDER LOCKS, TWO KEYS TO EACH LOCK.

C-2 IN ALL CABINETS CONTAINING ACTUATED CONTROLLERS, THERE MUST BE INSTALLED ONE (1) ADDITIONAL, SIX (6) TERMINALS STRIP FOR THE ACCOMMODATION OF LOOP TYPE DETECTOR LEADS.

C-3 THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING THE PROPER SIZE FOUNDATION, ACCORDING TO MANUFACTURER'S SPECIFICATIONS, FOR BASE MOUNTED CONTROLLER CABINETS.

C-4 THE CONTROLLER CABINETS SHALL BE OF THE FOLLOWING LISTED MINIMUM OUTSIDE DIMENSIONS: POLE MOUNTED; HEIGHT, 31½ INCHES; WIDTH, 19⅜ INCHES; DEPTH, 13½ INCHES. BASE MOUNTED; HEIGHT, 47 INCHES; WIDTH, 28 INCHES; DEPTH, 15 INCHES. THE EQUIPMENT, PROPOSED AND FUTURE, SHALL NOT OCCUPY MORE THAN 70% OF THE CABINET CAPACITY.

C-5 THE CONTROLLER BID SHALL HAVE BUILT-IN NON-LOCKING DETECTION CAPABILITIES OR SHALL HAVE INCLUDED IN THE BID A TIME DELAY RELAY TO EFFECT A TIME DELAY FOR OPENING AND CLOSING A CIRCUIT WITHIN A SPECIFIED TIME LIMIT. THE TIME DELAY SHALL BE ADJUSTABLE FROM 2 TO 60 SECONDS. THE RELAY SHALL BE INSERTED ONLY INTO THE CIRCUIT BETWEEN THE CONTROLLER AND THE DETECTOR SPECIFIED.

C-6 ALL SOLID STATE CONTROLLERS ARE REQUIRED TO HAVE AN ADEQUATE NUMBER OF EXTERNAL JACK MOUNTED, HEAVY DUTY TYPE, SIGNAL LIGHT LOAD SWITCHES WITH SUB-BASE TO CARRY THE AMPERAGE FOR THE MAXIMUM NUMBER OF 150 WATT BULBS THAT SHALL BE DISPLAYED AT ANY ONE INTERVAL.

C-7 ALL CONTROLLLERS THAT DO NOT HAVE A BUILT-IN FEATURE TO ELIMINATE CONFLICTING SIGNAL INDICATIONS SHALL HAVE A SOLID STATE DEVICE (WITH A VARIABLE TIME DELAY FEATURE WHICH PREVENTS ERRONEOUS REACTIONS) TO MONITOR THE SIGNAL INDICATIONS AT THE POINT WHERE THE LOAD SWITCHES FEED THE SIGNAL CABLE SO THERE WILL BE NO CONFLICTING SIGNAL INDICATIONS DISPLAYED. IF THIS CONDITION EXISTS, THE UNIT WILL TRANSFER THE SIGNAL TO AN ALL RED INDICATION, PROCEEDED BY A FLASHING OPERATION DISPLAYING A YELLOW FLASHING SIGNAL TO THE ARTERY AND RED FLASHING SIGNAL TO THE SIDE STREET OR STREETS. THE FLASHING CONDITION WILL REMAIN UNTIL THE SYSTEM IS RESET MANUALLY.

C-8 CONTROLLERS SPECIFIED TO OPERATE AS MULTI-PHASE WILL BE COMPLETELY SOLID STATE WITH NO ELECTRO-MECHANICAL RELAYS, OR OTHER MOVING PARTS. SOLID STATE PHASE TIMING MODULES SHALL BE INTERCHANGEABLE BETWEEN DIFFERENT CONTROLLERS OF THE SAME MANUFACTURER EACH MODULE PROVIDES ALL FUNCTIONS FOR A SINGLE TRAFFIC MOVEMENT OF PHASE. EACH CONTROLLER SHALL BE FURNISHED WITH THE APPROPRIATE INTERVAL SEQUENCE UNIT, PHASE SEQUENCE UNIT, CONNECTING CABLE, SWITCHING RELAYS, SOLID STATE FLASHER, SPECIAL SEQUENCE RELAYS AS REQUIRED, VEHICLE DETECTOR RELAYS AND MISCELLANEOUS HARDWARE AND EQUIPMENT. ALL TIMING INTERVALS SHALL BE SELECTABLE OVER THE ENTIRE TIMING RANGE, WITHOUT THE USE OF MULTIPLICATION SWITCHES.

C-9 WHEN SPECIFIED, MULTI-PURPOSE CONTROLLERS PROVIDING FOR ADDITIONAL PHASE CAPACITY BY THE ADDITION OF MODULAR UNITS SHALL DO SO WITHOUT THERE BEING ANY ADDITIONAL WIRING OR CHANGE IN WIRING TO THE CONTROLLER AND/OR FRAME. ALL MOUNTING FRAMES SHALL BE CAPABLE OF ACCEPTING ADDITIONAL FUNCTIONAL OR PHASE MODULES REGARDLESS OF THEIR FUNCTIONAL CHARACTERISTICS. ALL CABINET WIRING REQUIRED FOR FUTURE OPERATION AS SHOWN ON THE OPERATION PLAN SHALL BE INCLUDED SO THAT ALL ACCESSORY UNITS MAY BE ADDED BY JACK MOUNTING OR PLUGGING UNITS. SUFFICIENT NUMBER OF CONDUCTORS SHALL BE FURNISHED TO WIRE FUTURE SIGNAL HEADS AS SHOWN ON THE PLANS, FROM THE CONTROLLER TO THE FIRST DISCONNECT HANGER.

C-10 THE CONTRACTOR MAY BE REQUIRED TO PROVIDE, INSTALL, AND OPERATE ALL PHASE MODULES (PROPOSED AND FUTURE) AS OUTLINED BY THE SIGNAL OPERATION PLAN. AT THE END OF THE OPERATION CHECK BY THE ENGINEER, THE CONTRACTOR SHALL REMOVE ALL FUTURE PHASE MODULES AND INSTALL COVER PLATES.

DETECTOR

D-1 THE CONTRACTORS SHALL BE RESPONSIBLE FOR INSTALLING THE CORRECT PHASE DETECTOR UNITS REQUIRED FOR SEMI-ACTIVATED CONTROLLERS: WHERE MULTIPLE-PHASE DETECTION IS REQUIRED, AS WITH FULL-ACTUATED MULTI-PHASE CONTROLLERS, THE DETECTORS SHALL BE CAPABLE OF DETECTING EACH AND EVERY SEPARATE MOVEMENT AS SHOWN IN THE SIGNAL OPERATING PLAN.

D-2 THE CONTRACTOR SHALL FURNISH ONE DETECTOR UNIT WITH SUFFICIENT POWER SUPPLIES FOR EACH WIRE LOOP DETECTION TO BE IMBEDDED IN ROADWAY. METHODS FOR TUNING MUST BE EXTERNAL AND EASILY ACCESSIBLE. THERE MUST BE PROVIDED ON THE FRONT OF THE DETECTOR UNIT A VISUAL INDICATOR OR LIGHT TO SHOW WHEN ACTUATIONS ARE BEING RECEIVED. THE DETECTOR UNIT (BY MEANS OF A FRONT PANEL MOUNTED SWITCH) MUST BE CAPABLE OF MOTION DETECTION. PRESENCE DETECTION MUST DETECT VEHICLES ENTERING, STATIONARY, IN, LEAVING THE LOOP OR A COMBINATION OF THESE.

D-3 LOOP LOCATION AND SIZE ARE SHOWN ON THE PLANS FOR THE PURPOSE OF GENERAL LOCATION. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ESTABLISHING THE CORRECT SIZE LOOPS TO BE PLACED IN ROADWAY AND CORRECT SIZE A.W.G. WIRE AS REQUIRED BY MANUFACTURER'S SPECIFICATIONS IN ORDER TO ASSURE PROPER OPERATION. WHERE LOOP CONDUCTOR IS RUN OVERHEAD SHIELDED WIRE MUST BE USED.

POLES

P-1 THE CONTRACTOR SHALL BE RESPONSIBLE FOR ESTABLISHING THE AMOUNT OF RAKE TO BE USED ON POLES AT THE TIME OF INSTALLATION.

P-2 IN ACCORDANCE WITH GENERAL NOTE NO. G-3, STRAIN INSULATORS ARE HEREWITH DELETED. ALL TRAFFIC SIGNAL POLES SHALL BE GROUNDED IN ACCORDANCE WITH SECTION 715-11 AS SHOWN IN FLORIDA DEPARTMENT OF TRANSPORTATION STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION OF 1973. ALL SPAN WIRES MUST BE GROUNDED WITH NO. 6 (MIN.) COPPER WIRE.

P-3 CONCERNING PEDESTRIAN PUSH BUTTON DETECTORS, TYPE VII, PARAGRAPH "C" PAGE 84 OF THE "STANDARD SPECIFICATIONS FOR TRAFFIC CONTROL SIGNALS AND AUXILIARY EQUIPMENT" IS HEREWITH DELETED.

TRAFFIC SIGNAL ASSEMBLY

T-1 ALL TRAFFIC SIGNAL ASSEMBLIES TO BE FURNISHED WITH TWELVE INCH (12") LENSES, STANDARD VISORS, DISCONNECT HANGERS, BULBS (150 WATTS, 125 VOLTS) AND HARDWARE FOR SPAN WIRE MOUNTING UNLESS OTHERWISE SPECIFIED IN THE PLANS.

T-2 THERE SHALL BE PROVIDED BY THE MANUFACTURER OF TRAFFIC SIGNAL HEADS A METHOD OF POSITIVE LOCKING. THE METHOD USED SHALL PREVENT ANY MIS-ALIGNMENT DUE TO STRONG WINDS OR OBJECTS WHICH MAY COME IN CONTACT WITH THE SIGNAL HEAD. AT THE POINT OF ENTRANCE INTO ANY SIGNAL HEAD A SURE GASKETING METHOD SHALL BE USED TO PREVENT THE ENTRANCE OF ANY WATER.

T-3 THOSE TRAFFIC SIGNAL ASSEMBLY HEADS SHOWN AS FUTURE, SHALL NOT BE INSTALLED DURING THE CHECKOUT OF THE CONTROLLER.

REMOVAL OR ADJUSTMENT OF EXISTING EQUIPMENT

R-1 THE CONTRACTOR SHALL BE RESPONSIBLE FOR RELOCATING ANY EXISTING TRAFFIC SIGNAL EQUIPMENT OR SIGNAL POLES IF NECESSARY TO ACCOMMODATE THE CONSTRUCTION WORK AND STILL PROVIDE ADEQUATELY SAFE TRAFFIC CONTROL. ALL SUCH RELOCATIONS OR ADJUSTMENTS SHALL HAVE THE APPROVAL OF THE RESIDENT ENGINEER.

R-2 THE CONTRACTOR SHALL BE RESPONSIBLE FOR REMOVAL OF ALL EXISTING TRAFFIC SIGNAL EQUIPMENT (SIGNAL HEADS, POLES, SIGNAL HARDWARE AND CONTROLLER) ON THE PROJECT THAT IS NOT INCORPORATED IN THE NEW INSTALLATION AND DELIVER IT DURING NORMAL WORKING HOURS TO:

CITY OF TAMPA
SIGNAL & SIGN MAINTENANCE SHOP
2300 MARITIME BLVD.
TAMPA, FLORIDA 33605

NOTIFICATION TO UTILITIES AND ARRANGEMENTS FOR SAFEGUARDS

N-1 CHAPTER 8AS-4, REGULATION REQUIRING PROTECTIONS IN CLOSE PROXIMITY OF OVERHEAD HIGH-VOLTAGE POWER LINES. WHEN ANY OPERATIONS ARE TO BE PREFORMED, IN CLOSE PROXIMITY (6 FEET) OF ANY POWER LINE, THE PERSON OR PERSONS RESPONSIBLE FOR THE WORK TO BE DONE SHALL PROMPTLY NOTIFY THE UTILITY COMPANIES INVOLVED. THEY SHALL ALSO BE RESPONSIBLE FOR THE COMPLETION OF THE SAFETY MEASURES REQUIRED IN SECTION 4.04 THROUGH 4.07 BEFORE PROCEEDING WITH ANY ACTIVITY WHICH MAY NOT CONFORM TO THE REQUIRED CLEARANCES OR OTHER REQUIREMENTS.

GENERAL AUTHORITY: 440.56(2) FLORIDA STATUTES
LAW IMPLEMENTED: 440.56 FLORIDA STATUTES
HISTORY: AMENDED 4-1-71, 5-1-72

⊗ Placement of Prestressed Strands for Type VII

● Placement of Dormant Strands

FOOTING NOTES:

EXCAVATION AND BACKFILL

Excavation and Backfill for the Footings shall be in accordance with section 125-8.2 with the exception that for the Backfill, in lieu of the requirements for obtaining the specified density, The Backfill may be handtamped in four inch maximum layers or machine tamped in six inch maximum layers. The material should be neither dry nor saturated. At the Contractor's option Backfilling may be done with poured concrete.

FORMS Shall be in accordance with Article 700-8.3.

MATERIAL SPECIFICATIONS

1. Tapered tubes (S.A.E.-1020 Steel processed to minimum yield stress of 55,000 lbs P.S.I.
2. Cast anchor base and handhole frame, ASTM-A27, Grade 65-35.
3. Handhole cover plate, 11 gauge steel, S.A.E.-1015.
4. Cast aluminum pole top, aluminum alloy 43.
5. Span wire clamp, low alloy, high strength steel ASTM-A242 or 375, load producing distortion 12,500 lbs. direct tension.
6. All bolts and nuts less than 5/8" diameter passivated stainless steel AISI-300 series, commercial grade.
7. All bolts and nuts 5/8" dia. and over, ASTM-A307 and galvanized in accordance with ASTM-A153.
8. Anchor base and U-bolts, high strength steel minimum yield stress 55,000 lbs P.S.I.
9. Welding rod, ASTM-A233, class E60XX or 70XX.
10. Galvanizing, as per ASTM-A123.
11. Painting, when specified, inside of poles red lead primer. Outside of poles zinc chromate, iron oxide primer.
12. The taper shall be 0.14 of an inch per linear foot, measured as change in diameter.

AS BUILT

APR 21 1976

NOTES

1. Concrete for Box to be Class II
2. All reinforcing to have a minimum of 2" concrete cover unless otherwise noted.
3. Copper waterstop shall be continuous 24 oz. copper strip, 9" wide.
4. All items necessary for the completion of each box, including grates and reinforcing embedded in retaining walls, etc., shall be included in the Contract Unit Price bid for each inlet.
5. Pipe Cradle to be Class I Concrete accurately shaped so as to fit contour of pipe surface, extending as shown from top of pipe intersection with face of wall to top of footing.
6. All exposed edges to be tooled to ¼" radius.

GENERAL NOTES:

Item No. 102-1 to be accomplished in accordance with the State of Florida Manual on Traffic Control and Safe Pratices for Street and Highway Construction, Maintenance and Utility Operations.

Item No's. 104-1 through 104-6 are Estimated Quantities for Prevention, Control, and Abatement of Soil Erosion and Water Pollution. To be used at locations Designated By the Engineer.

NOTE:

1. For Bridge Items and Quantities, See Bridge Plans.
2. For Retaining Wall Items and Quantities, See Bridge Plans.
3. For Highway Sign Items and Quantities, See Roadway Signing Plans.
4. For Lighting Items, See Lighting Plans.
5. Guardrail Stations are approximately only and are to be adjusted in the field by the Engineer, if necessary.

Item No. 570-2 Includes 16,090 Sq.Yd's. for temporary grassing.
Item No. 570-3 Includes 332 Lb's. for temporary grassing.
Item No. 570-4 Includes 13 Tons for temporary grassing.
Item No. 570-5 Includes 2 Tons for temporary grassing.
Item No. 570-9 Includes 42 M.Gal for temporary grassing.
Item No. 570-10 Includes 50 Lb's. for temporary grassing.

6. Item No. 440-1-2 to be used as a contingency item, to be used if necessary, as directed by the engineer. ◇

TYPICAL SECTION

DESIGN SPEED 50 M.P.H.

TYPICAL SECTION THRU TOLL PLAZA

TYPICAL SECTION THRU TOLL PLAZA
STA. 526+73.18 TO STA. 528+73.18

GENERAL NOTES

1. SOD ALL SLOPES STEEPER THAN 4:1 FROM EDGE OF PAVED SHOULDER TO TOE OF SLOPE, EXCLUDING SHOULDER GUTTER AND GUARDRAIL PAVEMENT.
2. SOD 2' ADJACENT TO PAVED SHOULDER IN SUPERELEVATION SECTIONS WHEN ROADWAY WATER DRAINS TO MEDIAN DITCH.
3. WHERE SHOULDER PAVEMENT ADJACENT TO SHOULDER GUTTER IS LESS THAN 6' WIDE, IT SHALL BE IDENTICAL TO THE ADJACENT ROADWAY PAVEMENT.
4. THE ASPHALTIC CONCRETE WEARING COURSE IS RESTRICTED TO ALTERNATES 1, 2 OR 3

NOTE - PAVEMENT NOT INCLUDED IN THIS CONTRACT.

FOR QUANTITIES OF
SIGNING AND PAVEMENT MARKING ITEMS
SIGNALIZATION ITEMS
LIGHTING ITEMS
BRIDGE AND RETAINING WALL ITEMS
WATER LINE RELOCATION ITEMS
SANITARY SEWER RELOCATION ITEMS

SEE SUMMARY OF QUANTITIES SHEETS IN THEIR APPROPRIATE PLAN SETS.

GENERAL NOTES:

ITEM NOS. 104-1 THROUGH 104-6 ARE ESTIMATED QUANTITIES FOR PREVENTION, CONTROL, AND ABATEMENT OF SOIL EROSION AND WATER POLLUTION. TO BE USED AT LOCATIONS DESIGNATED BY THE ENGINEER.

ITEM NO. 120-6 ANY BORROW EXCAVATION REQUIRED SHALL BE FURNISHED BY THE CONTRACTOR FROM AREAS PROVIDED BY HIM AND/OR BORROW AREA ONE AS SHOWN ON SHEET NUMBER 95 AND THE COST OF FURNISHING SUCH MATERIAL IS TO BE INCLUDED IN THE PRICE FOR EMBANKMENT.

ITEM NO. 524-1-1 INCLUDES 10 SQ.YD'S. FOR CONTINGENCIES TO BE USED, IF NECESSARY, AS DIRECTED BY THE ENGINEER.

ITEM NO. 570-2 INCLUDES 18,105 SQ.YD'S. FOR TEMPORARY GRASSING.
ITEM NO. 570-3 INCLUDES 374 LB'S. FOR TEMPORARY GRASSING.
ITEM NO. 570-5 INCLUDES 1.7 TONS FOR TEMPORARY GRASSING.
ITEM NO. 570-9 INCLUDES 37.4 M. GAL'S. FOR TEMPORARY GRASSING.
ITEM NO. 570-10 INCLUDES 112 LB'S. FOR TEMPORARY GRASSING.

ITEM NO. 575-1 INCLUDES 1,500 SQ.YD'S. FOR CONTINGENCIES TO BE USED, IF NECESSARY, AS DIRECTED BY THE ENGINEER.

FOR SUMMARY OF EARTHWORK SEE SHEET NO. 9.

THE COST OF INFORMATIONAL SIGNS IS TO BE INCLUDED IN THE OVERALL BID. (SEE SHEET NO. 94).

SITE PLAN

NOTES:

Construction on proposed box culvert shall not begin until pier piling shown cross-hatched are driven. The Contractor shall then exercise extreme caution during construction so as not to disturb piling.

Dimensions and angles shown with an asterisk (*) are approximate only. The details, reinforcing and quantities shown were done assuming these to be true. It shall be the Contractor's responsibility to determine accurately these dimensions and angles in the field and to recommend any necessary adjustments to the Engineer. Adjustments shall then be made only with the approval of the Engineer.

GENERAL NOTES

SPECIFICATIONS:

FLORIDA DEPT. OF TRANSPORTATION STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION, dated 1973, and special provisions.

DESIGN:

Designed in accordance with the 1969 edition of the A.A.S.H.O. STANDARD SPECIFICATIONS FOR HIGHWAY BRIDGES with approved revisions.

LOADING:

HS20-44.

MATERIAL STRESSES:

Class II Concrete - f'_c = 3,400 psi ; f_c = 1,360 psi
Reinforcing Steel - f_y = 40,000 psi (min.) ; f_s = 20,000 psi

CHAMFER:

All edges and corners to be chamfered 3/4" unless otherwise noted.

REMOVAL OF EXISTING STRUCTURE:

The existing box culvert shall be removed completely within the limits of construction of the proposed box culvert and the piling for the proposed bridge. In other areas the Contractor shall either completely remove the existing box, or he may elect to destroy the top slab, allowing it to fall into the box, and then fill and compact in a manner to be approved by the Engineer.

GROUT:

The cost of non-shrink grout shall be included in the unit price bid for Class II Concrete.

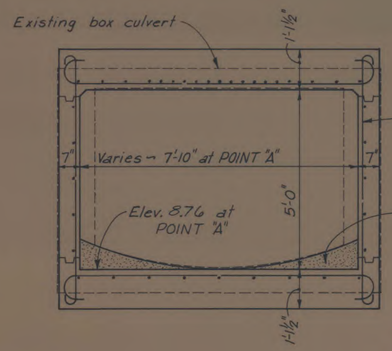
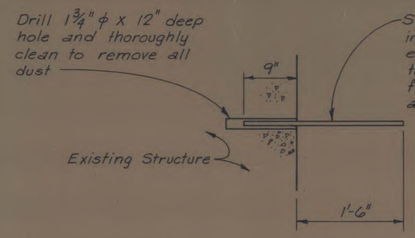
Placement for bars A1 thru A8 shown in PLAN is typical for both top and bottom slabs.



NOTE:
For additional details see SECTION A-A and PLAN.

SECTION B - B



DOWEL DETAIL

Dowel bars E shall be set in existing top and bottom slabs and in each sidewall at a spacing of not more than 12 inches. At least 28 dowels will be required at POINT "A" and at least 36 required at POINT "D".

By WACO	TAMPA-HILLSBOROUGH COUNTY EXPRESSWAY AUTHORITY		Date 11-73

GENERAL NOTES

GENERAL

G-1 NO CHANGES SHALL BE MADE IN THE SIGNALIZATION PLANS WITHOUT THE APPROVAL OF THE RESIDENT ENGINEER.

G-2 THE CONTRACTOR SHALL BE RESPONSIBLE FOR SUBMITTING TO THE PROJECT ENGINEER TWO (2) COPIES OF SUBMITTAL DATA FOR EACH ITEM OF PROPOSED EQUIPMENT TO BE USED AND SHALL HAVE APPROVAL OF SUBMITTAL DATA PRIOR TO THE INSTALLATION.

G-3 ALL EQUIPMENT MUST MEET AND BE INSTALLED IN ACCORDANCE WITH THE D.O.T. PUBLICATION "STANDARD SPECIFICATIONS FOR TRAFFIC SIGNALS AND AUXILIARY EQUIPMENT" REVISED.

G-4 THE CONTRACTOR SHALL REQUIRE THE CONTROLLER MANUFACTURER OR SUPPLIER TO FORWARD THE MAKE, MODEL AND SERIAL NUMBERS OF EACH CONTROLLER, REFERENCED BY JOB NUMBER AND LOCATION NUMBER AS SHOWN ON THE SIGNAL PLANS TO THE RESIDENT ENGINEER.

G-5 THE CONTRACTOR SHALL BE RESPONSIBLE FOR SPECIFYING THE SIZE AND NUMBER OF CONDUCTOR RUNS (PLUS 4 SPARES) AND CONDUIT REQUIRED TO COMPLETELY AND SATISFACTORILY WIRE THE SIGNAL SYSTEM AS OUTLINED AND SHOWN ON THE PLANS. IN ALL INSTANCES, THE "STANDARD SPECIFICATIONS FOR TRAFFIC CONTROL SIGNALS AND AUXILIARY EQUIPMENT" TOGETHER WITH THE LATEST METHODS OF THE NATIONAL ELECTRICAL CODE SHALL BE STRICTLY ADHERED TO. ANY DEVIATIONS OR EXCEPTIONS TO THE ABOVE MUST BE SUBMITTED IN WRITING TO THE RESIDENT ENGINEER FOR HIS REVIEW AND SUBSEQUENT DECISION.

G-6 THE CONTRACTOR SHALL BE RESPONSIBLE FOR INSTALLING THE SERVICE GROUND TO HAVE A RESISTANCE TO GROUND NOT TO EXCEED 25 OHMS AS MEASURED WITH A GROUND "MEGGER".

G-7 THE CONTRACTOR SHALL BE RESPONSIBLE FOR SUBMITTING TO THE RESIDENT ENGINEER TWO (2) COPIES OF A SCHEMATIC SHOWING THE CONDUCTOR RUNS, THE POINTS OF CHANGES AND THE NUMBER OF CONDUCTORS REQUIRED AT EACH POINT.

CONTROLLER

C-1 THE OUTSIDE DOOR AND AUXILIARY DOOR OF ALL CONTROLLER CABINETS TO BE EQUIPPED WITH DIFFERENT CYLINDER LOCKS, TWO KEYS TO EACH LOCK.

C-2 IN ALL CABINETS CONTAINING ACTUATED CONTROLLERS, THERE MUST BE INSTALLED ONE (1) ADDITIONAL SIX (6) TERMINALS STRIP FOR THE ACCOMMODATION OF LOOP TYPE DETECTOR LEADS.

C-3 THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING THE PROPER SIZE FOUNDATION, ACCORDING TO MANUFACTURER'S SPECIFICATIONS, FOR BASE MOUNTED CONTROLLER CABINETS.

C-4 THE CONTROLLER CABINETS SHALL BE OF THE FOLLOWING LISTED MINIMUM OUTSIDE DIMENSIONS. POLE MOUNTED: HEIGHT 31" INCHES, WIDTH, 19½ INCHES DEPTH 13" INCHES BASE MOUNTED, HEIGHT, 47 INCHES, WIDTH, 28 INCHES, DEPTH, 15 INCHES. THE EQUIPMENT, PROPOSED AND FUTURE, SHALL NOT OCCUPY MORE THAN 70% OF THE CABINET CAPACITY.

C-5 THE CONTROLLER BID SHALL HAVE BUILT-IN NON-LOCKING DETECTION CAPABILITIES OR SHALL HAVE INCLUDED IN THE BID A TIME DELAY RELAY TO EFFECT A TIME DELAY FOR OPENING AND CLOSING A CIRCUIT WITHIN A SPECIFIED TIME LIMIT. THE TIME DELAY SHALL BE ADJUSTABLE FROM 2 TO 60 SECONDS. THE RELAY SHALL BE INSERTED ONLY INTO THE CIRCUIT BETWEEN THE CONTROLLER AND THE DETECTOR SPECIFIED.

C-6 ALL SOLID STATE CONTROLLERS ARE REQUIRED TO HAVE AN ADEQUATE NUMBER OF EXTERNAL JACK MOUNTED, HEAVY DUTY TYPE, SIGNAL LIGHT LOAD SWITCHES WITH SUB-BASE TO CARRY THE AMPERAGE FOR THE MAXIMUM NUMBER OF 150 WATT BULBS THAT SHALL BE DISPLAYED AT ANY ONE INTERVAL.

C-7 ALL CONTROLLLERS THAT DO NOT HAVE A BUILT-IN FEATURE TO ELIMINATE CONFLICTING SIGNAL INDICATIONS SHALL HAVE A SOLID STATE DEVICE (WITH A VARIABLE TIME DELAY FEATURE WHICH PREVENTS ERRONEOUS REACTIONS) TO MONITOR THE SIGNAL INDICATIONS AT THE POINT WHERE THE LOAD SWITCHES FEED THE SIGNAL CABLE SO THERE WILL BE NO CONFLICTING SIGNAL INDICATIONS DISPLAYED. IF THIS CONDITION EXISTS, THE UNIT WILL TRANSFER THE SIGNAL TO AN ALL RED INDICATION, PROCEEDED BY A FLASHING OPERATION DISPLAYING A YELLOW FLASHING SIGNAL TO THE ARTERY AND RED FLASHING SIGNAL TO THE SIDE STREET OR STREETS. THE FLASHING CONDITION WILL REMAIN UNTIL THE SYSTEM IS RESET MANUALLY.

C-8 CONTROLLERS SPECIFIED TO OPERATE AS MULTI-PHASE WILL BE COMPLETELY SOLID STATE WITH NO ELECTRO-MECHANICAL RELAYS OR OTHER MOVING PARTS. SOLID STATE PHASE TIMING MODULES SHALL BE INTERCHANGEABLE BETWEEN DIFFERENT CONTROLLERS OF THE SAME MANUFACTURER. EACH MODULE PROVIDES ALL FUNCTIONS FOR A SINGLE TRAFFIC MOVEMENT OF PHASE. EACH CONTROLLER SHALL BE FURNISHED WITH THE APPROPRIATE INTERVAL SEQUENCE UNIT, PHASE SEQUENCE UNIT, CONNECTING CABLE, SWITCHING RELAYS, SOLID STATE FLASHER, SPECIAL SEQUENCE RELAYS AS REQUIRED, VEHICLE DETECTOR RELAYS AND MISCELLANEOUS HARDWARE AND EQUIPMENT. ALL TIMING INTERVALS SHALL BE SELECTABLE OVER THE ENTIRE TIMING RANGE, WITHOUT THE USE OF MULTIPLICATION SWITCHES.

C-9 WHEN SPECIFIED, MULTI-PURPOSE CONTROLLERS PROVIDING FOR ADDITIONAL PHASE CAPACITY BY THE ADDITION OF MODULAR UNITS SHALL DO SO WITHOUT THERE BEING ANY ADDITIONAL WIRING OR CHANGE IN WIRING TO THE CONTROLLER AND/OR FRAME. ALL MOUNTING FRAMES SHALL BE CAPABLE OF ACCEPTING ADDITIONAL FUNCTIONAL OR PHASE MODULES REGARDLESS OF THEIR FUNCTIONAL CHARACTERISTICS. ALL CABINET WIRING REQUIRED FOR FUTURE OPERATION AS SHOWN ON THE OPERATION PLAN SHALL BE INCLUDED SO THAT ALL ACCESSORY UNITS MAY BE ADDED BY JACK MOUNTING OR PLUGGING UNITS. SUFFICIENT NUMBER OF CONDUCTORS SHALL BE FURNISHED TO WIRE FUTURE SIGNAL HEADS AS SHOWN ON THE PLANS, FROM THE CONTROLLER TO THE FIRST DISCONNECT HANGER.

C-10 THE CONTRACTOR MAY BE REQUIRED TO PROVIDE, INSTALL, AND OPERATE ALL PHASE MODULES (PROPOSED AND FUTURE) AS OUTLINED BY THE SIGNAL OPERATION PLAN. AT THE END OF THE OPERATION CHECK BY THE ENGINEER, THE CONTRACTOR SHALL REMOVE ALL FUTURE PHASE MODULES AND INSTALL COVER PLATES.

DETECTOR

D-1 THE CONTRACTORS SHALL BE RESPONSIBLE FOR INSTALLING THE CORRECT PHASE DETECTOR UNITS REQUIRED FOR SEMI-ACTIVATED CONTROLLERS. WHERE MULTIPLE-PHASE DETECTION IS REQUIRED, AS WITH FULL-ACTUATED MULTI-PHASE CONTROLLERS, THE DETECTORS SHALL BE CAPABLE OF DETECTING EACH AND EVERY SEPARATE MOVEMENT AS SHOWN IN THE SIGNAL OPERATING PLAN.

D-2 THE CONTRACTOR SHALL FURNISH ONE DETECTOR UNIT WITH SUFFICIENT POWER SUPPLIES FOR EACH WIRE LOOP DETECTION TO BE IMBEDDED IN ROADWAY. METHODS FOR TUNING MUST BE EXTERNAL AND EASILY ACCESSIBLE. THERE MUST BE PROVIDED ON THE FRONT OF THE DETECTOR UNIT A VISUAL INDICATOR OR LIGHT TO SHOW WHEN ACTUATIONS ARE BEING RECEIVED. THE DETECTOR UNIT (BY MEANS OF A FRONT PANEL MOUNTED SWITCH) MUST BE CAPABLE OF MOTION DETECTION. PRESENCE DETECTION MUST DETECT VEHICLES ENTERING, STATIONARY, IN, LEAVING THE LOOP OR A COMBINATION OF THESE.

D-3 LOOP LOCATION AND SIZE ARE SHOWN ON THE PLANS FOR THE PURPOSE OF GENERAL LOCATION. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ESTABLISHING THE CORRECT SIZE LOOPS TO BE PLACED IN ROADWAY AND CORRECT SIZE A.W.G. WIRE AS REQUIRED BY MANUFACTURER'S SPECIFICATIONS IN ORDER TO ASSURE PROPER OPERATION. WHERE LOOP CONDUCTOR IS RUN OVERHEAD SHIELDED WIRE MUST BE USED.

POLES

P-1 THE CONTRACTOR SHALL BE RESPONSIBLE FOR ESTABLISHING THE AMOUNT OF RAKE TO BE USED ON POLES AT THE TIME OF INSTALLATION.

P-2 IN ACCORDANCE WITH GENERAL NOTE NO. G-3, STRAIN INSULATORS ARE HEREWITH DELETED. ALL TRAFFIC SIGNAL POLES SHALL BE GROUNDED IN ACCORDANCE WITH SECTION 715-11 AS SHOWN IN FLORIDA DEPARTMENT OF TRANSPORTATION STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION OF 1973. ALL SPAN WIRES MUST BE GROUNDED WITH NO. 6 (MIN.) COPPER WIRE.

P-3 CONCERNING PEDESTRIAN PUSH BUTTON DETECTORS, TYPE VII, PARAGRAPH "C", PAGE 84 OF THE "STANDARD SPECIFICATIONS FOR TRAFFIC CONTROL SIGNALS AND AUXILIARY EQUIPMENT" IS HEREWITH DELETED.

TRAFFIC SIGNAL ASSEMBLY

T-1 ALL TRAFFIC SIGNAL ASSEMBLIES TO BE FURNISHED WITH TWELVE INCH (12") LENSES, STANDARD VISORS, DISCONNECT HANGERS, BULBS (150 WATTS, 125 VOLTS) AND HARDWARE FOR SPAN WIRE MOUNTING UNLESS OTHERWISE SPECIFIED IN THE PLANS.

T-2 THERE SHALL BE PROVIDED BY THE MANUFACTURER OF TRAFFIC SIGNAL HEADS A METHOD OF POSITIVE LOCKING. THE METHOD USED SHALL PREVENT ANY MIS-ALIGNMENT DUE TO STRONG WINDS OR OBJECTS WHICH MAY COME IN CONTACT WITH THE SIGNAL HEAD AT THE POINT OF ENTRANCE INTO ANY SIGNAL HEAD A SURE GASKETING METHOD SHALL BE USED TO PREVENT THE ENTRANCE OF ANY WATER.

T-3 THOSE TRAFFIC SIGNAL ASSEMBLY HEADS SHOWN AS FUTURE, SHALL NOT BE INSTALLED DURING THE CHECKOUT OF THE CONTROLLER.

REMOVAL OR ADJUSTMENT OF EXISTING EQUIPMENT

R-1 THE CONTRACTOR SHALL BE RESPONSIBLE FOR RELOCATING ANY EXISTING TRAFFIC SIGNAL EQUIPMENT OR SIGNAL POLES IF NECESSARY TO ACCOMMODATE THE CONSTRUCTION WORK AND STILL PROVIDE ADEQUATELY SAFE TRAFFIC CONTROL. ALL SUCH RELOCATIONS OR ADJUSTMENTS SHALL HAVE THE APPROVAL OF THE RESIDENT ENGINEER.

R-2 THE CONTRACTOR SHALL BE RESPONSIBLE FOR REMOVAL OF ALL EXISTING TRAFFIC SIGNAL EQUIPMENT (SIGNAL HEADS, POLES, SIGNAL HARDWARE AND CONTROLLER) ON THE PROJECT THAT IS NOT INCORPORATED IN THE NEW INSTALLATION AND DELIVER IT DURING NORMAL WORKING HOURS TO:

CITY OF TAMPA
SIGNAL & SIGN MAINTENANCE SHOP
2300 MARITIME BLVD.
TAMPA, FLORIDA 33605

NOTIFICATION TO UTILITIES AND ARRANGEMENTS FOR SAFEGUARDS

N-1 CHAPTER 8AS-4, REGULATION REQUIRING PROTECTIONS IN CLOSE PROXIMITY OF OVERHEAD HIGH-VOLTAGE POWER LINES. WHEN ANY OPERATIONS ARE TO BE PREFORMED IN CLOSE PROXIMITY (6 FEET) OF ANY POWER LINE, THE PERSON OR PERSONS RESPONSIBLE FOR THE WORK TO BE DONE SHALL PROMPTLY NOTIFY THE UTILITY COMPANIES INVOLVED. THEY SHALL ALSO BE RESPONSIBLE FOR THE COMPLETION OF THE SAFETY MEASURES REQUIRED IN SECTION 4.04 THROUGH 4.07 BEFORE PROCEEDING WITH ANY ACTIVITY WHICH MAY NOT CONFORM TO THE REQUIRED CLEARANCES OR OTHER REQUIREMENTS.

GENERAL AUTHORITY: 440.56(2) FLORIDA STATUTES
LAW IMPLEMENTED: 440.56 FLORIDA STATUTES
HISTORY: AMENDED 4-1-71, 5-1-72

MATERIAL SPECIFICATIONS

1. Tapered tubes (S.A.E.-1020 Steel processed to minimum yield stress of 55,000 lbs. P.S.I., & galv. as per ASTM-A123.
2. Cast anchor base and handhole frame, ASTM-A 27, Grade 65-35.
3. Handhole cover plate, 11 gauge steel, S.A.E.-1015.
4. Cast aluminum pole top, aluminum alloy 43.
5. Span wire clamp, low alloy, high strength steel ASTM-A 242 or 375, load producing distortion 12,500 lbs. direct tension.
6. All bolts and nuts less than 5/8" diameter passivated stainless steel AISI-300 series, commercial grade.
7. All bolts and nuts 5/8" dia. and over, ASTM-A 307 and galvanized in accordance with ASTM-A 153.
8. Anchor base and U-bolts, high strength steel minimum yield stress 55,000 lbs. P.S.I.
9. Welding rod, ASTM-A 233, class E60XX or 70XX.
10. Galvanizing, as per ASTM-A123.
11. Painting, when specified, inside of poles red lead primer. Outside of poles zinc chromate, iron oxide primer.
12. The taper shall be 0.14 of an inch per linear foot, measured as change in diameter.

	6C		1
By GES	TAMPA-HILLSBOROUGH COUNTY EXPRESSWAY AUTHORITY		Date:

TAMPA - HILLSBOROUGH COUNTY EXPRESSWAY AUTHORITY

—PLANS OF PROPOSED—

SOUTH CROSSTOWN EXPRESSWAY

HILLSBOROUGH COUNTY TAMPA, FLORIDA

STATE PROJECT NO. 10002 - 3518 - 032

THIS CONTRACT PLAN SET INCLUDES:
- ROADWAY PLANS
- SIGNING AND PAVEMENT MARKING PLANS
- RIGHT - OF - WAY MAP

INDEX OF ROADWAY PLANS:

SHEET NO.	SHEET DESCRIPTION
1	KEY MAP
2	DRAINAGE MAP
3	TYPICAL SECTIONS
4	SUMMARY OF QUANTITIES
5 - 7	PLAN & PROFILE SHEETS
8 - 9	DRAINAGE STRUCTURE SECTIONS
10	SPECIAL PROFILES
11	SOILS INFORMATION SHEET
12 - 14	CROSS SECTIONS
15	STORAGE LOT LOCATION MAP
16	PROJECT INFORMATION SIGN

STANDARD DRAWINGS:

INDEX NO.	DRAWINGS
GEC - 05	EROSION CONTROL DEVICES, BALED HAY OR STRAW
GSA - 01	STANDARD ABBREVIATIONS
195	STANDARD SYMBOLS FOR KEY MAPS AND PLAN SHEETS (3 SHEETS)
1101 - W	MISCELLANEOUS ROADWAY CONSTRUCTION (2 SHEETS)
2300 - S	GUARDRAIL CONSTRUCTION DETAILS (5 SHEETS)
2892 - A	INLETS TYPE "TS"
5016 - B	TURNOUT DETAILS
5047 - G	INLET, MANHOLE, AND JUNCTION BOX TYPE P AND J (2 SHEETS)
5061 - E	MISC. DRAINAGE DETAILS (2 SHEETS)
5075 - B	SUPERELEVATION DETAILS FOR MUNICIPAL CONSTRUCTION (2 SHEETS)
5080 - G	CURB, CURB AND GUTTER, AND TRAFFIC SEPARATOR (2 SHEETS)

By: WACO	TAMPA-HILLSBOROUGH COUNTY EXPRESSWAY AUTHORITY		Date: 1972

WATSON AND COMPANY
ENGINEERING DIVISION
3013 HORATIO STREET
TAMPA, FLORIDA

NOTE; FOR QUANTITIES OF SANITARY SEWER RELOCATION AND WATER DISTRIBUTION RELOCATION SEE APPROPRIATE PLANS.

ITEM NO. 102-37 IS TO BE ACCOMPLISHED IN ACCORDANCE WITH THE STATE OF FLORIDA MANUAL ON TRAFFIC CONTROL AND SAFE PRACTICES FOR STREET AND HIGHWAY CONSTRUCTION, MAINTENANCE AND UTILITY OPERATIONS.
ITEM NO. 102-39 IS A CONTINGENCY ITEM TO BE USED IF NECESSARY AS DIRECTED BY THE ENGINEER.
ITEM NO'S. 104-32, 104-34, & 104-37 ARE ESTIMATED QUANTITIES FOR PREVENTION, CONTROL, AND ABATEMENT OF EROSION & WATER POLLUTION AND ARE TO BE USED AT LOCATIONS AS DESIGNATED BY THE PLANS OR AS DIRECTED BY THE ENGINEER.
ITEM NO. 102-40 IS A CONTINGENCY ITEM TO BE USED IF NECESSARY AS DIRECTED BY THE ENGINEER.
ITEM NO. 110-1- SOME AREAS, INCLUDING BUILDINGS, MAY REQUIRE SELECTIVE CLEARING AS DIRECTED BY THE ENGINEER.
ITEM NO. 440-1-2 INCLUDES 1200 LIN. FT. FOR CONTINGENCY TO BE USED IF NECESSARY AS DIRECTED BY THE ENGINEER.
ITEM NO. 522-1 INCLUDES 50 SQ. YDS. FOR CONTINGENCY.
ITEM NO. 522-2 " 20 " " " "
ITEM NO. 570-2 " 17,278 SQ. YDS. FOR TEMPORARY GRASSING.
ITEM NO. 570-3 " 358 LBS. " " "
ITEM NO. 570-4 " 14.28 TONS " " "
ITEM NO. 570-5 " 11.63 " " " "
ITEM NO. 570-9 " 27.4 M. GALS. " " "
ITEM NO. 570-10 " 101.0 LBS. " " "
ITEM NO. 536-1-1 NO END ANCHORAGES REQUIRED.

THE CONTRACTOR, AFTER COMPLETING CONSTRUCTION OF NEW PAVEMENT WILL REPLACE ALL OLD TRAFFIC MARKINGS WITH NEW TRAFFIC MARKINGS. THIS WORK WILL NOT BE PAID FOR SEPARATELY, BUT SHALL BE PAID FOR INCIDENTAL TO PAVING.

ALL UTILITIES SHOWN ON THE PLANS ARE TAKEN FROM INFORMATION SUPPLIED BY THE UTILITY OWNERS. THESE ARE SHOWN FOR INFORMATION PURPOSES ONLY AND THE CONTRACTOR WILL BE RESPONSIBLE FOR VERIFICATION OF THE EXACT LOCATION OF ALL UTILITIES.

(a) GUARDRAIL STATIONS ARE APPROXIMATE. EXACT LOCATIONS TO BE DETERMINED BY THE ENGINEER.

SUMMARY OF EARTHWORK

ROADWAY EXCAVATION	= 69096 CU YD
ROADWAY FILL +25%	= 27130 CU YD
EXCESS	= 41946 CU YD

NOTE:
EXCESS EXCAVATION MATERIALS SHALL BE PLACED AT A LOCATION DESIGNATED BY THE ENGINEER.
THIS MATERIAL WILL BE USED IN THE EMBANKMENT OF THE EXPRESSWAY AND SHALL BE PLACED IN ACCORDANCE WITH THE SPECIFICATIONS FOR EMBANKMENT.

Note: Due to excessive traffic and poor Detour facilities, also Storm Sewer being in good condition it was found feasible not to tear up entire intersection and construct only the additional areas as shown on Plans, also overlay existing intersection eliminating closing of Streets. New Inlets were tied into Existing Sewer & existing Inlets removed.

PLAN

Notes:

Plan Dimensions are approximate but are as close as practical to being correct. They shall be adjusted to suit actual conditions. Existing Pipes and Box Culvert were located as near as practical by field measurements and old plans. The end lengths of the existing Pipes (60" ϕ), a portion of the existing Box Culvert and the existing Junction Box are to be removed.

Existing invert elevations are to be matched as close as practical with the top of the bottom slab.

Live Load - COOPER E-72.

AS BUILT

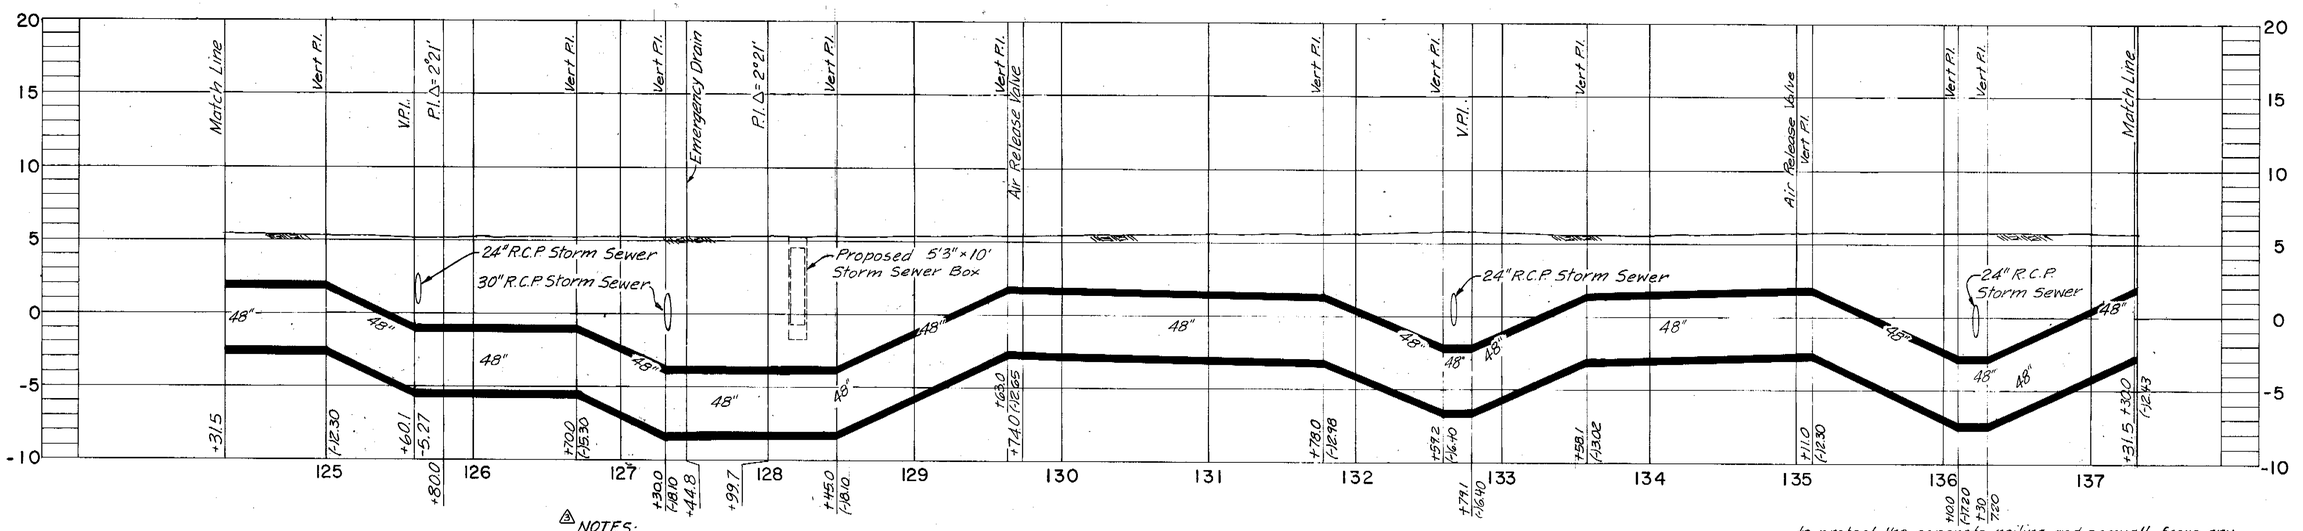
△PLAN

Existing Pavement: Asphaltic Concrete on Red Brick



△NOTES:

1. Under no circumstances shall the Contractor operate any equipment or store any materials upon the grassed median parkway along Bayshore Blvd. other than light-weight trenching equipment as required to install air release and emergency drain piping. The Contractor shall protect the grassed median parkway and its adjacent curb from any damage due to his operations.
2. The Contractor shall take all precautions necessary to protect the concrete railing and seawall from any damage due to his operations.

GENERAL NOTES

1. ALL ELEVATIONS ARE REFERRED TO THE MEAN SEA LEVEL DATUM OF THE U.S.C. AND G.S. (N.O.S.).
2. LOCATIONS, ELEVATIONS AND DIMENSIONS OF EXISTING UTILITIES, STRUCTURES AND OTHER FEATURES ARE SHOWN ACCORDING TO THE BEST INFORMATION AVAILABLE AT THE TIME OF THE PREPARATION OF THESE PLANS BUT DO NOT PURPORT TO BE ABSOLUTELY CORRECT. THE CONTRACTOR SHALL VERIFY THE LOCATIONS, ELEVATIONS, AND DIMENSIONS OF ALL EXISTING UTILITIES, STRUCTURES AND OTHER FEATURES AFFECTING HIS WORK PRIOR TO CONSTRUCTION.
3. THE CONTRACTOR SHALL PROVIDE AT LEAST 48 HOURS NOTICE TO THE VARIOUS UTILITY COMPANIES IN ADVANCE OF CONSTRUCTION, BY CALLING CANDY: 1-800-282-8881.
4. WHERE CONNECTIONS TO EXISTING WALKS AND DRIVES ARE NOT INDICATED ON THE PLANS, PROPER CONNECTIONS SHALL BE MADE AT DIRECTION OF THE ENGINEER.
5. STATIONS GIVEN ARE TO THE CENTERLINE OF THE INLETS AND MANHOLES.
6. THE CONTRACTOR SHALL COMPLY WITH THE PROVISIONS OF THE LATEST "TREE ORDINANCE" OF THE CITY OF TAMPA. THE CONTRACTOR IS REQUIRED TO RELOCATE THE TREES REMOVED AS A PART OF THE NECESSARY CONSTRUCTION INDICATED ON PLANS. HOWEVER, NO TREE SHALL BE REMOVED WITHOUT APPROVAL OF THE ENGINEER. CONTRACTOR SHALL PROTECT TREES TO REMAIN.
7. STREET SIGNS, STREET MARKERS AND R-O-W MARKERS SHALL BE REMOVED AND RELOCATED AS DIRECTED BY THE ENGINEER.
8. WHEN IN CONFLICT, UTILITY POLES, GAS LINES, UNDERGROUND ELECTRIC AND TELEPHONE CABLES WILL BE RELOCATED BY THE RESPECTIVE UTILITY OWNERS AT THEIR OWN EXPENSE AS DIRECTED BY THE ENGINEER.
9. DRIVEWAYS SHALL BE RECONSTRUCTED IN ACCORDANCE WITH CHAPTER 45, ARTICLE XIII OF THE CITY CODE, AS AMENDED BY ORDINANCE NO. 7582-A ADOPTED MARCH 17, 1981. DEVIATION FROM THE ESTABLISHED STANDARDS SHALL BE APPROVED BY THE CITY TRAFFIC ENGINEER.
10. USE CLASS 'C' BEDDING FOR ALL PIPES.
11. ALL PRECAST STRUCTURES SHALL FOLLOW D.O.T. CITY STANDARDS AS WELL AS SPECIFIC PROVISIONS
12. THE CONTRACTOR IS RESPONSIBLE FOR COMPLIANCE WITH ALL CURRENT ENVIRONMENTAL AND PERMIT RULES AND REGULATIONS OF THE CITY, STATE, (D.E.R. & SWFWMD), TAMPA PORT AUTHORITY, E.P.C. AND OTHERS.
13. PRIOR TO ANY CONSTRUCTION, CONTACT TAMPA ELECTRIC CO. (PH. 228-4714) FOR EXACT LOCATION OF UNDERGROUND LINES. TECO TO RELOCATE ANY CONFLICTING LINES.
14. IF LESS THAN 18" OF CLEARANCE IS NOT PROVIDED BETWEEN ANY OF THE 8" VCP SANITARY SEWERS OR 6" VCP SANITARY HOUSE CONNECTIONS AND THE PROPOSED STORM SEWERS CROSSING, REMOVE THE VCP AND AND REPLACE IT WITH THE SAME SIZE, CLASS 54 DIP WITH POLYBOND LINING, CONNECT WITH APPROVED FLEXIBLE CONNECTIONS.
15. ALL INLET APRONS SHALL BE 6" THICK CONCRETE OVER COMPACTED BASE. IF CURB IS SHOWN ON THE SIDES OF THE APRON, IT SHALL BE CONSTRUCTED INTEGRALLY WITH THE APRON. APRONS SHALL BE CONSTRUCTED AT 45 DEGREE ANGLES TO THE EDGE OF PAVEMENT.
16. ALL RCP'S AND ERCP'S SHALL BE MANUFACTURED AND INSTALLED WITHOUT LIFTHOLES.
17. ALL RCP'S AND ERCP'S SHALL BE CLASS III UNLESS NOTED OTHERWISE ON THE PLANS.

EROSION CONTROL

1. The erosion control shall comply with SP-21 (Latest Specification) along with the current Local, State and Federal erosion control regulations.
2. D.O.T. Index No. 102 (sheet 2 of 3) baled hay or straw barriers and silt fences is included as part of this sheet set for erosion control during construction.

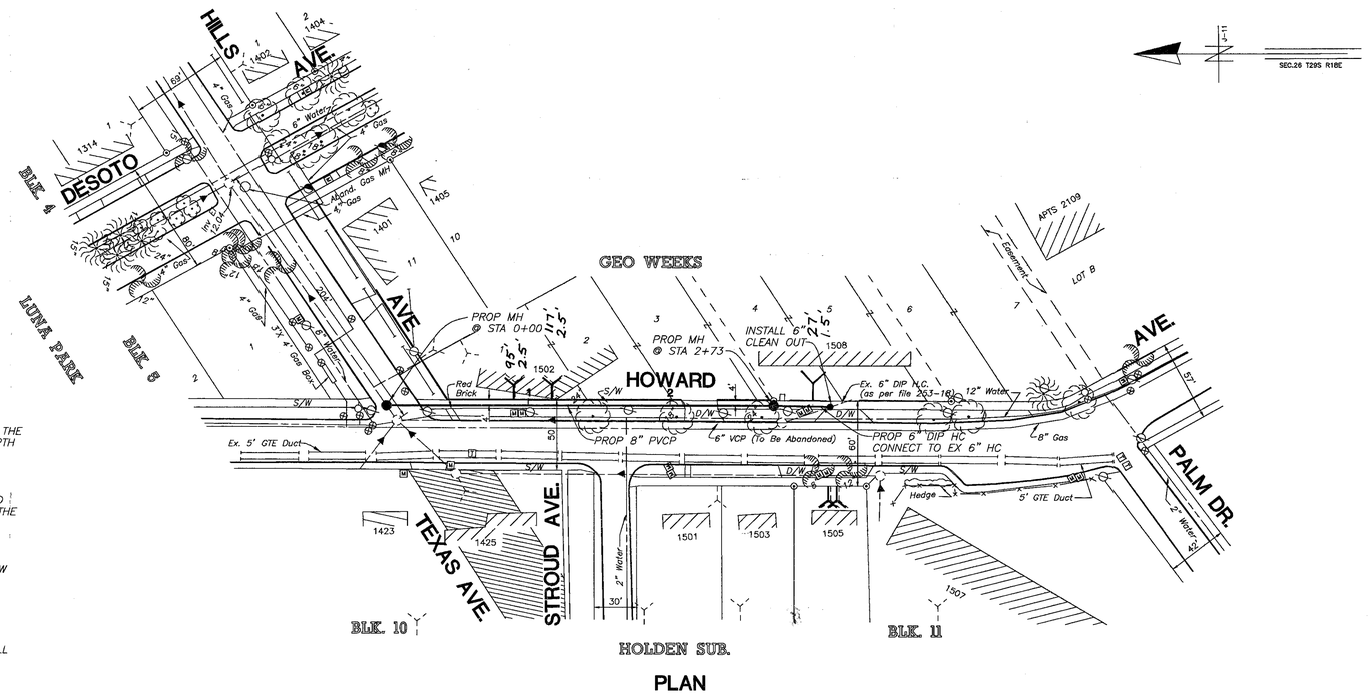
Q.16 Renewal and Replacement, Sewage Disposal System – Howard Ave: Hills Ave to Palm Dr



PLAN

NOTES

1. ALL ELEVATIONS ARE BASED ON NOS DATUM UNLESS OTHERWISE NOTED.
2. LOCATIONS OF EXISTING UNDERGROUND UTILITIES WERE PREPARED FROM THE MOST RELIABLE INFORMATION AVAILABLE. VERIFY THE LOCATION AND DEPTH OF ALL PERTINENT UTILITIES PRIOR TO CONSTRUCTION. NOTIFY UTILITY COMPANIES AT LEAST 48 HOURS BEFORE BEGINNING CONSTRUCTION, BY CALLING 1-800-432-4770.
3. NEW HOUSE CONNECTION LOCATIONS ARE APPROXIMATE ONLY. REQUIRED LOCATION AND DEPTH WILL BE COORDINATED WITH THE HOMEOWNER AT THE TIME OF CONSTRUCTION BY THE D.S.S. CONSTRUCTION CREWS.
4. WHERE AN EXISTING SEWER IS TO BE REMOVED OR ABANDONED AND REPLACED WITH A NEW SEWER, CONTINUOUS SEWER SERVICE MUST BE MAINTAINED AT ALL TIMES, WHILE CONNECTING THE LATERALS TO THE NEW SEWER IN PLACE.
5. THE MINIMUM CLEARANCE BETWEEN SEWERS AND WATER LINES SHALL BE 6" UNDER ALL CIRCUMSTANCES. IF THE SEWER IS BELOW A WATER LINE AND HAS BETWEEN 6" AND 18" OF CLEARANCE, OR IF THE SEWER IS ABOVE THE WATER LINE REGARDLESS OF CLEARANCE, THEN A NOMINAL 20' LENGTH OF GREEN AWWA CLASS 150 C900 PVC PIPE SHALL BE CENTERED OVER/UNDER THE WATER LINE.
6. 1505 S. HOWARD TO BE CONNECTED TO THE EXISTING 8" LINE ON THE WEST PARKWAY OF HOWARD AVENUE.
7. 6" VCP LINE TO BE ABANDONED WILL BE GROUTED BY CITY FORCES.

GENERAL NOTES

1. CITY OF TAMPA STANDARD DRAWINGS ARE AVAILABLE AT THE CITY HALL ANNEX, 306 E. JACKSON STREET, 5TH FLOOR, NORTH WING.
2. ALL ELEVATIONS REFER TO THE MEAN SEA LEVEL DATUM OF THE U.S.C. AND G.S. (M.S.L.).
3. LOCATIONS, ELEVATIONS, AND DIMENSIONS OF THE EXISTING UTILITIES, STRUCTURES, AND OTHER FEATURES ARE SHOWN ACCORDING TO THE BEST INFORMATION AVAILABLE AT THE TIME OF THE PREPARATION OF THESE PLANS BUT DO NOT PURPORT TO BE ABSOLUTELY CORRECT. THE CONTRACTOR SHALL VERIFY THE LOCATIONS, ELEVATIONS, AND DIMENSIONS PRIOR TO CONSTRUCTION.
4. THE CONTRACTOR SHALL CALL SUNSHINE (1-800-432-4770) AT LEAST 48 HOURS PRIOR TO ANY CONSTRUCTION ACTIVITY.
5. WHEN IN CONFLICT, UTILITY POLES, GAS LINES, UNDERGROUND ELECTRIC AND TELEPHONE CABLES WILL BE RELOCATED BY THE RESPECTIVE UTILITY OWNERS AT THEIR OWN EXPENSE AS DIRECTED BY THE ENGINEER.
6. PRIOR TO ANY CONSTRUCTION, THE CONTRACTOR SHALL NOTIFY THE FOLLOWING:

TAMPA ELECTRIC CO.	AT 228-4111
CITY SANITATION DEPT.	AT 237-7288
GTE	AT 985-8435
PEOPLES GAS	AT 272-1551
TAMPA WATER DEPT.	AT 259-1633

7. SPECIAL CARE MUST BE TAKEN TO PROTECT WATER LINES DURING CONSTRUCTION. THE CONTRACTOR SHALL PROVIDE SUPPORTS AS NECESSARY AT NO EXPENSE TO THE CITY.
8. STATIONS AND OFFSETS REFER TO THE SURVEY BASELINE OR TO THE CONSTRUCTION CENTERLINE AS NOTED.
9. STATIONS AND OFFSETS FOR INLETS AND MANHOLES REFER TO THE CENTERPOINT OF THE STRUCTURE. CURB INLETS SHALL BE POSITIONED LONGITUDINALLY ACCORDING TO STATIONING GIVEN AND LATERALLY ACCORDING TO THE APPROPRIATE STANDARD, UNLESS NOTED OTHERWISE. CURB INLET TOP AND THROAT ELEVATIONS SHALL BE BASED ON THE EDGE-OF-PAVEMENT ELEVATION (GIVEN OR CALCULATED) AND THE APPROPRIATE STANDARD. INLET THROAT ELEVATIONS TO BE DETERMINED BY THE CONTRACTOR FROM THE EDGE-OF-PAVEMENT ELEVATION.
10. MANHOLE TOP ELEVATIONS TO BE DETERMINED BY THE CONTRACTOR AS PER PROPOSED STREET GRADES PROVIDED. IF DISTANCE BETWEEN TOP SLAB AND GRADE IS LESS THAN 7", THE CONTRACTOR SHALL PROVIDE INVERTED MANHOLE FRAME AND COVER AT NO ADDITIONAL COST TO THE CITY.
11. ALL CURB RADII, P.I., P.C., AND P.T. REFER TO THE EDGE-OF PAVEMENT UNLESS NOTED OTHERWISE.
12. NO TREES NOR TREE ROOTS SHALL BE REMOVED WITHOUT THE PRIOR APPROVAL OF THE ENGINEER.
13. ALL DISTURBED AREAS SHALL BE SODDED AS DIRECTED BY THE ENGINEER.
14. WHERE CONNECTIONS TO EXISTING WALKS AND DRIVES ARE NOT INDICATED ON THE PLANS, PROPER CONNECTIONS SHALL BE MADE AT THE DIRECTION OF THE ENGINEER.
15. STREET SIGNS, STREET MARKERS, AND R-O-W MARKERS SHALL BE REMOVED AND RELOCATED AS DIRECTED BY THE ENGINEER. NO SEPARATE PAYMENT SHALL BE MADE FOR THESE ACTIVITIES. ANY LOST OR DAMAGED SIGNS OR MARKERS SHALL BE REPLACED BY THE CONTRACTOR AT NO COST TO THE CITY.
16. THE CONTRACTOR SHALL REPLACE EXISTING DRIVEWAYS FROM THE EDGE OF PAVEMENT TO THE R-O-W LINE, WHEREVER AFFECTED BY CONSTRUCTION. MATERIALS SIMILAR TO THE EXISTING SHALL BE USED UNLESS NOTED OTHERWISE OR IN THE CASE OF UNPAVED DRIVEWAYS, A 6" THICK LAYER OF COMPACED SHELL SHALL BE INSTALLED OR AS SHOWN ON THE PLANS.
17. THE CONTRACTOR IS RESPONSIBLE FOR COMPLIANCE WITH ALL ENVIRONMENTAL RULES AND REGULATIONS OF THE CITY, COUNTY, STATE, TAMPA PORT AUTHORITY, ARMY CORPS OF ENGINEERS, AND ANY OTHER JURISDICTIONAL AGENCIES, AND ALL CONDITIONS SET FORTH IN ENVIRONMENTAL PERMITS.
18. ALL ROP'S AND EROP'S SHALL BE CONSTRUCTED WITHOUT LIFT-HOLES AND SHALL BE CLASS III UNLESS NOTED OTHERWISE IN THE PLANS.
19. EXISTING SANITARY SEWER LATERALS WHICH ARE TO BE EXTENDED SHALL BE CONSTRUCTED TO AND CONNECTED AT THE PROPERTY LINE, WHILE MAINTAINING CONTINOUS SEWER SERVICE. CLEANOUTS (PLASTIC OR CAST IRON) SHALL BE INCLUDED IN THE PRICE OF THE LATERAL EXTENSIONS AND NO SEPARATE PAYMENT SHALL BE MADE.
20. ALL PIPES UP TO 24" DIA. OR EQUAL SHALL HAVE CLASS "C" BEDDING. MAXIMUM TRENCH WIDTH OF THE PIPE BEDDING SHALL BE EQUAL TO THE OUTSIDE DIAMETER OF THE PIPE BARREL PLUS 2 FEET. PIPES OVER 24" DIA. SHALL HAVE CLASS B BEDDING. REFER TO THE DEPARTMENT OF SANITARY SEWERS STANDARD DETAIL. COST OF STANDARD BEDDING SHALL BE INCLUDED IN THE COST FOR PIPES.
21. THE CONTRACTOR SHALL USE ALL SURPLUS FILL APPROVED AS SUITABLE FROM EXCAVATION PRIOR TO SUPPLYING FILL FROM OTHER SOURCES. PAYMENT FOR ADDITIONAL FILL WILL BE MADE ONLY FOR FILL SUPPLIED FROM SOURCES OTHER THAN EXCAVATIONS IN THIS CONTRACT. SEE SPECIFICATIONS FOR MATERIALS REQUIREMENTS.
22. EXISTING PAVEMENT SHALL BE SAWCUT AT THE LIMITS OF PAVEMENT RECONSTRUCTION. SAWCUTTING SHALL BE INCLUDED IN THE COST OF THE OTHER VARIOUS CONTRACT ITEMS AND NO SEPARATE PAYMENT SHALL BE MADE.
23. DISPOSAL OF CONSTRUCTION AND DEMOLITION DEBRIS MAY ONLY OCCUR AT OFFSITE DISPOSAL FACILITIES APPROVED BY THE FLORIDA DEPARTMENT OF ENVIRONMENTAL PROTECTION.
24. BALED HAY OR STRAW BARRIERS AND/OR SILT FENCES MEETING FDOT INDEX #102 SHALL BE USED AS DIRECTED BY THE ENGINEER AS NECESSARY FOR SEDIMENT AND EROSION CONTROL DURING CONSTRUCTION. COST OF EROSION CONTROL SHALL BE INCLUDED IN THE COST OF THE OTHER VARIOUS CONTRACT ITEMS AND NO SEPARATE PAYMENT SHALL BE MADE.
25. CURB-AND-GUTTER ENDINGS SHALL CONFORM TO CITY OF TAMPA DPW STANDARD DRAWING P-3.
26. WHERE SANITARY SEWER HOUSE LATERALS ARE NOT SHOWN ON THE PLANS, NO INFORMATION IS AVAILABLE. CONTRACTOR SHALL VERIFY LOCATIONS OF LATERALS PRIOR TO CONSTRUCTION.
27. MAIL BOXES SHALL BE REMOVED AND RELOCATED AS DIRECTED BY THE ENGINEER. NO SEPARATE PAYMENT SHALL BE MADE FOR THIS ACTIVITY. LOST OR DAMAGED MAIL BOXES SHALL BE REPLACED BY THE CONTRACTOR AT NO COST TO THE CITY.
28. ALL DRAINAGE STRUCTURES SHALL HAVE SELECT BEDDING MATERIAL (12" THICK CRUSHED ROCK) UNDER THE STRUCTURE, UNLESS OTHERWISE NOTED ON THE PLAN OR IN THE SPECIFICATION OR INSTRUCTED BY THE ENGINEER.
29. ALL REINFORCED CONCRETE PIPE (ROUND OR ELLIPTICAL) SHALL BE INSTALLED WITH A NUN-WOVEN FILTER FABRIC JACKET AS PER THE DETAIL ON THE CITY OF TAMPA STANDARD DRAWING NUMBER D-13.
30. REFER TO PROJECT SPECIFICATIONS FOR ADDITIONAL INFORMATION AND REQUIREMENTS. COMPLETE CONSTRUCTION DOCUMENTS CONSIST OF PLANS PLUS COMPLETE SPECIFICATIONS (GENERAL PROVISIONS, TECHNICAL SPECIFICATIONS, SPECIFIC PROVISIONS AND ANY ADDENDA), AND CITY AND FDOT STANDARDS, AS APPLICABLE.
31. EXISTING STORMWATER FACILITIES WHICH WILL BE REMOVED FROM SERVICE, INCLUDING PIPES, MANHOLES, MITERED END SECTIONS, ETC., SHALL BE REMOVED AND NOT ABANDONED IN PLACE.
32. INLET TOPS CONSTRUCTED AT CURB RETURNS SHALL BE CAST-IN-PLACE TO MATCH PROPOSED RADII.

SURVEYOR'S REPORT

MAP OF RECORD SURVEY:

SEE SHEET 2 FOR MAP OF SURVEY.
THE MAP AND REPORT ARE NOT FULL AND COMPLETE WITHOUT THE OTHER.

LEGAL DESCRIPTION:

SEE APPLICABLE
(FIELD DATA SOURCE 3)

ACCURACY:

1. THE ACCURACY STANDARD USED FOR THE HORIZONTAL CONTROL FOR THIS SURVEY, AS CLASSIFIED IN THE MINIMUM TECHNICAL STANDARDS (61G17-6 F.A.C.) FOR "COMMERCIAL/HIGH RISK". THE MINIMUM RELATIVE DISTANCE ACCURACY FOR THIS TYPE OF SURVEY IS 1 FOOT IN 10,000 FEET. THE ACCURACY OBTAINED BY MEASUREMENT AND CALCULATION OF A CLOSED GEOMETRIC FIGURE WAS FOUND TO EXCEED THIS REQUIREMENT.

2. METHODS FOR ALL HORIZONTAL CONTROL MEASUREMENTS WERE MADE WITH A TRANSIT AND STEEL TAPE, OR DEVICES WITH EQUIVALENT OR HIGHER DEGREES OF ACCURACY.

3. THE FIELD MEASURED VERTICAL CONTROL FOR ELEVATION INFORMATION SHOWN UPON THIS MAP OF SURVEY IS BASED ON A LEVEL LOOP, AND THE ACCURACY OF THE CLOSURE (IN FEET) EXCEEDS STANDARD OF PLUS OR MINUS 0.05 FEET TIMES THE SQUARE ROOT OF THE DISTANCE IN MILES. (SEE DATA SOURCE: MARKER 3)

DATA SOURCES:

1. THIS SURVEY WAS PREPARED WITHOUT THE BENEFIT OF A COMMITMENT FOR TITLE INSURANCE.

2. NO INFORMATION FOR THE ADJOINING PROPERTY OWNERS WAS SUPPLIED TO THE SURVEYOR.

3. ELEVATIONS ARE BASED UPON THE CITY OF TAMPA, DEPARTMENT OF PUBLIC WORKS SURVEY SECTION CONTROL BENCH MARK USED, DESIGNATED AS 2005 - CIRCUIT NO. 648, PUBLISHED ELEVATION = 13.099 FEET, NATIONAL GEODETIC VERTICAL DATUM (NGVD) SEA LEVEL DATUM OF 1929.

4. THIS SURVEY WAS PREPARED WITH THE BENEFIT OF AN ELECTRONIC DRAWING FILE PROVIDED BY CITY OF TAMPA, DEPARTMENT OF PUBLIC WORKS, TRANSPORTATION DIVISION, ELECTRONIC DRAWING FILE NUMBER 95-73P.dwg AND THAT CERTAIN SET OF PLANS TITLED CITY OF TAMPA, HOWARD AVE. & BAYSHORE BLVD. INTERSECTION IMPROVEMENTS, SHEETS 1-9, FILE NO. 95-73-CS, JOB NO. 4838, CITY OF TAMPA, DEPARTMENT OF PUBLIC WORKS, CITY OF TAMPA, FLORIDA, AND ALSO PROVIDED BY CITY OF TAMPA, DEPARTMENT OF PUBLIC WORKS, TRANSPORTATION DIVISION.

5. PLAN STATION AND OFFSETS SHOWN FOR ALL STRUCTURES ARE BASED UPON THAT CERTAIN SET OF PLANS TITLED CITY OF TAMPA, HOWARD AVE. & BAYSHORE BLVD. INTERSECTION IMPROVEMENTS, SHEETS 1-9, FILE NO. 95-73-CS, JOB NO. 4838, CITY OF TAMPA, DEPARTMENT OF PUBLIC WORKS, CITY OF TAMPA, FLORIDA, PROVIDED BY CITY OF TAMPA, DEPARTMENT OF PUBLIC WORKS, TRANSPORTATION DIVISION. FIELD STATION AND OFFSETS SHOWN FOR ALL STRUCTURES AND/OR FITTING ARE FROM THE CENTER OF STRUCTURE AND/OR FITTING AND ARE CALCULATED USING FIELD LOCATED POINTS.

LIMITATIONS:

1. USE OF THIS SURVEY BY ANYONE OTHER THAN THOSE PREPARED FOR/CERTIFIED TO, WILL BE THE RE-USERS SOLE RISK WITHOUT LIABILITY TO THE SURVEYOR.

2. THERE MAY BE ADDITIONAL EASEMENTS AND/OR RESTRICTIONS AFFECTING THIS PROPERTY THAT MAY BE FOUND IN THE PUBLIC RECORDS OF THIS COUNTY.

3. THE LOCATIONS OF THE UNDERGROUND UTILITIES AND / OR THEIR APPURTENANCES WERE PERFORMED BY A FIELD SURVEY AND ONLY LOCATED AS SHOWN ON THE FACE OF THE SURVEY. ONLY THE UNDERGROUND UTILITIES AND/OR THEIR APPURTENANCES WHICH WERE VISIBLE FROM GROUND LEVEL TO THE SURVEYOR ON THE ACTUAL DAY OF THE FIELD SURVEY WERE LOCATED. NO EXCAVATIONS OR SUBSURFACE WORK EFFORTS OF ANY KIND WERE PERFORMED BY THE SURVEYOR TO VERIFY THE EXISTENCE OF ANY UNDERGROUND UTILITIES AND/OR THEIR APPURTENANCES. THE SURVEYOR MAKES NO GUARANTEE THAT THE UNDERGROUND UTILITIES AND/OR THEIR APPURTENANCES SHOWN COMPRISE ALL SUCH UTILITIES IN THE AREA, EITHER IN SERVICE OR ABANDONED.

4. PRINTED DIMENSIONS SHOWN ON THE SURVEY SUPERSEDE SCALED DIMENSIONS. THERE MAY BE ITEMS DRAWN OUT OF SCALE TO GRAPHICALLY SHOW THEIR LOCATION.

5. UNDERGROUND FOUNDATIONS AND THEIR LOCATIONS HAVE NOT BEEN DETERMINED.

6. IRRIGATION EQUIPMENT AND / OR THEIR APPURTENANCES HAVE NOT BEEN LOCATED UNLESS OTHERWISE SHOWN HEREON.

7. LAST DATE OF FIELD WORK 7/06/1998.

BOUNDARY INCONSISTENCIES:

NOT APPLICABLE.

APPARENT PHYSICAL USE:

1. THE SUBJECT PROPERTY IS UNDER CONSTRUCTION.

EASEMENTS/RIGHT-OF-WAYS

1. NO EASEMENT INFORMATION AFFECTING THE PROPERTY WAS SUPPLIED TO THE SURVEYOR.

END AREAS Sq. Ft.		VOLUME Cu. Yds.	
Cut	Fill	Cut	Fill

THE UTILITIES IN THE CROSS SECTIONS ARE SHOWN FROM THE BEST INFORMATION AVAILABLE AT THE TIME OF PLAN PREPARATION. GRAVITY FLOW SANITARY SEWER PIPE AND STORMWATER PIPE INVERTS ARE CALCULATED USING INVERTS TAKEN FROM FIELD SURVEY. WATER LINES, SANITARY SEWER FORCE MAINS, OTHER PRESSURE LINES SUCH AS GAS MAINS, AND FACILITIES SUCH AS POWER, TELEPHONE, OR CABLE TV CONDUIT MAY BE SHOWN IN AN APPROXIMATE LOCATION ONLY. THE CONTRACTOR IS RESPONSIBLE FOR VERIFYING THE LOCATION OF ALL UTILITIES PRIOR TO EXCAVATION. CARE SHOULD BE EXERCISED AT ALL TIMES DURING CONSTRUCTION IN THE VICINITY OF THESE FACILITIES.

GENERAL NOTES

1. ALL ELEVATIONS REFER TO THE MEAN SEA LEVEL DATUM OF THE U.S.C. AND G.S. (N.O.S.) YEAR 1929
2. LOCATIONS, ELEVATIONS, AND DIMENSIONS OF THE EXISTING UTILITIES, STRUCTURES, AND OTHER FEATURES ARE SHOWN ACCORDING TO THE BEST INFORMATION AVAILABLE AT THE TIME OF THE PREPARATION OF THESE PLANS BUT DO NOT PURPORT TO BE ABSOLUTELY CORRECT. THE CONTRACTOR SHALL VERIFY THE LOCATIONS, ELEVATIONS, AND DIMENSIONS PRIOR TO CONSTRUCTION.
3. THE CONTRACTOR SHALL CALL SUNSHINE (1-800-432-4770) AT LEAST 48 HOURS PRIOR TO ANY CONSTRUCTION ACTIVITY.
4. WHEN IN CONFLICT, UTILITY POLES, GAS LINES, UNDERGROUND ELECTRIC AND TELEPHONE CABLES WILL BE RELOCATED BY THE RESPECTIVE UTILITY OWNERS AT THEIR OWN EXPENSE AS DIRECTED BY THE ENGINEER.
5. PRIOR TO ANY CONSTRUCTION, THE CONTRACTOR SHALL NOTIFY THE FOLLOWING:

TAMPA ELECTRIC CO. (TECO)	MS. HEATHER VITRANO	AT 228-4393
CITY SANITATION DEPT.	MR. MIKE DAVIS	AT 274-8936
CITY WATER DEPT.	MR. CHRIS BRDIN	AT 274-8678
GTE (VERIZON)	ARMANDO HERNANDEZ	AT 664-6047
PEOPLES GAS (TECO)	JACK REEVES	AT 275-9762
ATT (TELEPHONE)	BILL MERCER	AT 230-3995
FIRE DEPT DEPUTY CHIEF - HART (HILLS AREA REG. TRANSIT)	TERRY JONES LES WEAKLAND	AT 274-7011 AT 223-6831

6. SPECIAL CARE MUST BE TAKEN TO PROTECT WATER LINES DURING CONSTRUCTION. THE CONTRACTOR SHALL PROVIDE SUPPORTS AS NECESSARY AT NO EXPENSE TO THE CITY.
7. STATIONS AND OFFSETS REFER TO THE SURVEY BASELINE OR TO THE CONSTRUCTION CENTERLINE AS NOTED.
8. STATIONS AND OFFSETS FOR INLETS AND MANHOLES REFER TO THE CENTERPOINT OF THE STRUCTURE. CURB INLETS SHALL BE POSITIONED LONGITUDINALLY ACCORDING TO STATIONING GIVEN AND LATERALLY ACCORDING TO THE APPROPRIATE STANDARD, UNLESS NOTED OTHERWISE. CURB INLET TOP AND THROAT ELEVATIONS SHALL BE BASED ON THE EDGE-OF-PAVEMENT ELEVATION (GIVEN OR CALCULATED) AND THE APPROPRIATE STANDARD. INLET THROAT ELEVATIONS TO BE DETERMINED BY THE CONTRACTOR FROM THE EDGE-OF-PAVEMENT ELEVATION.
9. MANHOLE TOP ELEVATIONS TO BE DETERMINED BY THE CONTRACTOR AS PER PROPOSED STREET GRADES PROVIDED. IF DISTANCE BETWEEN TOP SLAB AND GRADE IS LESS THAN 7", THE CONTRACTOR SHALL PROVIDE INVERTED MANHOLE FRAME AND COVER AT NO ADDITIONAL COST TO THE CITY.
10. ALL CURB RADII, P.I., P.C., AND P.T. REFER TO THE EDGE-OF PAVEMENT UNLESS NOTED OTHERWISE.
11. NO TREES NOR TREE ROOTS SHALL BE REMOVED WITHOUT THE PRIOR APPROVAL OF THE ENGINEER.
12. ALL DISTURBED AREAS SHALL BE SODDED AS DIRECTED BY THE ENGINEER.
13. WHERE CONNECTIONS TO EXISTING WALKS AND DRIVES ARE NOT INDICATED ON THE PLANS, PROPER CONNECTIONS SHALL BE MADE AT THE DIRECTION OF THE ENGINEER.
14. STREET SIGNS, STREET MARKERS, AND R-O-W MARKERS SHALL BE REMOVED AND RELOCATED AS DIRECTED BY THE ENGINEER. NO SEPARATE PAYMENT SHALL BE MADE FOR THESE ACTIVITIES. ANY LOST OR DAMAGED SIGNS OR MARKERS SHALL BE REPLACED BY THE CONTRACTOR AT NO COST TO THE CITY.
15. THE CONTRACTOR SHALL REPLACE EXISTING DRIVEWAYS FROM THE EDGE OF PAVEMENT TO THE R-O-W LINE, WHEREVER AFFECTED BY CONSTRUCTION. MATERIALS SIMILAR TO THE EXISTING SHALL BE USED UNLESS NOTED OTHERWISE OR IN THE CASE OF UNPAVED DRIVEWAYS, A 6" THICK LAYER OF COMPACTED SHELL SHALL BE INSTALLED OR AS SHOWN ON THE PLANS.
16. THE CONTRACTOR IS RESPONSIBLE FOR COMPLIANCE WITH ALL ENVIRONMENTAL RULES AND REGULATIONS OF THE CITY, COUNTY, STATE, TAMPA PORT AUTHORITY, ARMY CORPS OF ENGINEERS, AND ANY OTHER JURISDICTIONAL AGENCIES, AND ALL CONDITIONS SET FORTH IN ENVIRONMENTAL PERMITS.
17. ALL RCP'S AND ERCP'S SHALL BE CONSTRUCTED WITHOUT LIFT-HOLES AND SHALL BE CLASS III UNLESS NOTED OTHERWISE IN THE PLANS.
18. EXISTING SANITARY SEWER LATERALS WHICH ARE TO BE EXTENDED SHALL BE CONSTRUCTED TO AND CONNECTED AT THE PROPERTY LINE, WHILE MAINTAINING CONTINOUS SEWER SERVICE. CLEANOUTS (PLASTIC OR CAST IRON) SHALL BE INCLUDED IN THE PRICE OF THE LATERAL EXTENSIONS AND NO SEPARATE PAYMENT SHALL BE MADE.
19. ALL PIPES UP TO 24" DIA. OR EQUAL SHALL HAVE CLASS "C" BEDDING. MAXIMUM TRENCH WIDTH OF THE PIPE BEDDING SHALL BE EQUAL TO THE OUTSIDE DIAMETER OF THE PIPE BARREL PLUS 2 FEET. PIPES OVER 24" DIA. SHALL HAVE CLASS B BEDDING. REFER TO THE DEPARTMENT OF SANITARY SEWERS STANDARD DETAIL. COST OF STANDARD BEDDING SHALL BE INCLUDED IN THE COST FOR PIPES.
20. REMOVAL OF EXISTING PAVEMENT AND BASE MATERIAL, SIDEWALK, CURB, POLES, UNDERGROUND PIPES, STRUCTURES, FOUNDATIONS, AND OTHER MISCELLANEOUS ITEMS SHALL BE INCLUDED IN THE LUMP SUM PRICE FOR CLEARING AND GRUBBING, AND NO SEPARATE PAYMENT SHALL BE MADE UNLESS SEPARATE BID ITEM IS PROVIDED.
21. THE CONTRACTOR SHALL USE ALL SURPLUS FILL APPROVED AS SUITABLE FROM EXCAVATION PRIOR TO SURPLYING FILL FROM OTHER SOURCES. PAYMENT FOR ADDITIONAL FILL WILL BE MADE ONLY FOR FILL SUPPLIED FROM SOURCES OTHER THAN EXCAVATIONS IN THIS CONTRACT. SEE SPECIFICATIONS FOR MATERIALS REQUIREMENTS.
22. EXISTING PAVEMENT SHALL BE SAWCUT AT THE LIMITS OF PAVEMENT RECONSTRUCTION. SAWCUTTING SHALL BE INCLUDED IN THE COST OF THE OTHER VARIOUS CONTRACT ITEMS AND NO SEPARATE PAYMENT SHALL BE MADE.
23. DISPOSAL OF CONSTRUCTION AND DEMOLITION DEBRIS MAY ONLY OCCUR AT OFFSITE DISPOSAL FACILITIES APPROVED BY THE FLORIDA DEPARTMENT OF ENVIRONMENTAL PROTECTION.
24. BALED HAY OR STRAW BARRIERS AND/OR SILT FENCES MEETING FDOT INDEX #102 SHALL BE USED AS DIRECTED BY THE ENGINEER AS NECESSARY FOR SEDIMENT AND EROSION CONTROL DURING CONSTRUCTION. COST OF EROSION CONTROL SHALL BE INCLUDED IN THE COST OF THE OTHER VARIOUS CONTRACT ITEMS AND NO SEPARATE PAYMENT SHALL BE MADE.
25. CURB-AND-GUTTER ENDINGS SHALL CONFORM TO CITY OF TAMPA DPW STANDARD DRAWING P-3.
26. WHERE SANITARY SEWER HOUSE LATERALS ARE NOT SHOWN ON THE PLANS, NO INFORMATION IS AVAILABLE. CONTRACTOR SHALL VERIFY LOCATIONS OF LATERALS PRIOR TO CONSTRUCTION.
27. MAIL BOXES SHALL BE REMOVED AND RELOCATED AS DIRECTED BY THE ENGINEER. NO SEPARATE PAYMENT SHALL BE MADE FOR THIS ACTIVITY. LOST OR DAMAGED MAIL BOXES SHALL BE REPLACED BY THE CONTRACTOR AT NO COST TO THE CITY.
28. ALL DRAINAGE STRUCTURES SHALL HAVE SELECT BEDDING MATERIAL (12" THICK CRUSHED ROCK) UNDER THE STRUCTURE, UNLESS OTHERWISE NOTED ON THE PLAN OR IN THE SPECIFICATION OR INSTRUCTED BY THE ENGINEER.
29. ALL REINFORCED CONCRETE PIPE (ROUND OR ELLIPTICAL) SHALL BE INSTALLED WITH A NON-WOVEN FILTER FABRIC JACKET AS PER THE DETAIL ON THE CITY OF TAMPA STANDARD DRAWING NUMBER D-13.
30. REFER TO PROJECT SPECIFICATIONS FOR ADDITIONAL INFORMATION AND REQUIREMENTS. COMPLETE CONSTRUCTION DOCUMENTS CONSIST OF PLANS PLUS COMPLETE SPECIFICATIONS (GENERAL PROVISIONS, TECHNICAL SPECIFICATIONS, SPECIFIC PROVISIONS AND ANY ADDENDA), AND CITY AND FDOT STANDARDS, AS APPLICABLE.
31. EXISTING STORMWATER FACILITIES WHICH WILL BE REMOVED FROM SERVICE; INCLUDING PIPES, MANHOLES, MITERED END SECTIONS, ETC.; SHALL BE REMOVED AND NOT ABANDONED IN PLACE.

TRAFFIC CONTROL PLAN GENERAL NOTES

1. LANE CLOSURE RESTRICTIONS FOR SWANN AVENUE HAS BEEN ESTABLISHED AS FOLLOWS: NO LANE(S) MAY BE CLOSED DURING THE HOURS OF 5:30 AM TO 10:30 PM.
2. THE CONTRACTOR SHALL NOTIFY THE ENGINEER A MINIMUM OF 24 HRS IN ADVANCE OF A LANE CLOSURE.
3. THE CONTRACTOR SHALL, AT THE DISCRETION OF THE ENGINEER, OPEN ANY TEMPORARY LANE CLOSURES CAUSING EXTENDED TRAFFIC CONGESTION (5 MINUTES) UNTIL TRAFFIC HAS RETURNED TO AN ACCEPTABLE FLOW AS JUDGED BY THE ENGINEER.
4. THE EXISTING POSTED SPEED SHALL BE MAINTAINED FOR THE DURATION OF THE PROJECT. THE EXISTING POSTED SPEED IS 25 MPH ON SWANN AVENUE.
5. ACCESS TO ADJACENT PROPERTIES SHALL BE MAINTAINED BY THE CONTRACTOR DURING ALL PHASES OF CONSTRUCTION.
6. TEMPORARY TRAVEL LANES SHALL BE A MINIMUM WIDTH OF 10 FT.
7. ALL TEMPORARY SIGNS, PAVEMENT MARKINGS, BARRICADES, WARNING LIGHTS, ETC. NECESSARY FOR THE MAINTENANCE OF TRAFFIC SHALL CONFORM TO THE LATEST EDITIONS OF THE MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES (MUTCD) AND THE FDOT ROADWAY AND TRAFFIC DESIGN STANDARDS.
8. THE CONTRACTOR SHALL PROVIDE UNIFORMED, OFF-DUTY LAW ENFORCEMENT OFFICER(S) WITH A MARKED LAW ENFORCEMENT VEHICLE TO BE USED 2 HOURS IN THE A.M. AND 2 HOURS IN THE P.M. DURING LANE CLOSURE AND SINGLE LANE OPERATION SET-UP AND BREAKDOWN.
9. CONFLICTING OR EXISTING PAVEMENT MARKINGS SHALL BE REMOVED BY GRINDING. ALL EXISTING PAVEMENT MARKINGS WHICH ARE ALTERED SHALL BE REPLACED UPON COMPLETION OF THE PROJECT. COST FOR REMOVAL INCLUDED IN MAINTENANCE OF TRAFFIC. THE REPLACEMENT OF MARKINGS SHALL BE PAID FOR UNDER THE APPROPRIATE BID ITEM.
10. ALL EXISTING STREET SIGNS THAT ARE AFFECTED BY THE PROJECT SHALL BE RELOCATED AND MAINTAINED BY THE CONTRACTOR AT ALL TIMES FOR THE DURATION OF THE PROJECT.
11. VARIABLE MESSAGE BOARDS WILL BE REQUIRED FOR ALL NIGHT WORK. TO BE PAID FOR UNDER A SEPARATE PAY ITEM.
12. THE CONTRACTOR SHALL PROVIDE ANY AND ALL MATERIALS AND EQUIPMENT NEEDED TO MEET THE DROPOFF REQUIREMENTS OF FDOT STANDARD INDEX NO. 600.
13. PEDESTRIAN TRAFFIC IS TO BE MAINTAINED AT ALL TIMES DURING THE CONSTRUCTION PROCESS. THE CONTRACTOR IS RESPONSIBLE FOR INSURING THAT A SAFE, UNOBSTRUCTED ROUTE EXISTS FOR PEDESTRIANS, PER FDOT STANDARD INDEX NO. 660.
14. ALL SIDESTREETS INTERSECTING WITHIN THE PROJECT LIMITS WILL REQUIRE NO LESS THAN A ROAD CONSTRUCTION AHEAD SIGN, INCLUDING LIGHT AND FLAG.
15. AFTER FINAL ASPHALTIC CONCRETE COURSE IS PLACED, APPLY FINAL PAVEMENT MARKINGS AND PLACE PERMANENT RPM'S ON LANE LINES 30 DAYS LATER.
16. TEMPORARY RPM'S SHALL BE INSTALLED WITH ALL TEMPORARY LANE LINES. COST OF REMOVAL SHALL BE INCLUDED IN THE COST OF THE RPM.
17. THE CONTRACTOR WILL BE REQUIRED TO SUBMIT A WRITTEN PLAN WHICH DETAILS EACH ACTIVITY INVOLVED IN THE LANE CLOSURE. THE PLAN SHALL INCLUDE BACK-UP PLANS FOR ACTIVITIES CRITICAL TO RE-OPENING THE LANES TO TRAFFIC. THE BACK-UP PLAN SHALL INCLUDE BACK-UP FOR ALL SUBCONTRACTOR OPERATIONS AS WELL AS THE PRIME CONTRACTOR'S. APPROVAL SHALL BE OBTAINED BY THE ENGINEER PRIOR TO STARTING.
18. NO LANE CLOSURE WILL BE ALLOWED WITHOUT ABSOLUTE ASSURANCE THAT THE PRIME AND SUBCONTRACTORS HAVE PLANNED THE OPERATIONS TO ACHIEVE RE-OPENING ACCORDING TO THE CONTRACT. AN EXAMPLE OF AN ACCEPTABLE BACK-UP PLAN WOULD INCLUDE THE CONTRACTOR CHOOSING TO HAVE TEMPORARY TAPE ON HAND.
19. DURING PERIODS OF LANE CLOSURES, THE CONTRACTOR SHALL PROVIDE A DEDICATED CREW FOR THE INSTALLATION, MAINTENANCE AND REMOVAL OF THE TRAFFIC CONTROL DEVICES (I.E., BARRICADES, SIGNS, ARROW BOARDS, ETC.). THIS CREW SHALL CONSIST OF AT LEAST THREE MEMBERS OF THE CONTRACTOR'S WORK FORCE. WHOSE SOLE RESPONSIBILITY WILL BE THE MAINTENANCE OF TRAFFIC CONTROL. THE CONTRACTOR SHALL FURNISH A WORK VEHICLE TO AID IN MAINTAINING THE CONTROL DEVICE.
20. THE CONTRACTOR SHALL NOTIFY THE FOLLOWING:

HART LINE BUS SERVICE	MR. RALPH LAVARDO	813/623-5835
FIRE DEPARTMENT	TERRY JONES	813/274-7011

WITHIN 48 HOURS OF ANTICIPATED DISRUPTION TO THE NORMAL FLOW OF TRAFFIC, INCLUDING LANE CLOSURES, DETOURS AND SIGNAL WORK.

21. A LANE CLOSURE WILL BE REQUIRED FOR ALL OVERHEAD WORK. A LANE CLOSURE SHALL BE REQUIRED WHENEVER A BOOM ARM OR BUCKET CROSSES A TRAVEL LANE.
22. AT NO TIME SHALL THE CONTRACTOR CLOSE THE ENTIRE ROADWAY OR SIDE STREET.
23. THE CONTRACTOR SHALL NOT CLOSE ANY TWO CONSECUTIVE SIDE STREETS AT A GIVEN TIME.

THE UTILITIES IN THE CROSS SECTIONS ARE SHOWN FROM THE BEST INFORMATION AVAILABLE AT THE TIME OF PLAN PREPARATION. GRAVITY FLOW SANITARY SEWER PIPE AND STORMWATER PIPE INVERTS ARE CALCULATED USING INVERTS TAKEN FROM FIELD SURVEY. WATER LINES, SANITARY SEWER FORCE MAINS, OTHER PRESSURE LINES SUCH AS GAS MAINS, AND FACILITIES SUCH AS POWER, TELEPHONE, OR CABLE TV CONDUIT MAY BE SHOWN IN AN APPROXIMATE LOCATION ONLY. THE CONTRACTOR IS RESPONSIBLE FOR VERIFYING THE LOCATION OF ALL UTILITIES PRIOR TO EXCAVATION. CARE SHOULD BE EXERCISED AT ALL TIMES DURING CONSTRUCTION IN THE VICINITY OF THESE FACILITIES.

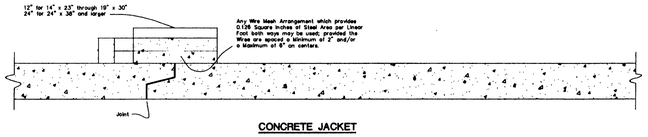
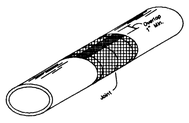
CONCRETE COLLAR FOR EXTENSION OF EXISTING PIPE CULVERTS

PIPE PLUG

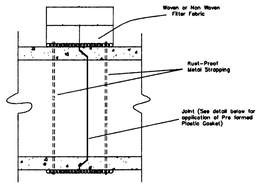
Note: Cost of Masonry Plug Construction and or Removal to be Included in Contract Unit Price for New Pipe.



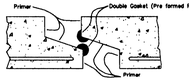
CONCRETE JACKET



ISOMETRIC VIEW



PIPE SECTION



JOINT SECTION (BEFORE PULL-UP)

FILTER FABRIC JACKET

Notes:
1. Only one, either filter fabric or concrete jacket shall be provided at any single joint.
2. Concrete jacket shall be provided at joints where the pipe is not sealed at tail and the pipe is not secured by an end wall. Engineer may specify concrete jacket at other joints if so necessary.
3. Cost of concrete jacket and filter fabric jacket to be included in cost of elliptical pipe culverts.

ELLIPTICAL CONCRETE PIPE JOINTS

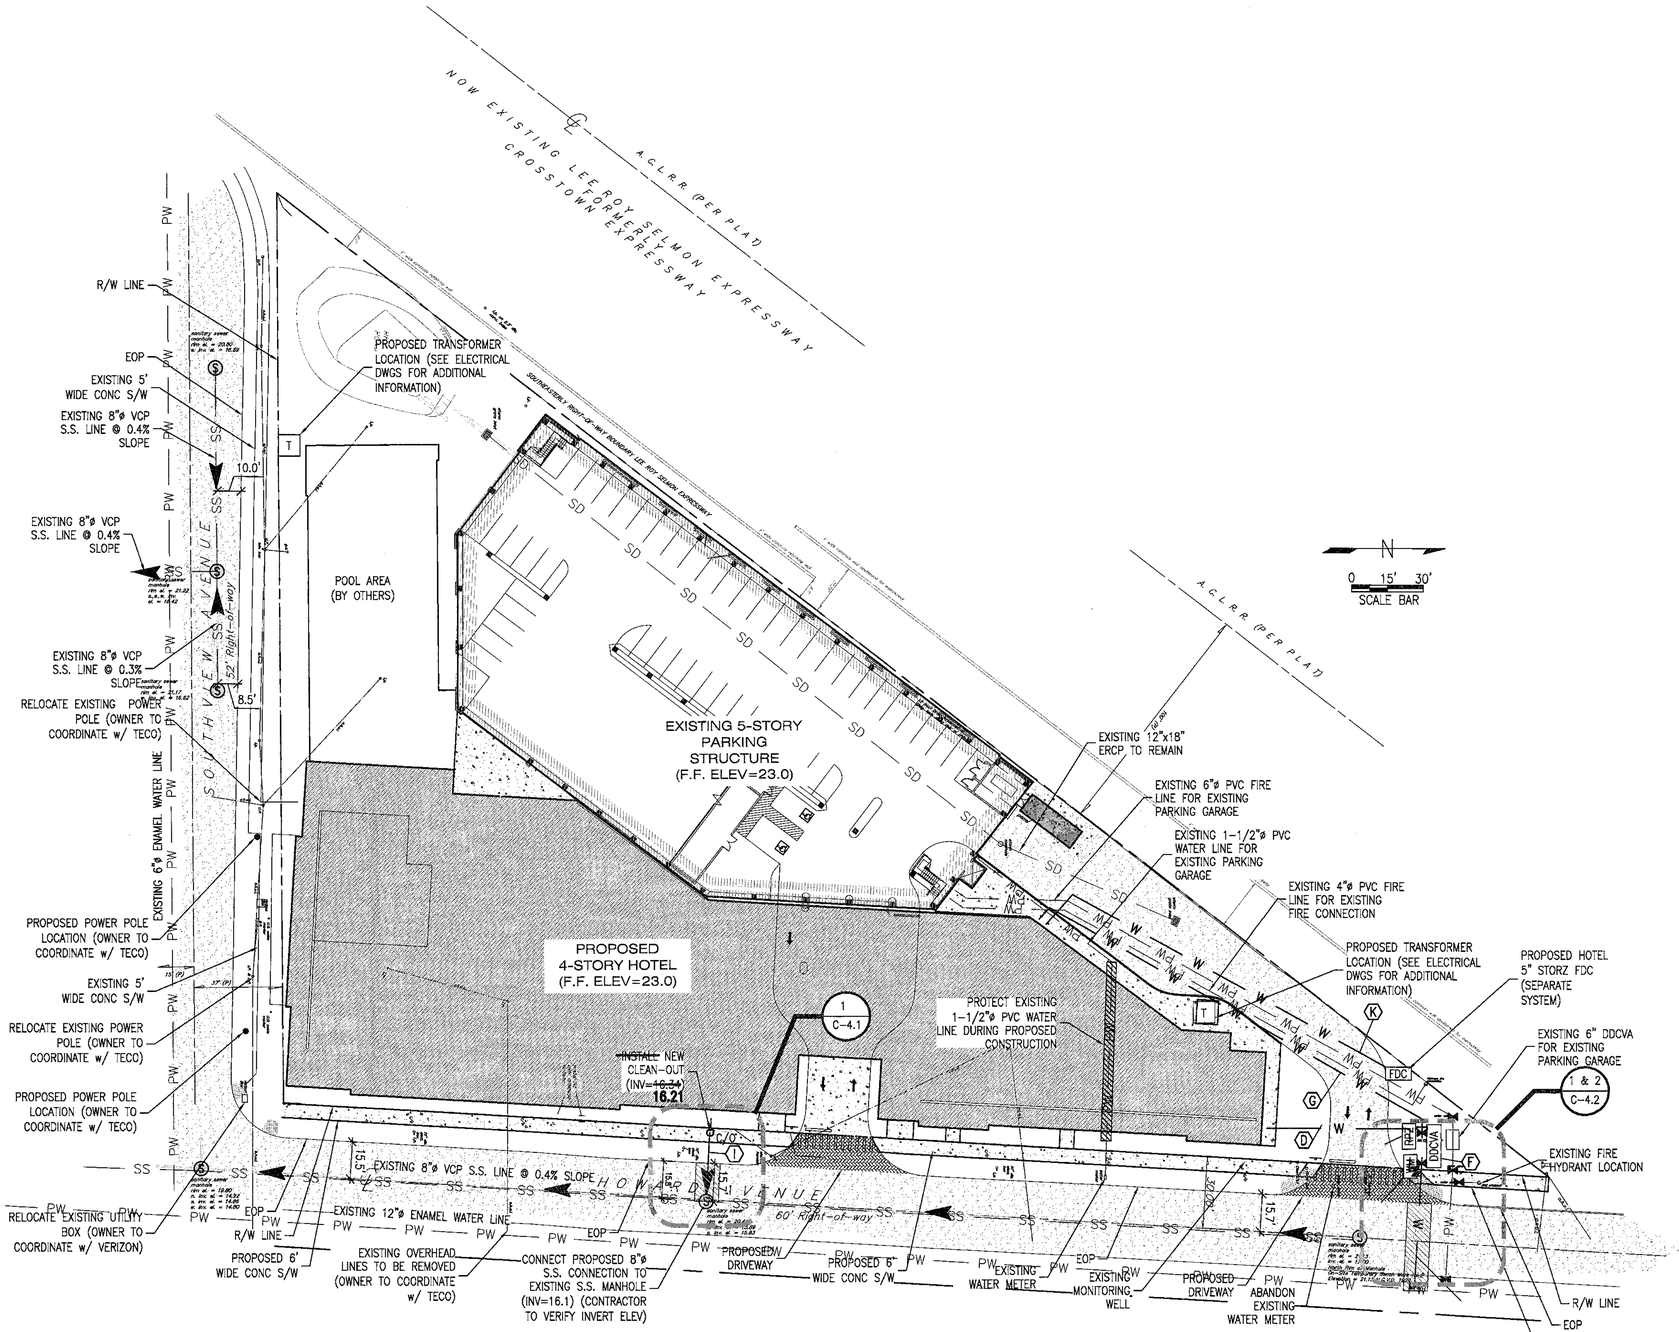
Q.24 Epicurean Utilities Plan



NOTE:
THE CONTRACTOR SHALL RECONSTRUCT THE BENCH IN THE EXISTING MANHOLE TO ACCOMMODATE THE NEW FLOW.

BUILDING SQUARE FOOTAGE: 104.811 SF

ADDRESS: 1207 S. HOWARD AVENUE

FOLIO NUMBER(S): 117665.1202, 117665.1204, 117665.1206, 117665.1210

1 C-4.0 UTILITIES PLAN
1"=30'

UTILITY CONSTRUCTION NOTES

WATER & FIRE

(A) INSTALL NEW 3" DOMESTIC WATER METER (C.O.T. TO PROVIDE & INSTALL) THE CONTRACTOR IS TO FURNISH & INSTALL THE METER BOXES. METER DELIVERY & INSTALLATION TO BE COORDINATED THROUGH T.W.D. INSPECTOR (SEE C.O.T. STANDARD DETAILS 6.06, 6.07 & 6.08)

(B) FURNISH & INSTALL REDUCED PRESSURE ZONE ASSEMBLY (RPZ) IN COMPLIANCE WITH: USC MANUAL EIGHTH EDITION; ASSE STND. 1013; AWWA STND. C511; CSA B64.4. INSTALL AT 12" (MIN) ABOVE GRADE.

(C) NOT USED

(D) FURNISH & INSTALL 65 LF (±) OF 4"ø PVC (PER ASTM D22 41 (LATEST REVISION), CLASS 1120 OR CLASS 1220 (SDR 21), AWWA C-900) WATER LINE (BLUE P.E. TUBING). CONNECT TO RPZ AND TO BUILDING'S PLUMBING SYSTEM.

(E) FURNISH & INSTALL 48 LF (±) OF 8"ø D.I.P. & CONNECT TO 8" DDCVA (DOUBLE DETECTOR CHECK VALVE ASSEMBLY) (SEE SHEET C-4.2 FOR ADDITIONAL INFORMATION)

(F) FURNISH & INSTALL NEW 8" DDCVA (DOUBLE DETECTOR CHECK VALVE ASSEMBLY) (SEE C.O.T. STANDARD DETAILS 6.06, 6.07 & 6.08) (SEE SHEET C-4.2 FOR ADDITIONAL INFORMATION)

(G) INSTALL 180 LF (±) (TOTAL) 6"ø CPVC FIRELINE (PRIVATE SIDE). CONNECT TO DDCVA & RISER

(H) DENOTES FIRE SPRINKLER RISER (SEE FIRE SPRINKLER SYSTEM DRAWINGS FOR ADDITIONAL INFORMATION)

(K) FURNISH & INSTALL 170 LF (±) (TOTAL) 4"ø CPVC FIRELINE (PRIVATE SIDE). CONNECT TO RISER & PROPOSED 5" STORZ FDC

SANITARY SEWER

(I) ~~FURNISH & INSTALL~~ 30 LF (±) OF 8"ø PVC (PER ASTM D 3034, SDR 35 OR SDR 26) SS LINE (COLOR CODED GREEN) @ ~~0.6%~~ **0.4%** SLOPE (MIN) CONNECT TO PROPOSED CLEAN-OUT & EXISTING SS MANHOLE

(J) NOT USED

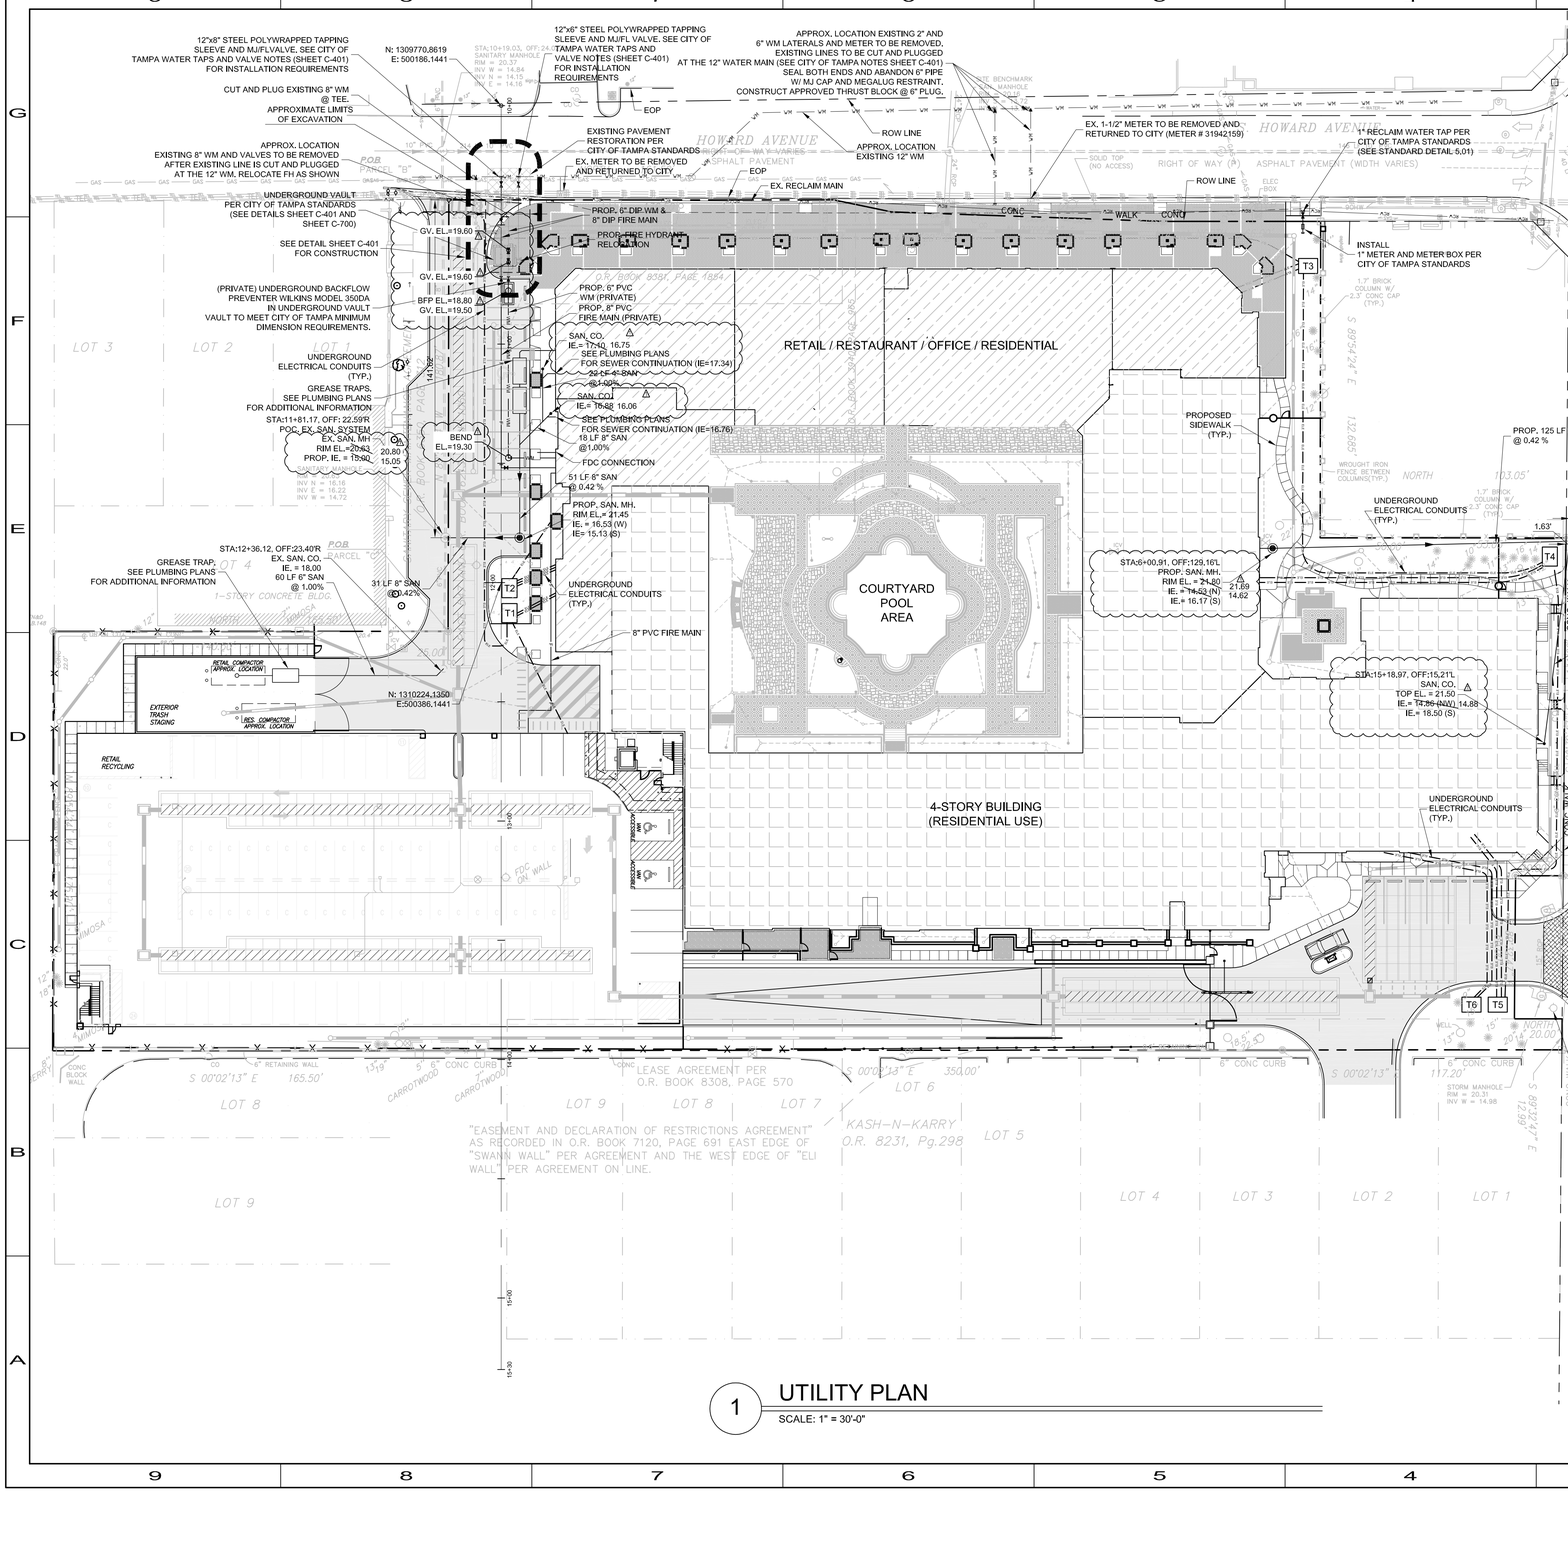
Q.25 SOHO Square Apartments



NOTES

1. AT LEAST 3 WEEKS PRIOR TO ANY CONSTRUCTION, THE DEVELOPER'S REPRESENTATIVE SHALL CONTACT ALEX GONZALEZ OF THE WASTEWATER PLANNING DIVISION, 306 E. JACKSON STREET, TAMPA, FLORIDA 33602 (PHONE 813-274-12930, AND SUPPLY HIM WITH FURTHER CONSTRUCTION INFORMATION. THIS INFORMATION SHOULD INCLUDE ALL REQUIRED SHOP DRAWINGS, THE CONTRACTOR'S NAME, STARTING DATE, PROJECTED SCHEDULE, AND OTHER INFORMATION REQUIRED BY THE PLANNING DIVISION. THE PLANNING DIVISION OFFICE MUST ALSO BE CONTACTED BY TELEPHONE FIVE DAYS PRIOR TO THE ACTUAL START OF FIELD OPERATIONS IN ORDER TO ENSURE AVAILABILITY OF INSPECTION PERSONNEL. IT IS IMPERATIVE THAT YOUR CONTRACTOR BE FULLY INFORMED OF THE NOTIFICATION AND SUBMITTAL REQUIREMENTS. FAILURE TO COMPLY WITH THESE REQUIREMENTS WILL DELAY THE APPROVAL AND ACCEPTANCE OF THE CONSTRUCTED FACILITIES AND THE RELEASE OF THE CERTIFICATE OF OCCUPANCY FOR THE PROJECT.
2. ALL AREAS OF DISTURBED SOILS SHALL BE RESTORED TO PREVIOUS EXISTING CONDITIONS.
3. NO REMOVALS ARE TO BE MADE UNTIL THE REPLACEMENT SERVICES (IF ANY) ARE IN PLACE AND OPERATIONAL.
4. THE LOCATION OF ELECTRICAL UNDERGROUND LINES SHOWN ARE APPROXIMATE. CONTRACTOR SHALL FIELD VERIFY ALL LOCATIONS PRIOR TO REMOVAL / RELOCATION. REFER TO ELECTRICAL PLANS FOR ADDITIONAL INFORMATION AND SPECIFICATIONS.
5. CONTRACTOR SHALL COORDINATE WITH TECO FOR RELOCATION OF TECO GAS AND TECO ELECTRIC LINES.

WATER SYSTEM TESTING REQUIREMENTS
(FOR PUBLIC WATER FACILITIES CONSTRUCTED FOR THE CITY)

1. ALL COMPONENTS OF THE WATER SYSTEM, INCLUDING FITTINGS, HYDRANTS, CONNECTIONS, AND VALVES SHALL BE PROPERLY PRESSURE TESTED AND ACCEPTED BY THE OWNER'S ENGINEER AND THE CITY. PRESSURE TESTS TO BE PERFORMED IN ACCORDANCE WITH WATER DEPARTMENT SPECIFICATIONS. CONTRACTOR TO NOTIFY OWNER'S ENGINEER AND CITY INSPECTOR A MINIMUM 3 WORKING DAYS IN ADVANCE OF PERFORMING TESTS.
2. CONTRACTOR SHALL PRESSURE TEST WATER MAINS AT 150 PSI FOR A PERIOD OF 2 HOURS IN ACCORDANCE WITH AWWA C600–87 STANDARDS. THE CONTRACTOR SHALL MAKE ALL NECESSARY APPLICATIONS AND ARRANGEMENTS.
3. CONTRACTOR TO PERFORM CHLORINATION AND COORDINATE BACTERIOLOGICAL SAMPLING WITH THE CITY OF TAMPA CONSTRUCTION INSPECTION SECTION IN ACCORDANCE WITH TAMPA WATER DEPARTMENT TECHNICAL MANUAL AND AWWA SPECIFICATION C651. CONTRACTOR TO OBTAIN SAMPLE CLEARANCE ON PUBLIC DOMESTIC WATER SYSTEM.
4. ALL TEST POINTS AND CHLORINATION POINTS PIPING SHALL BE COMPLETELY REMOVED PRIOR TO FINAL ACCEPTANCE. THE CORPORATION STOP SHALL BE REMOVED AND THE MAIN PLUGGED AFTER OPERATION (SEE CITY OF TAMPA STANDARD DETAIL 2.17).

"PUBLIC WATER" CONSTRUCTION NOTES

1. RESTRAIN ALL DIP WATER MAIN JOINTS FROM TAP TO TEMPORARY CAPS.
2. ALL BELOW GROUND DIP WATER MAINS AND FITTINGS TO BE POLYWRAPPED.
3. ALL TEE VALVE STEMS AND ALL VALVE STEMS ON PIPES TO BE PERPENDICULAR TO GRADE SHOWN.
4. WATER MAIN TAP TO BE PERFORMED BY COT WATER DEPARTMENT PERSONNEL ONLY. CONTRACTOR SHALL EXCAVATE, FURNISH AND INSTALL APPROVED TAPPING SLEEVE AND CONDUCT PRESSURE TEST OF SLEEVE (TO BE WITNESSED BY COT). CITY TO PERFORM ACTUAL TAP. CONTACT GREG CUNNINGHAM, COT CONTRACT ADMINISTRATION DEPARTMENT, AT 326–1010, M–TR, TEN (10) WORKING DAYS MINIMUM PRIOR TO INTENDED CONNECTIONS.
5. ALL DEVELOPER INSTALLED FACILITIES DESIGNED TO BE CITY OWNED SHALL BE TRANSFERRED TO THE CITY FOR OWNERSHIP AND MAINTENANCE PRIOR TO ACTIVATION OF CITY WATER SERVICE FOR CUSTOMER.
6. WATER SERVICE TO BE PROVIDED BY CITY OF TAMPA WATER DEPARTMENT.
7. ALL WATER WORK FOR THE CITY SHALL BE PERFORMED IN ACCORDANCE WITH THE TAMPA WATER DEPARTMENT TECHNICAL MANUAL, LATEST EDITION, AND WITH ALL CONSTRUCTION DETAILS THEREIN. THE DETAILS AND STANDARDS DESCRIBED ABOVE SHALL BE CONSIDERED TO BE A PART OF THE CONTRACT DOCUMENTS FOR THIS PROJECT.
8. PRIOR TO PRE–CONSTRUCTION MEETING WITH WATER DEPARTMENT, CONTRACTOR SHALL OBTAIN THE CURRENT "TAMPA WATER DEPARTMENT TECHNICAL MANUAL." ALL DEVELOPER INSTALLED CONSTRUCTION, MATERIALS AND WORKMANSHIP ARE TO CONFORM WITH THE LATEST CITY OF TAMPA SPECIFICATIONS, AS OUTLINED IN THE TECHNICAL MANUAL.
9. CONSTRUCTION OF ANY WATER INSTALLATIONS TO BE CITY–OWNED SHALL BE COORDINATED WITH THE WATER DEPARTMENT PRIOR TO THE START OF CONSTRUCTION. ENGINEER OR CONTRACTOR SHALL CONTACT GREG CUNNINGHAM, COT CONTRACT ADMINISTRATION DEPARTMENT, AT 326–1010, M–TR ABOUT SCHEDULING A PRE–CONSTRUCTION MEETING WITH THE CITY, FOR REVIEW OF INSTALLATION TECHNIQUES AND PROCEDURES, A MINIMUM OF 10 WORKING DAYS PRIOR TO CONSTRUCTION.
10. CONCRETE THRUST BLOCKS SHALL NOT BE USED FOR THRUST RESTRAINT. RESTRAINT OF PUSH–ON DUCTILE IRON PIPE JOINTS, OTHER THAN FOR FITTINGS, SHALL BE WITH APPROVED GASKET–TYPE ("GRIPPER") RESTRAINT DEVICES SUCH AS AMERICAN "FAST–GRIP" OR U.S. PIPE "FIELD–LOK" GASKETS.
11. CONNECTIONS TO EXISTING WATER DISTRIBUTION SYSTEM SHALL BE MADE IN SUCH THAT CURRENT WATER CUSTOMERS SERVED FROM ADJACENT MAINS SHALL NOT BE TAKEN OUT OF SERVICE.
12. VALVES ON EXISTING PUBLIC WATER MAINS MAY BE OPERATED BY CITY PERSONNEL ONLY.
13. BENDS SHALL BE INSTALLED ON DIP WATER MAIN, AS NECESSARY, TO MAINTAIN PROPER ALIGNMENT. DIP JOINT DEFLECTION SHALL BE IN ACCORDANCE WITH AWWA C–600, LATEST EDITION, EXCEPT DEFLECTION ALLOWED SHALL BE LESS THAN 80% OF THE DEFLECTION VALUES GIVEN IN THE AWWA DEFLECTION TABLES.
14. CLEARANCE BETWEEN ALL TREES AND WATER MAINS SHALL MEET CITY OF TAMPA PARKS DEPARTMENTS LATEST REQUIREMENTS. NO TREE SHALL BE PLANTED WITHIN 10 FEET OF INSTALLED OR EXISTING WATER MAINS.
15. ALL WATER MAINS SHALL HAVE A MINIMUM COVER OF 36 INCHES UNLESS OTHERWISE NOTED.
16. ALL WATERMAINS SHALL BE CONSTRUCTED IN A MANNER SUCH AS TO MAINTAIN A MINIMUM OF 3 FEET HORIZONTAL SEPARATION FROM OTHER UTILITIES, EXCEPT STORM, SANITARY AND GAS.

TOPOGRAPHIC SURVEY
S. HOWARD AVE., W. SWANN AVE. TO W. MORRISON AVE.

DATE OF FIELD SURVEY 9-23-15

PREPARED FOR: CITY OF TAMPA, STORMWATER DEPARTMENT

SURVEYOR'S CERTIFICATE
I hereby certify that the survey shown hereon was performed under my RESPONSIBLE CHARGE on the date shown, and meets the MINIMUM TECHNICAL STANDARDS set forth by the FLORIDA BOARD OF PROFESSIONAL SURVEYORS & MAPPERS in Chapter 5J-17, FLORIDA ADMINISTRATIVE CODE PURSUANT TO SECTION 472.027, FLORIDA STATUTES.
NOT VALID WITHOUT THE SIGNATURE AND ORIGINAL RAISED SEAL OF A FLORIDA LICENSED SURVEYOR AND MAPPER.

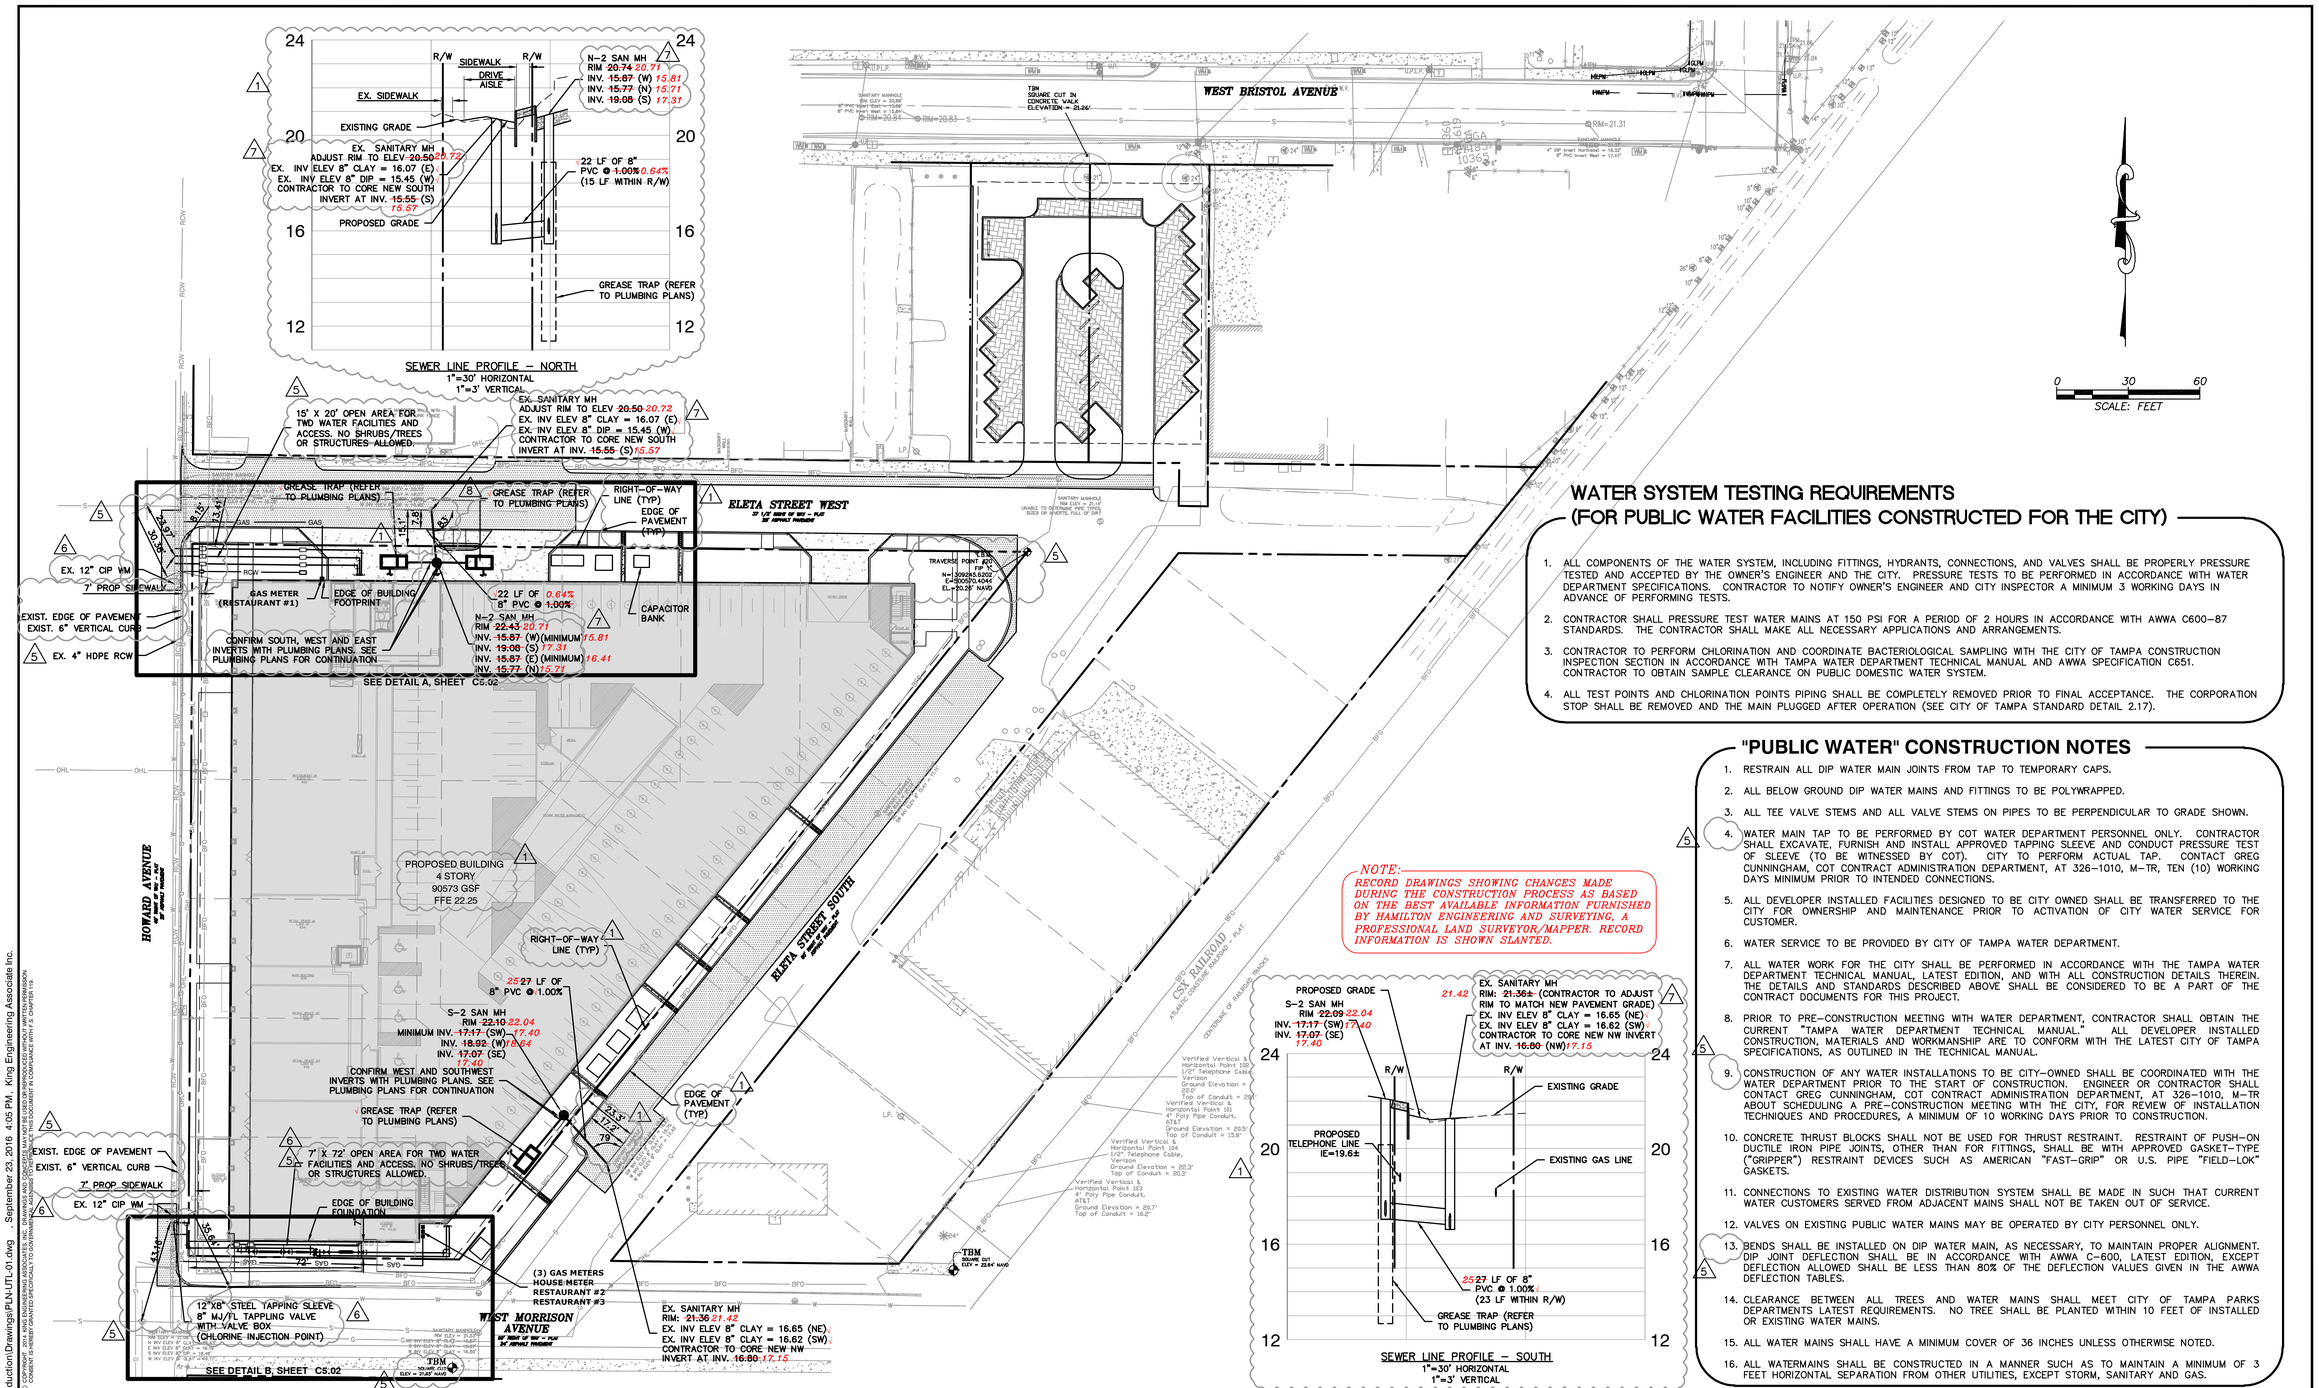
Q.27 Howard Ave Mixed Use – Sanitary Sewer and Water Distribution Plan



WATER SYSTEM TESTING REQUIREMENTS
(FOR PUBLIC WATER FACILITIES CONSTRUCTED FOR THE CITY)

1. ALL COMPONENTS OF THE WATER SYSTEM, INCLUDING FITTINGS, HYDRANTS, CONNECTIONS, AND VALVES SHALL BE PROPERLY PRESSURE TESTED AND ACCEPTED BY THE OWNER'S ENGINEER AND THE CITY. PRESSURE TESTS TO BE PERFORMED IN ACCORDANCE WITH WATER DEPARTMENT SPECIFICATIONS. CONTRACTOR TO NOTIFY OWNER'S ENGINEER AND CITY INSPECTOR A MINIMUM 3 WORKING DAYS IN ADVANCE OF PERFORMING TESTS.
2. CONTRACTOR SHALL PRESSURE TEST WATER MAINS AT 150 PSI FOR A PERIOD OF 2 HOURS IN ACCORDANCE WITH AWWA C600–87 STANDARDS. THE CONTRACTOR SHALL MAKE ALL NECESSARY APPLICATIONS AND ARRANGEMENTS.
3. CONTRACTOR TO PERFORM CHLORINATION AND COORDINATE BACTERIOLOGICAL SAMPLING WITH THE CITY OF TAMPA CONSTRUCTION INSPECTION SECTION IN ACCORDANCE WITH TAMPA WATER DEPARTMENT TECHNICAL MANUAL AND AWWA SPECIFICATION C651. CONTRACTOR TO OBTAIN SAMPLE CLEARANCE ON PUBLIC DOMESTIC WATER SYSTEM.
4. ALL TEST POINTS AND CHLORINATION POINTS PIPING SHALL BE COMPLETELY REMOVED PRIOR TO FINAL ACCEPTANCE. THE CORPORATION STOP SHALL BE REMOVED AND THE MAIN PLUGGED AFTER OPERATION (SEE CITY OF TAMPA STANDARD DETAIL 2.17).

"PUBLIC WATER" CONSTRUCTION NOTES

1. RESTRAIN ALL DIP WATER MAIN JOINTS FROM TAP TO TEMPORARY CAPS.
2. ALL BELOW GROUND DIP WATER MAINS AND FITTINGS TO BE POLYWRAPPED.
3. ALL TEE VALVE STEMS AND ALL VALVE STEMS ON PIPES TO BE PERPENDICULAR TO GRADE SHOWN.
4. WATER MAIN TAP TO BE PERFORMED BY COT WATER DEPARTMENT PERSONNEL ONLY. CONTRACTOR SHALL EXCAVATE, FURNISH AND INSTALL APPROVED TAPPING SLEEVE AND CONDUCT PRESSURE TEST OF SLEEVE (TO BE WITNESSED BY COT). CITY TO PERFORM ACTUAL TAP. CONTACT GREG CUNNINGHAM, COT CONTRACT ADMINISTRATION DEPARTMENT, AT 326–1010, M–TR, TEN (10) WORKING DAYS MINIMUM PRIOR TO INTENDED CONNECTIONS.
5. ALL DEVELOPER INSTALLED FACILITIES DESIGNED TO BE CITY OWNED SHALL BE TRANSFERRED TO THE CITY FOR OWNERSHIP AND MAINTENANCE PRIOR TO ACTIVATION OF CITY WATER SERVICE FOR CUSTOMER.
6. WATER SERVICE TO BE PROVIDED BY CITY OF TAMPA WATER DEPARTMENT.
7. ALL WATER WORK FOR THE CITY SHALL BE PERFORMED IN ACCORDANCE WITH THE TAMPA WATER DEPARTMENT TECHNICAL MANUAL, LATEST EDITION, AND WITH ALL CONSTRUCTION DETAILS THEREIN. THE DETAILS AND STANDARDS DESCRIBED ABOVE SHALL BE CONSIDERED TO BE A PART OF THE CONTRACT DOCUMENTS FOR THIS PROJECT.
8. PRIOR TO PRE–CONSTRUCTION MEETING WITH WATER DEPARTMENT, CONTRACTOR SHALL OBTAIN THE CURRENT "TAMPA WATER DEPARTMENT TECHNICAL MANUAL." ALL DEVELOPER INSTALLED CONSTRUCTION, MATERIALS AND WORKMANSHIP ARE TO CONFORM WITH THE LATEST CITY OF TAMPA SPECIFICATIONS, AS OUTLINED IN THE TECHNICAL MANUAL.
9. CONSTRUCTION OF ANY WATER INSTALLATIONS TO BE CITY–OWNED SHALL BE COORDINATED WITH THE WATER DEPARTMENT PRIOR TO THE START OF CONSTRUCTION. ENGINEER OR CONTRACTOR SHALL CONTACT GREG CUNNINGHAM, COT CONTRACT ADMINISTRATION DEPARTMENT, AT 326–1010, M–TR ABOUT SCHEDULING A PRE–CONSTRUCTION MEETING WITH THE CITY, FOR REVIEW OF INSTALLATION TECHNIQUES AND PROCEDURES, A MINIMUM OF 10 WORKING DAYS PRIOR TO CONSTRUCTION.
10. CONCRETE THRUST BLOCKS SHALL NOT BE USED FOR THRUST RESTRAINT. RESTRAINT OF PUSH–ON DUCTILE IRON PIPE JOINTS, OTHER THAN FOR FITTINGS, SHALL BE WITH APPROVED GASKET–TYPE ("GRIPPER") RESTRAINT DEVICES SUCH AS AMERICAN "FAST–GRIP" OR U.S. PIPE "FIELD–LOK" GASKETS.
11. CONNECTIONS TO EXISTING WATER DISTRIBUTION SYSTEM SHALL BE MADE IN SUCH THAT CURRENT WATER CUSTOMERS SERVED FROM ADJACENT MAINS SHALL NOT BE TAKEN OUT OF SERVICE.
12. VALVES ON EXISTING PUBLIC WATER MAINS MAY BE OPERATED BY CITY PERSONNEL ONLY.
13. BENDS SHALL BE INSTALLED ON DIP WATER MAIN, AS NECESSARY, TO MAINTAIN PROPER ALIGNMENT. DIP JOINT DEFLECTION SHALL BE IN ACCORDANCE WITH AWWA C–600, LATEST EDITION, EXCEPT DEFLECTION ALLOWED SHALL BE LESS THAN 80% OF THE DEFLECTION VALUES GIVEN IN THE AWWA DEFLECTION TABLES.
14. CLEARANCE BETWEEN ALL TREES AND WATER MAINS SHALL MEET CITY OF TAMPA PARKS DEPARTMENTS LATEST REQUIREMENTS. NO TREE SHALL BE PLANTED WITHIN 10 FEET OF INSTALLED OR EXISTING WATER MAINS.
15. ALL WATER MAINS SHALL HAVE A MINIMUM COVER OF 36 INCHES UNLESS OTHERWISE NOTED.
16. ALL WATERMAINS SHALL BE CONSTRUCTED IN A MANNER SUCH AS TO MAINTAIN A MINIMUM OF 3 FEET HORIZONTAL SEPARATION FROM OTHER UTILITIES, EXCEPT STORM, SANITARY AND GAS.

SW 2017-01

SURVEYOR'S REPORT

TYPE OF SURVEY:
AS-BUILT SURVEY
FOR HOWARD AVENUE FLOODING RELIEF, CITY OF TAMPA, FLORIDA

MAP OF SURVEY:
THE SURVEY MAP AND REPORT ARE NOT FULL AND COMPLETE WITHOUT THE OTHER.
SEE MAP OF SURVEY SHEETS 01 OF 08 THRU SHEETS 08 OF 08.

LEGAL DESCRIPTION:
NOT APPLICABLE.

ACCURACY:
1. ALL MEASUREMENTS, DISTANCES, ELEVATIONS AND FEATURES WERE PERFORMED IN STRICT ACCORDANCE WITH THE STANDARDS OF PRACTICE SET FORTH IN CHAPTER 5J-17 PURSUANT TO SECTION 427.027 FLORIDA STATUTES.

2. METHODS FOR ALL CONTROL MEASUREMENTS WERE MADE WITH A TRANSIT AND STEEL TAPE, OR DEVICES WITH EQUIVALENT OR HIGHER DEGREES OF ACCURACY.

3. THE ACCURACY STANDARD USED FOR THIS SURVEY, AS CLASSIFIED IN THE STANDARDS OF PRACTICE 5J-17 F.A.C., IS "COMMERCIAL HIGH RISK". THE MINIMUM RELATIVE DISTANCE ACCURACY FOR THIS TYPE OF SURVEY IS 1 FOOT IN 10,000 FEET. THIS SURVEY IS BASED ON REPETITIVE RTK GPS AND/ OR ROBOTIC TOTAL STATION OBSERVATIONS ON MULTIPLE PROJECT HORIZONTAL AND VERTICAL CONTROL POINTS TO OBTAIN A REDUNDANCY OF MEASUREMENT. THE HORIZONTAL AND VERTICAL CLOSURE ACHIEVED FOR THIS SURVEY, EXCEEDED THE MINIMUM ACCURACY REQUIREMENTS.

DATA SOURCES:
1. CONSTRUCTION PLANS "HOWARD AVENUE FLOODING RELIEF" PREPARED BY CITY OF TAMPA DEPARTMENT OF TRANSPORTATION AND STORMWATER SERVICES, TELEPHONE NO. (813) 274-8333, DATED 12-15-16, WERE UTILIZED IN THE PREPARATION OF THIS SURVEY.

2. ALL ELEVATIONS SHOWN HEREON ARE IN FEET AND ARE BASED ON NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD 88). PARENT BENCHMARK, HILLSBOROUGH COUNTY BENCHMARK "VA-922" HAVING AN ELEVATION OF 20.68 FEET. (DATA SOURCES 1).

3. BEARINGS AND COORDINATES SHOWN HERE ON AND ON THE MAP OF SURVEY ARE IN FEET AND NOT REFERENCED TO A PUBLISHED COORDINATE SYSTEM (ASSUMED) (DATA SOURCES 1).

4. ONSITE HORIZONTAL AND VERTICAL CONTROL POINTS UTILIZED FOR THIS SURVEY: CONTROL POINT 1, FOUND NAIL AND DISK "NO ID" NORTHING 1307591.32 FEET, EASTING 500156.76 FEET, ELEVATION = 19.04 FEET AND CONTROL POINT 2, FOUND NAIL AND DISK "NO ID", NORTHING 1307949.70 FEET, EASTING 500133.12 FEET, ELEVATION = 21.43 FEET, THE BASIS OF BEARING BEING N.03°46'22"W. BETWEEN SAID CONTROL POINTS 1 AND 2 (DATA SOURCES 1).

LIMITATIONS:
1. PURPOSE OF SURVEY: TO OBTAIN HORIZONTAL AND VERTICAL DIMENSIONAL DATA SO THAT CONSTRUCTED IMPROVEMENTS MAY BE LOCATED AND DELINEATED.

2. LAST FIELD DATE OF SURVEY: 08/03/2017 AS SHOWN IN FIELD BOOK 526, PAGES 10 AND 11.

3. THE SCREENED INFORMATION SHOWN ON THE MAP OF SURVEY IS PER PLAN (DATA SOURCES 1) AND FOR COMPARISON PURPOSES ONLY AND IS NOT A PART OF THE AS-BUILT INFORMATION. THE **BOLD DARK PRINT AND LINE WORK** SHOWN HERE ON IS AS-BUILT INFORMATION PREPARED BY FERGUSON LAND SURVEYORS, PLLC.

4. THIS IS NOT A BOUNDARY OR RIGHT-OF-WAY SURVEY.

5. PRINTED DIMENSIONS SHOWN ON THE SURVEY SUPERSEDE SCALED DIMENSIONS. THERE MAY BE ITEMS DRAWN OUT OF SCALE TO GRAPHICALLY SHOW THEIR LOCATION.

6. USE OF THIS SURVEY BY ANYONE OTHER THAN THOSE PREPARED FOR OR CERTIFIED TO, WILL BE THE RE-USERS SOLE RISK WITHOUT LIABILITY TO THE SURVEYOR.

7. SHOWN ANYWHERE ON THIS SURVEY, THE WORD "CERTIFY" IS UNDERSTOOD TO BE AN EXPRESSION OF A PROFESSIONAL OPINION BASED UPON THE SURVEYOR'S BEST KNOWLEDGE, INFORMATION AND BELIEF, AND THAT IT CONSTITUTES NEITHER A GUARANTEE NOR A WARRANTY.

BOUNDARY INCONSISTENCIES:
NOT APPLICABLE.

EASEMENTS/RIGHT-OF-WAY:
NOT APPLICABLE.

(IN FEET)
1 inch = 20 ft.

NOTES:
1. NO UNDERGROUND INSTALLATIONS OR IMPROVEMENTS HAVE BEEN LOCATED EXCEPT AS SHOWN.
2. NO INSTRUMENTS OF RECORD REFLECTING EASEMENTS, RIGHT OF WAY AND/OR OWNERSHIP WERE FURNISHED TO THIS SURVEYOR EXCEPT AS SHOWN.
3. THIS SURVEY DOES NOT REFLECT OR DETERMINE OWNERSHIP.
4. USE OF THIS SURVEY BY ANYONE OTHER THAN THOSE PREPARED FOR WILL BE THE RE-USERS SOLE RISK WITHOUT LIABILITY TO THE SURVEYOR.
5. THERE MAY BE ITEMS DRAWN OUT OF SCALE TO GRAPHICALLY SHOW THEIR LOCATION.
6. THE SURVEY WAS PREPARED WITHOUT THE BENEFIT OF A CURRENT TITLE COMMITMENT AND IS SUBJECT TO EASEMENTS, RIGHTS-OF-WAY AND SIMILAR MATTERS OF TITLE.
7. NOT VALID WITHOUT THE SIGNATURE AND THE ORIGINAL RAISED SEAL OF A FLORIDA LICENSED SURVEYOR AND MAPPER.
8. THE HORIZONTAL DATUM IS TIED TO THE FLORIDA STATE PLANE COORDINATE SYSTEM (GRID), WEST ZONE NORTH AMERICAN DATUM 1983, ADJUSTMENT 2011.
9. ELEVATIONS SHOWN HEREON ARE IN FEET AND REFER TO THE NORTH AMERICAN VERTICAL DATUM OF 1988. (N.A.V.D.) REFERENCE BENCHMARK No.1: HV-02 0136 ELEVATION = 4.635', REFERENCE BENCHMARK No.2: HV-02 0134 ELEVATION = 20.240'
10. THIS SURVEY IS FOR TOPOGRAPHIC PURPOSES AND IS NOT A BOUNDARY SURVEY.
11. BEARINGS AND DISTANCES ARE MEASURED UNLESS OTHERWISE NOTED.
12. BASIS OF BEARING IS GRID NORTH.
